

Module description

for the degree programme

Master of Science Computational
and Applied Mathematics

(Version of examination regulation: 20192)

for the summer term 2024

flat version (only modules, no levels
(Konten)), in alphabetical order

Table of contents

Advanced algorithms for nonlinear optimization (65916).....	4
Advanced discretization techniques (65900).....	5
Advanced nonlinear optimization (65920).....	7
Advanced solution techniques (65901).....	8
Analysis of free-boundary problems in continuum mechanics (65997).....	10
Architectures of supercomputers (44460).....	11
Conic optimisation and applications (65862).....	13
Control, machine learning and numerics (65093).....	15
Discrete optimization I (65917).....	17
Discrete optimization II (65933).....	18
Discrete optimization III (65910).....	20
Efficient discretization of two-phase flow (65083).....	22
Elective modules (as selected from FAU-modules) (1500).....	23
Introduction to material- and shape optimization (65915).....	24
Inverse Problems (65928).....	25
Lecture series: Partial differential equations, control and numerics (PdeConNum) (65700).....	26
Master`s seminar MApA (65885).....	27
Master's seminar NASi (65890).....	28
Master's thesis (1999).....	29
Master seminar Opti (65895).....	30
Mathematical Image Processing (48241).....	31
Mathematical modeling in the life sciences (65911).....	33
Mathematics of learning (65785).....	34
Mathematics of multiscale models (65906).....	35
Modeling, simulation and optimization (65870).....	36
Modeling and analysis in continuum mechanics I (65860).....	37
Modeling and analysis in continuum mechanics II (65865).....	38
Module: Conservation laws (65887).....	40
Navier stokes equations (65888).....	42
Numerical aspects of linear and integer programming (65919).....	44
Numerics of incompressible flows I (65904).....	45
Numerics of incompressible flows II (65905).....	47
Numerics of partial differential equations (65993).....	49
Numerics of partial differential equations II (65999).....	51
Numerics of stochastic evolution equations (65908).....	53
Optimization in industry and economy (65923).....	54
Optimization with partial differential equations (65921).....	56
Partial differential equations in finance (65914).....	57
Polynomial Optimization and Application (65877).....	59
Practical course on finite element methods for phase separation equations (65095).....	61
Practical course on finite element methods for phase-separation equations (65863).....	62
Programming techniques for supercomputers in CAM (65875).....	63
Project seminar optimization (65924).....	65
Robust optimization II (65918).....	66
Scalar conservation laws (65089).....	67
Selected topics in mathematics of learning (65789).....	70
Seminar: Applied analysis (65787).....	71
Seminar: Evolution equations (65071).....	72
Seminar Selected Topics of Applied Analysis (65096).....	73

Stochastic analysis (65970).....	75
Subspace correction methods (65909).....	76
Optimal control theory (65959).....	78
Theory of stochastic evolution equations (65907).....	79
Transport and reaction in porous media: Modelling (65902).....	81
Transport and reaction in porous media: Simulation (65903).....	83
Wave phenomena (65068).....	85

1	Module name 65916	Advanced algorithms for nonlinear optimization	5 ECTS
2	Courses / lectures	The teaching units in the module are only offered in the winter semester.	
3	Lehrende	-	

4	Module coordinator	Prof. Dr. Michael Stingl	
5	Contents	Several of the following topics: <ul style="list-style-type: none"> • Trust region methods • Iterative methods in the presence of noisy data • Interior point methods for nonlinear problems • Modified barrier and augmented Lagrangian methods • Local and global convergence analysis 	
6	Learning objectives and skills	Students <ul style="list-style-type: none"> • use methods of nonlinear constrained optimization in finite dimensional spaces, • analyse convergence behaviour of these methods and derive robust and efficient realisations, • apply these abilities to technical and economic applications. 	
7	Prerequisites	Basic knowledge in nonlinear optimization is recommended.	
8	Integration in curriculum	semester: 1	
9	Module compatibility	Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192 Specialisation: Modeling and applied analysis (MAPA) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192 Specialisation: Numerical analysis and simulation (NASi) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192	
10	Method of examination	mündlich	
11	Grading procedure	mündlich (100%)	
12	Module frequency	Only in winter semester	
13	Workload in clock hours	Contact hours: 37,5 Independent study: 112,5	
14	Module duration	1 semester	
15	Teaching and examination language	english	
16	Bibliography	<ul style="list-style-type: none"> • C.T. Kelley: Iterative Methods for Optimization, SIAM, • J. Nocedal & S. Wright: Numerical Optimization, Springer. 	

1	Module name 65900	Advanced discretization techniques	10 ECTS
2	Courses / lectures	The teaching units in the module are only offered in the winter semester.	
3	Lehrende	-	

4	Module coordinator	Prof. Dr. Eberhard Bänsch	
5	Contents	<ul style="list-style-type: none"> conforming and non-conforming finite element methods saddle point problems in Hilbert spaces mixed finite element methods for saddle point problems, in particular for Darcy and Stokes Streamline-Upwind Petrov-Galerkin (SUPG) and discontinuous Galerkin (dG) finite element methods (FEM) for convection dominated problems Finite Volume (FV) methods and their relation to FEM a posteriori error control and adaptive methods 	
6	Learning objectives and skills	<p>Students</p> <ul style="list-style-type: none"> have a discriminating understanding, both theoretically and computationally of FE as well as FV methods for the numerical solution of partial differential equations (pde) (in particular of saddle point problems), are capable of developing problem dependent FE or FV methods and judge on their properties regarding stability and effectiveness, are familiar with a broad spectrum of pde problems and their computational solutions, are capable of designing algorithms for adaptive mesh control. 	
7	Prerequisites	Recommended: Introduction to numerical methods for pdes, functional analysis	
8	Integration in curriculum	semester: 1	
9	Module compatibility	<p>Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192 Specialisation: Modeling and applied analysis (MApA) and numerical analysis and simulation (NASi) Master of Science Computational and Applied Mathematics 20192 Specialisation: Numerical analysis and simulation (NASi) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192</p>	
10	Method of examination	mündlich	
11	Grading procedure	mündlich (100%)	
12	Module frequency	Only in winter semester	
13	Workload in clock hours	Contact hours: 75 h Independent study: 225 h	
14	Module duration	1 semester

5	Contents	<p>In modern Convex Optimization the theory of semidefinite optimization plays a central role. Semidefinite optimization is a generalization of linear optimization, where one wants to optimize linear functions over positive semidefinite matrices restricted by linear constraints. A wide class of convex optimization problems can be modeled using semidefinite optimization. On the one hand, there are algorithms to solve semidefinite optimization problems, which are efficient in theory and practice. On the other hand, semidefinite optimization is a tool of particular usefulness and elegance.</p> <p>Overview of topics:</p> <ul style="list-style-type: none"> • Topological properties of cones • Foundations of conic optimization, theorems of the alternative, duality • Applications in Eigenvalue optimization and robust optimization • Approximations of combinatorial optimization problems such as MAXCUT, packing problems, coloring problems, Shannon capacity • Symmetry reduction of optimization
6	Learning objectives and skills	<p>Students</p> <ul style="list-style-type: none"> • gain insight of the fundamental concepts in conic optimization • apply algorithmic techniques to problems in the fields of combinatorics, geometry and algebra • extend their expertise in geometry, in particular about the interplay between the fields of geometry and optimization
7	Prerequisites	Recommended: at least one of the modules Linear and combinatorial optimization, robust optimization, discrete optimization
8	Integration in curriculum	semester: 1;3
9	Module compatibility	<p>Specialisation: Modeling and applied analysis (MApA) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192</p> <p>Specialisation: Numerical analysis and simulation (NASi) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192</p>

1	Module name 65917	Discrete optimization I	5 ECTS
2	Courses / lectures	The teaching units in the module are only offered in the winter semester.	
3	Lehrende	-	

4	Module coordinator	Prof. Dr. Frauke Liers-Bergmann	
5	Contents	Theoretical and practical fundamentals of solving difficult mixed-integer linear optimization problems (MIPs) constitute the main focus of this lecture. At first, the concept of NP-completeness and a selection of common NP-complete problems will be presented. As for polyhedral theory, fundamentals concerning the structure of faces of convex polyhedra will be covered. Building upon these fundamentals, cutting plane algorithms as well as branch-and-cut algorithms for solving MIPs will be taught. Finally, some typical problems of discrete optimization, e.g., the knapsack problem, the traveling salesman problem or the set packing problem will be discussed.	
6	Learning objectives and skills	Students <ul style="list-style-type: none"> • will gain basic theoretical knowledge of solving mixed-integer linear optimization problems (MIPs), • are able to solve MIPs with the help of state-of-the-art optimization software. 	
7	Prerequisites	Recommended: Linear and Combinatorial Optimization	
8	Integration in curriculum	semester: 1	
9	Module compatibility	Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192 Specialisation: Modeling and applied analysis (MApA) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192 Specialisation: Numerical analysis and simulation (NASi) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192

4	Module coordinator	Prof. Dr. Timm Oertel
5	Contents	In this lecture, we cover theoretical aspects and solution strategies for difficult integer and mixed-integer optimization problems. First, we show the equivalence between separation and optimization. Then, we present solution strategies for large-scale optimization problems, e.g., decomposition methods and approximation algorithms. Finally, we deal with conditions for the existence of integer polyhedra. We also discuss applications for example from the fields of engineering, finance, energy or public transport.
6	Learning objectives and skills	Students <ul style="list-style-type: none"> • use basic terms of discrete optimization • model real-world discrete optimization problems, determine their complexity and solve them with appropriate mathematical methods.
7	Prerequisites	Recommended: Knowledge in linear and combinatorial optimization, discrete optimization I
8	Integration in curriculum	semester: 2

1	Module name 65888	Navier Stokes Equations Navier stokes equations	10 ECTS
2	Courses / lectures	Zu diesem Modul sind keine Lehrveranstaltungen oder Lehrveranstaltungsgruppen hinterlegt!	
3	Lehrende	No lecturers available since there are no courses / lectures for this module!	

4	Module coordinator	Prof. Dr. Emil Wiedemann	
5	Contents	<p>The incompressible Navier-Stokes equations (NSE) are a nonlinear system of partial differential equations fundamental for the modelling of fluid flow. They are extensively used in meteorology and oceanography, but also pose great mathematical challenges. Famously, global regularity of the three-dimensional NSE forms one of the seven Millennium Problems. This course serves as an introduction to the mathematical theory of these equations and includes the following topics:</p> <ul style="list-style-type: none"> • existence of weak solutions of Leray-Hopf type; • local-in-time existence of strong solutions; • the Prodi-Serrin criteria for regularity and energy balance; • partial regularity theory; • the singular limit of vanishing viscosity. <p>The course can be a good preparation for a subsequent master's thesis in the topic.</p>	
6	Learning objectives and skills	Students know and understand the basic theory of the Navier-Stokes equations and have mastered important methods for systems of non-linear partial differential equations. They have a basic understanding of mathematical fluid dynamics.	
7	Prerequisites	Lineare Algebra, Analysis. Empfohlen: erste Kurse in partiellen Differentialgleichungen und Funktionalanalysis.	
8	Integration in curriculum	semester: 1	
9	Module compatibility	<p>Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192 Specialisation: Modeling and applied analysis (MApA) and numerical analysis and simulation (NASi) Master of Science Computational and Applied Mathematics 20192 Specialisation: Modeling and applied analysis (MApA) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192</p>

5	Contents	<p>This course focuses on modeling and solving real-world optimization problems occurring in industry and economics. Advantages and disadvantages of different modeling techniques will be outlined. In order to achieve efficient solution approaches, different reformulations and their numerical results will be discussed. Students will learn how to present optimization results properly as well as how to interpret and evaluate these results for practical applications. The latter may include but is not limited to the optimization of transport networks (gas, water, energy), air traffic management and mathematical modeling/optimization of market mechanisms in the energy sector.</p>	
6	Learning objectives and skills	<p>Students</p> <ul style="list-style-type: none"> • model complex real-world optimization problems with respect to efficient • solvability, • classify the models and use appropriate solution strategies, • evaluate the achieved computational results.

1	Module name 65924	Project seminar optimization	5 ECTS
2	Courses / lectures	Zu diesem Modul sind keine Lehrveranstaltungen oder Lehrveranstaltungsgruppen hinterlegt!	
3	Lehrende	No lecturers available since there are no courses / lectures for this module!	

4	Module coordinator	Prof. Dr. Frauke Liers-Bergmann	
5	Contents	A specific application is to be used to implement the knowledge of mathematical optimisation models and methods acquired during the degree programme thus far. The content is taken from a current problem, often in close collaboration with an industrial partner. Examples might be the water supply for a city, the design of an energy-efficient facade for an office building or railway construction site management.	
6	Learning objectives and skills	<p>Students</p> <ul style="list-style-type: none"> organise themselves into teams to carry out a large project in which they independently model a real problem, develop and implement solutions and apply their results in practical situations, strengthen their communication skills by presenting and discussing the results of the project work, discuss information, ideas, problems and solutions at an academic level with each other and with the lecturers. 	
7	Prerequisites	Recommended: knowledge in combinatorial optimisation	
8	Integration in curriculum	semester: 2	
9	Module compatibility	<p>Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192 Specialisation: Modeling and applied analysis (MAPa) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192 Specialisation: Numerical analysis and simulation (NASi) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192</p>

14	Module duration	1 semester	
15	Teaching and examination language	english	
16	Bibliography	Project-dependent. Will be published on StudOn at the beginning of the semester.	

1	Module name 65918	Robust optimization II	5 ECTS
2	Courses / lectures	Übung: Übung zu Robuste Optimierung 2 (2.0 SWS) Vorlesung: Robuste Optimierung 2 (2.0 SWS)	- 5 ECTS
3	Lehrende	Prof. Dr. Frauke Liers-Bergmann Martina Kuchlbauer Florian Rösel	

4	Module coordinator	Prof. Dr. Frauke Liers-Bergmann
5	Contents	<ul style="list-style-type: none"> In practice, provided data for mathematical optimization problems is often not fully known. Robust optimization aims at finding the best solution which is feasible for input data varying within certain tolerances. The lecture covers advanced methods of robust optimization in theory and modeling. In particular, robust network flows, robust integer optimization and robust approximation are included. Further, state-of-the-art concepts, e.g., "light robustness" or "adjustable robustness" will be discussed by means of real-world applications.
6	Learning objectives and skills	<p>Students</p> <ul style="list-style-type: none"> will be able to identify complex optimization problems under uncertainties as well as suitably model and analyze the corresponding robust optimization problem with the help of advanced techniques of robust optimization, learn the handling of appropriate solving techniques and how to analyze the corresponding results.
7	Prerequisites	<ul style="list-style-type: none"> Recommended: Robust Optimization I
8	Integration in curriculum	semester: 2
9	Module compatibility	<p>Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192</p> <p>Specialisation: Modeling and applied analysis (MAPA) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192</p> <p>Specialisation: Numerical analysis and simulation (NASi) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192</p>

3	Lehrende	No lecturers available since there are no courses / lectures for this module!	

4	Module coordinator	Serge Kräutle	
5	Contents	<ul style="list-style-type: none"> • Degenerate parabolic differential equations as multiphase flow models: formulation, model derivation through asymptotic expansion, nonlinear solution methods, discretization methods • Sorption reactions and mineral precipitation-dissolution reactions, formulations as complementarity problems • Models for transport and reactions in porous media, consisting of coupled PDEs and ODEs, if necessary coupled to algebraic equations (AEs) and inequalities for the description of local equilibria (differential-algebraic system) • Different formulations of the system • Different numerical strategies: operator splitting, direct substitutional approach, change of variables and combination/elimination of equations (xi-eta-method), as a basis for different software packages for numerical simulations, connection to optimisation (minimization of Gibbs free energy under constraints) • Treatment of numerical difficulties (nonsmooth equations, treatment of complementarity conditions, guarantee of nonnegativity of numerical solutions of the nonlinear problems, range of convergence of Newton's method, scaling problems, advection dominated problems) 	
6	Learning objectives and skills	<p>Students</p> <ul style="list-style-type: none"> • use methods for the numerical solving of a class of problems whose complexity goes significantly beyond standard problems (Poisson and heat equation): coupled nonlinear partial and ordinary differential equations (PDEs, ODEs) and algebraic equations (AEs), • put strategies for the treatment of possible difficulties during the numerical solving into practice. 	
7	Prerequisites	<ul style="list-style-type: none"> • Recommended: Basic knowledge in differential equations, • Also useful: Transport and Reaction in Porous Media: Modeling 	
8	Integration in curriculum	semester: 3	
9	Module compatibility	<p>Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192</p> <p>Specialisation: Modeling and applied analysis (MAPA) and numerical analysis and simulation (NASi) Master of Science Computational and Applied Mathematics 20192</p>	

		Specialisation: Numerical analysis and simulation (NASi) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192
10	Method of examination	mündlich
11	Grading procedure	mündlich (100%)
12	Module frequency	Irregular
13	Workload in clock hours	Contact hours: 37,5 Independent study: 112,5
14	Module duration	1 semester
15	Teaching and examination language	english
16	Bibliography	<ul style="list-style-type: none"> • P. Knabner & L. Angermann: Numerical Methods for Elliptic and Parabolic Partial Differential Equations, Springer • Journal articles will be named in the lecture • Handbooks of Software Packages https://en.www.math.fau.de/angewandte-mathematik-1/forschung/software-2

1	Module name 65068	Wave Phenomena Wave phenomena	5 ECTS
2	Courses / lectures	No teaching units are offered for the module in the current semester. For further information on teaching units please contact the module managers.	
3	Lehrende	-	

4	Module coordinator	Prof. Dr. Enrique Zuazua Iriondo	
5	Contents	<p>1) Motivations and applications.</p> <p>2) Linear transport equation: method of characteristics; Fourier analysis and numerical approximations.</p> <p>3) The wave equation: D'Alembert's representation formula; regularity of the solutions; finite speed of propagation of perturbations; Huygens' principle; geometric optics; wave models with sources or sinks; Kirchhoff's representation in \mathbb{R}^3; Poisson's representation in \mathbb{R}^2; the case of general odd and even space dimensions; energy methods: domain of dependence inequality and energy conservation; representation of solutions by using partial Fourier transform; subordination waves-heat; the reflection method and waves on the half-line; separation of variables.</p> <p>4) Klein-Gordon equation: energy estimates; representation of solutions by using Fourier multipliers; von Wahl's transformation.</p> <p>5) Damped wave equation: energy estimates; representation of solutions by using Fourier multipliers; decay behavior and decay rate.</p> <p>6) Damped plate equation: estimates for the energy; estimates for the solution itself and its derivatives;</p> <p>7) Semilinear wave equation: global existence for small data and global existence for large data.</p> <p>8) Diffusion phenomena: parabolic structure of solutions to damped waves and damped plates; diffusion phenomena in thermo-elasticity; traveling waves and reaction-diffusion models.</p> <p>9) Scalar conservation laws: occurrence of shocks and rarefaction waves.</p> <p>10) Linear and nonlinear dispersive waves: Solitary waves for the Korteweg-de Vries equation; plane-wave solutions for the Airy equation and Schrödinger; Fourier analysis.</p> <p>11) Maxwell equations: constitutive equations; special cases; boundary conditions; expansion into wave functions.</p>	
6	Learning objectives and skills	<p>Students are able to:</p> <ul style="list-style-type: none"> • identify significant mechanisms and to apply suitable analytical and numerical methods for their analysis • work interdisciplinary and in problem-oriented way; • use language and techniques related to partial differential equations; • work out the examples and applications that accompany the theory. 	

7	Prerequisites	Recommended: knowledge of linear algebra and calculus; basic knowledge of functional analysis
8	Integration in curriculum	semester: 2
9	Module compatibility	Specialisation: Modeling and applied analysis (MApA) and numerical analysis and simulation (NASi) Master of Science Computational and Applied Mathematics 20192 Specialisation: Modeling and applied analysis (MApA) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192 Specialisation: Numerical analysis and simulation (NASi) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192
10	Method of examination	mündlich (20 Minuten)
11	Grading procedure	mündlich (100%)
12	Module frequency	Only in summer semester
13	Workload in clock hours	Contact hours: 35 h Independent study: 115 h
14	Module duration	1 semester
15	Teaching and examination language	english
