

# Module description

for the degree programme

Master of Science Computational  
and Applied Mathematics

(Version of examination regulation: 20192)

for the summer term 2026

flat version (only modules, no levels  
(Konten)), in alphabetical order

# Table of contents

Advanced algorithms for nonlinear optimization (65916).....	4
Advanced nonlinear optimization (65920).....	5
Advanced solution techniques (65901).....	6
Analysis of free-boundary problems in continuum mechanics (65997).....	8
A primer on functional-analytic methods for PDEs (65075).....	9
Architectures of supercomputers (44460).....	11
Control, machine learning and numerics (65093).....	13
Differential geometry (65879).....	15
Discrete optimization I (65917).....	17
Discrete optimization II (65922).....	19
Discrete optimization III (65910).....	21
Efficient discretization of two-phase flow (65083).....	23
Elective modules (as selected from FAU-modules) (1500).....	24
Hyperbolic Conservation Laws and Application (65864).....	25
Introduction to control and machine learning (65067).....	27
Introduction to material- and shape optimization (65915).....	29
Inverse Problems (65928).....	31
Lecture series: Partial differential equations, control and numerics (PdeConNum) (65700).....	32
Master seminar Opti (65895).....	34
Master`s seminar MApA (65885).....	36
Master's seminar NASi (65890).....	38
Master's thesis (1999).....	40
Mathematical Foundations of Control and Machine Learning (65894).....	42
Mathematical Image Processing (48241).....	44
Mathematical modeling in the life sciences (65911).....	46
Mathematics of learning (65785).....	48
Mathematics of multiscale models (65906).....	50
Modeling and analysis in continuum mechanics I (65860).....	51
Modeling and analysis in continuum mechanics II (65865).....	53
Modeling, simulation and optimization (65870).....	55
Module: Conservation laws (65887).....	57
Navier stokes equations (65888).....	59
Neural Network Theory (65838).....	61
Numerical aspects of linear and integer programming (65919).....	63
Numerical methods of elliptic PDEs (65878).....	64
Numerics of incompressible flows I (65904).....	65
Numerics of incompressible flows I (65853).....	67
Numerics of incompressible flows II (65905).....	69
Numerics of incompressible flows II (65854).....	71
Numerics of optimal control (65954).....	73
Numerics of partial differential equations (65993).....	75
Numerics of partial differential equations II (65999).....	77
Numerics of stochastic evolution equations (65908).....	79
Optimal control theory (65959).....	80
Optimization in industry and economy (65923).....	82
Optimization with partial differential equations (65921).....	84
Partial differential equations in finance (65914).....	85
Polynomial Optimization and Application (65877).....	87
Practical course on finite element methods for phase separation equations (65095).....	89

Programming techniques for supercomputers in CAM (65875).....	90
Project seminar optimization (65924).....	92
Robust optimization II (65918).....	94
Scalar conservation laws (65089).....	96
Selected topics in mathematics of learning (65789).....	99
Seminar: Applied analysis (65787).....	100
Seminar: Evolution equations (65071).....	101
Seminar: Selected topics of applied analysis (65096).....	102
Stochastic analysis (65970).....	104
Subspace correction methods (65909).....	105
Theory of stochastic evolution equations (65907).....	107
Transport and reaction in porous media: Modelling (65902).....	109
Transport and reaction in porous media: Simulation (65903).....	111
Wave phenomena (65068).....	113

1	<b>Module name</b> 65916	<b>Advanced algorithms for nonlinear optimization</b>	<b>5 ECTS</b>
2	Courses / lectures	Vorlesung: Advanced Algorithms for Nonlinear Optimization (2 SWS) (WiSe 2025)	5 ECTS
3	Lehrende	Prof. Dr. Michael Stingl	

4	<b>Module coordinator</b>	Prof. Dr. Michael Stingl	
5	<b>Contents</b>	Several of the following topics: <ul style="list-style-type: none"> <li>• Trust region methods</li> <li>• Iterative methods in the presence of noisy data</li> <li>• Interior point methods for nonlinear problems</li> <li>• Modified barrier and augmented Lagrangian methods</li> <li>• Local and global convergence analysis</li> </ul>	
6	<b>Learning objectives and skills</b>	Students <ul style="list-style-type: none"> <li>• use methods of nonlinear constrained optimization in finite dimensional spaces,</li> <li>• analyse convergence behaviour of these methods and derive robust and efficient realisations,</li> <li>• apply these abilities to technical and economic applications.</li> </ul>	
7	<b>Prerequisites</b>	Basic knowledge in nonlinear optimization is recommended.	
8	<b>Integration in curriculum</b>	semester: 1	
9	<b>Module compatibility</b>	Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192 Specialisation: Modeling and applied analysis (MApA) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192 Specialisation: Numerical analysis and simulation (NASi) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192	
10	<b>Method of examination</b>	mündlich (15 min) *	
11	<b>Grading procedure</b>	mündlich (100%)	
12	<b>Module frequency</b>	Only in winter semester	
13	<b>Workload in clock hours</b>	Contact hours: 30 h Independent study: 120 h	
14	<b>Module duration</b>	1 semester	
15	<b>Teaching and examination language</b>	english	
16	<b>Bibliography</b>	<ul style="list-style-type: none"> <li>• C.T. Kelley: Iterative Methods for Optimization, SIAM,</li> <li>• J. Nocedal &amp; S. Wright: Numerical Optimization, Springer.</li> </ul>	

1	<b>Module name</b> 65920	<b>Advanced nonlinear optimization</b>	<b>10 ECTS</b>
2	Courses / lectures	Zu diesem Modul sind in diesem Semester keine Lehrveranstaltungen oder Lehrveranstaltungsgruppen hinterlegt!	
3	Lehrende	No lecturers available since there are no courses / lectures for this module for this semester!	

4	<b>Module coordinator</b>	Prof. Dr. Wolfgang Achtziger	
5	<b>Contents</b>	<ul style="list-style-type: none"> <li>advanced optimality conditions and constraint qualifications for constrained optimization problems</li> <li>penalty, barrier and augmented Lagrangian methods: theory and algorithms</li> <li>interior point methods</li> <li>sequential quadratic programming</li> </ul>	
6	<b>Learning objectives and skills</b>	<p>Students</p> <ul style="list-style-type: none"> <li>explain and extend their knowledge on theory and algorithms of nonlinear optimization problems,</li> <li>apply solution techniques to different advanced types of optimization problems,</li> <li>derive and solve optimization problems arising from technical and economical applications.</li> </ul>	
7	<b>Prerequisites</b>	Basic knowledge in nonlinear optimization is recommended.	
8	<b>Integration in curriculum</b>	semester: 1	
9	<b>Module compatibility</b>	<p>Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192  Specialisation: Modeling and applied analysis (MAPA) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192  Specialisation: Numerical analysis and simulation (NASi) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192</p>	
10	<b>Method of examination</b>	mündlich oral exam (20 min) *	
11	<b>Grading procedure</b>	mündlich (100%)	
12	<b>Module frequency</b>	Irregular	
13	<b>Workload in clock hours</b>	Contact hours: 75 h Independent study: 225 h	
14	<b>Module duration</b>	1 semester	
15	<b>Teaching and examination language</b>	english	
16	<b>Bibliography</b>	<ul style="list-style-type: none"> <li>M.S. Bazaraa, H.D. Sherali &amp; C.M. Shetty: Nonlinear Programming Theory and Algorithms, Wiley, New York,</li> <li>J. Nocedal &amp; S. Wright: Numerical Optimization, Springer.</li> </ul>	

1	<b>Module name</b> 65901	<b>Advanced solution techniques</b>	<b>5 ECTS</b>
2	Courses / lectures	Übung: Exercises for Advanced Solution Techniques (1 SWS) Vorlesung: Advanced Solution Techniques (2 SWS)	- 5 ECTS
3	Lehrende	PD Dr. Nicolas Neuß	

4	<b>Module coordinator</b>	Prof. Dr. Eberhard Bänsch
5	<b>Contents</b>	<ul style="list-style-type: none"> <li>• Krylov subspace methods for large non-symmetric systems of equations</li> <li>• Multilevel methods, especially multigrid (MG) methods, nested and non-nested grid hierarchies</li> <li>• Parallel numerics, especially domain decomposition methods</li> <li>• Inexact Newton/Newton-Krylov methods for discretized nonlinear partial differential equations</li> <li>• Preconditioning and operator-splitting methods</li> </ul>
6	<b>Learning objectives and skills</b>	<p>Students</p> <ul style="list-style-type: none"> <li>• are able to design application-specific own MG algorithms with the theory of multigrid methods and decide for which problems the MG algorithm is suitable to solve large linear systems of equations,</li> <li>• are able to solve sparse nonlinear/non-symmetric systems of equations with modern methods (also with parallel computers),</li> <li>• are able to develop under critical assessment complete and efficient methods for application-orientated problems.</li> </ul>
7	<b>Prerequisites</b>	Recommended: Advanced Discretization Techniques
8	<b>Integration in curriculum</b>	semester: 2
9	<b>Module compatibility</b>	<p>Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192</p> <p>Specialisation: Modeling and applied analysis (MApA) and numerical analysis and simulation (NASi) Master of Science Computational and Applied Mathematics 20192</p> <p>Specialisation: Numerical analysis and simulation (NASi) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192</p>
10	<b>Method of examination</b>	mündlich oral exam (15 min) *
11	<b>Grading procedure</b>	mündlich (100%)
12	<b>Module frequency</b>	Only in summer semester
13	<b>Workload in clock hours</b>	Contact hours: 45 h Independent study: 105 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	english

16	<b>Bibliography</b>	<ul style="list-style-type: none"><li>• Quarteroni &amp; A. Valli: Numerical Approximation of Partial Differential Equations</li><li>• P. Knabner &amp; L. Angermann: Numerical Methods for Elliptic and Parabolic Differential Equations</li><li>• Further literature and scientific publications are announced during the lectures</li></ul>
----	---------------------	--

1	<b>Module name</b> 65997	<b>Analysis of free-boundary problems in continuum mechanics</b>	<b>5 ECTS</b>
2	Courses / lectures	Zu diesem Modul sind in diesem Semester keine Lehrveranstaltungen oder Lehrveranstaltungsgruppen hinterlegt!	
3	Lehrende	No lecturers available since there are no courses / lectures for this module for this semester!	

4	<b>Module coordinator</b>	Prof. Dr. Günther Grün	
5	<b>Contents</b>	<ul style="list-style-type: none"> <li>• Derivation of time-dependent free boundary problems in continuum mechanics,</li> <li>• Basic results on existence and qualitative behaviour,</li> <li>• Optimal estimates on the propagation of free boundaries,</li> <li>• Other approaches, e.g. relaxation by phase-field models.</li> </ul>	
6	<b>Learning objectives and skills</b>	<p>Students</p> <ul style="list-style-type: none"> <li>• formulate free-boundary problems in hydrodynamics and in porousmedia flow</li> <li>• explain analytical concepts for existence and nonnegativity results for degenerate parabolic equations as well as techniques for optimal estimates on spreading rates</li> <li>• validate different modeling approaches in a critical way.</li> </ul>	
7	<b>Prerequisites</b>	Recommended: Basic knowledge of analysis of partial differential equations, corresponding to the syllabus of Modeling and Applied Analysis in Continuum Mechanics or that one of other pde-lectures.	
8	<b>Integration in curriculum</b>	semester: 3	
9	<b>Module compatibility</b>	<p>Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192</p> <p>Specialisation: Modeling and applied analysis (MAPa) and numerical analysis and simulation (NASi) Master of Science Computational and Applied Mathematics 20192</p> <p>Specialisation: Modeling and applied analysis (MAPa) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192</p>	
10	<b>Method of examination</b>	mündlich (ca. 15 min) *	
11	<b>Grading procedure</b>	mündlich (100%)	
12	<b>Module frequency</b>	Only in winter semester	
13	<b>Workload in clock hours</b>	Contact hours: 37,5 Independent study: 112,5	
14	<b>Module duration</b>	1 semester	
15	<b>Teaching and examination language</b>	english	
16	<b>Bibliography</b>	<ul style="list-style-type: none"> <li>• L.C. Evans: Partial Differential Equations, AMS,</li> <li>• Original journal articles.</li> </ul>	

1	<b>Module name</b> 65075	<b>A primer on functional-analytic methods for PDEs</b>	<b>5 ECTS</b>
2	Courses / lectures	Zu diesem Modul sind in diesem Semester keine Lehrveranstaltungen oder Lehrveranstaltungsgruppen hinterlegt!	
3	Lehrende	No lecturers available since there are no courses / lectures for this module for this semester!	

4	<b>Module coordinator</b>	Prof. Dr. Günther Grün	
5	<b>Contents</b>	<p>Basics and foundations in the following topics:</p> <ul style="list-style-type: none"> <li>• Banach and Hilbert spaces,</li> <li>• dual spaces and weak topology,</li> <li>• compact operators, their spectral theory,</li> <li>• Sobolev spaces, approximation and trace theorems</li> <li>• variational formulation of PDEs,</li> <li>• Sobolev solutions to linear elliptic PDEs (Lax-Milgram/ Fredholm alternative)</li> </ul>	
6	<b>Learning objectives and skills</b>	<p>Students are able to:</p> <ul style="list-style-type: none"> <li>• name and explain fundamental concepts in functional analysis,</li> <li>• navigate between weak and strong topologies and have an understanding of their relation and respective properties,</li> <li>• work with Sobolev spaces and weak derivatives and give qualitative information about Sobolev functions,</li> <li>• identify, set up and work with variational formulations of linear elliptic PDEs in order to derive existence/uniqueness of solutions in the Sobolev setting</li> </ul>	
7	<b>Prerequisites</b>	Recommended: Basic knowledge in normed vector spaces, Lebesgue integration and Linear Algebra	
8	<b>Integration in curriculum</b>	semester: 1	
9	<b>Module compatibility</b>	Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192

1	<b>Module name</b> 44460	<b>Architekturen von Superrechnern</b> Architectures of supercomputers	<b>5 ECTS</b>
2	Courses / lectures	Übung: Exercises Architectures of Supercomputers / Übungen Architekturen von Superrechnern (2 SWS) (WiSe 2025)  Vorlesung: ArchSup (2 SWS) (WiSe 2025)	2,5 ECTS  2,5 ECTS
3	Lehrende	Prof. Dr.-Ing. Dietmar Fey Farhad Ebrahimiazandaryani	

4	<b>Module coordinator</b>	Prof. Dr.-Ing. Dietmar Fey	
5	<b>Contents</b>	<ul style="list-style-type: none"> <li>• Principles of computer and processor architectures</li> <li>• Modern processor architectures</li> <li>• Homogeneous and heterogeneous multi/many-core processors</li> <li>• Parallel computer architectures</li> <li>• Classification and principles of coupling parallel computers</li> <li>• High speed networks in supercomputers</li> <li>• Examples of supercomputers</li> <li>• Programming of supercomputers</li> </ul>	
6	<b>Learning objectives and skills</b>	<p>Fachkompetenz Wissen Lernende können die Funktionsweise moderner in Superrechnern eingesetzter Prozessoren wiedergeben. Sie erkennen die besonderen Probleme im Zusammenhang mit dem Energieverbrauch und der Programmierung von Superrechnern.</p> <p>Verstehen Lernende können die Unterschiede bei der Kopplung paralleler Prozesse darstellen. Sie können Parallelrechner hinsichtlich ihrer Speicheranbindung und den grundlegenden Verarbeitungsprinzipien klassifizieren.</p> <p>Anwenden Lernenden sind in der Lage ein eigenes technisches oder mathematisches Problem zur Lösung auf einem Supercomputer umzusetzen und auszuführen. Anhand der in der Vorlesung gezeigten Beispiele sind sie in der Lage, Herausforderungen beim Auffinden von Flaschenhälsen zu verallgemeinern und für ihr konkretes Problem anzuwenden.</p> <p>Analysieren Lernende sind in der Lage, ihre Problemstellungen, z.B. naturwissenschaftliche oder technische Simulationsexperimente, hinsichtlich der Rechen- und Speicheranforderungen für einen Supercomputer geeignet für die Architektur zu charakterisieren.</p> <p>Evaluieren (Beurteilen) Lernende können mithilfe der aufgezeigten Methodiken zur Leistungsmessung von Parallelrechnern unterschiedliche Rechnerarchitekturen bewerten und für ihre Problemstellung die passende Architektur auswählen.</p>	

7	<b>Prerequisites</b>	None
8	<b>Integration in curriculum</b>	no Integration in curriculum available!
9	<b>Module compatibility</b>	Pflichtmodul Master of Science Computational and Applied Mathematics 20192
10	<b>Method of examination</b>	schriftlich
11	<b>Grading procedure</b>	schriftlich (100%)

4	<b>Module coordinator</b>	Prof. Dr. Frauke Liers-Bergmann	
5	<b>Contents</b>	Theoretical and practical fundamentals of solving difficult mixed-integer linear optimization problems (MIPs) constitute the main focus of this lecture. At first, the concept of NP-completeness and a selection of common NP-complete problems will be presented. As for polyhedral theory, fundamentals concerning the structure of faces of convex polyhedra will be covered. Building upon these fundamentals, cutting plane algorithms as well as branch-and-cut algorithms for solving MIPs will be taught. Finally, some typical problems of discrete optimization, e.g., the knapsack problem, the traveling salesman problem or the set packing problem will be discussed.	
6	<b>Learning objectives and skills</b>	Students <ul style="list-style-type: none"> <li>• will gain basic theoretical knowledge of solving mixed-integer linear optimization problems (MIPs),</li> <li>• are able to solve MIPs with the help of state-of-the-art optimization software.</li> </ul>	
7	<b>Prerequisites</b>	Recommended: Linear and Combinatorial Optimization	
8	<b>Integration in curriculum</b>	semester: 1	
9	<b>Module compatibility</b>	Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192 Specialisation: Modeling and applied analysis (MAPa) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192 Specialisation: Numerical analysis and simulation (NASi) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192

3	Lehrende	Prof. Dr. Timm Oertel	

4	<b>Module coordinator</b>	Prof. Dr. Timm Oertel
5	<b>Contents</b>	In this lecture, we cover theoretical aspects of discrete optimization. Taking a geometric approach, a focus will be on lattice theory, studying the interplay of lattices and convex bodies. Topics will include: Reduced bases, like the LLL-reduced basis, Minkowski's Theorem on successive minima, The closest lattice vector problem, Lenstra's Algorithm for linear integer optimization in fixed dimension, Barvinok's Algorithm for counting integer points in polytopes.
6	<b>Learning objectives and skills</b>	Students will learn basic concepts and tools in discrete optimization and discrete geometry, and they will learn how to apply these, for example, in discrete optimization.
7	<b>Prerequisites</b>	Recommended: Linear and Combinatorial Optimization, and Discrete Optimization I
8	<b>Integration in curriculum</b>	semester: 2;4

2	Courses / lectures	Vorlesung: Diskrete Optimierung III (Optimization in Industry and Economy) (2 SWS) (WiSe 2025) Übung: Tutorial zu Diskrete Optimierung III (1 SWS) (WiSe 2025)	5 ECTS -
3	Lehrende	Sebastian Denzler Prof. Dr. Frauke Liers-Bergmann	

4	<b>Module coordinator</b>	Prof. Dr. Timm Oertel	
5	<b>Contents</b>	<p>In this lecture we will discuss selected topics in discrete and mixed-integer optimization. Possible topics include lattice methods, integer programming in fixed dimension, recent research on (mixed) integer linear and/or (mixed) integer nonlinear programming and so on. The specific topics may vary and will be announced in due time.</p> <p>FORMERLY: In this lecture, we cover theoretical aspects and solution strategies for difficult integer and mixed-integer optimization problems. First, we show the equivalence between separation and optimization. Then, we present solution strategies for large-scale optimization problems, e.g., decomposition methods and approximation algorithms. Finally, we deal with conditions for the existence of integer polyhedra. We also discuss applications for example from the fields of engineering, finance, energy or public transport.</p>	
6	<b>Learning objectives and skills</b>	<p>Students</p> <ul style="list-style-type: none"> <li>• use basic terms of discrete optimization</li> <li>• model real-world discrete optimization problems, determine their complexity and solve them with appropriate mathematical methods.</li> </ul>	
7	<b>Prerequisites</b>	<p>Recommended: Knowledge in linear and combinatorial optimization, discrete optimization I and II</p>

1	<b>Module name</b> 65864	<b>Hyperbolic Conservation Laws and Application</b>	<b>5 ECTS</b>
2	Courses / lectures	Zu diesem Modul sind in diesem Semester keine Lehrveranstaltungen oder Lehrveranstaltungsgruppen hinterlegt!	
3	Lehrende	No lecturers available since there are no courses / lectures for this module for this semester!	

4	<b>Module coordinator</b>	Prof. Dr. Emil Wiedemann	
5	<b>Contents</b>	Hyperbolic conservation laws are essential for the description of non-dissipative phenomena such as the flow of inviscid gases or shallow water waves. The mathematical theory is confronted with the lack of regularity, as initially smooth solutions may develop discontinuities (interpreted as shock waves) in finite time. We study scalar conservation laws, for which there is a classical well-posedness theory of entropy solutions due to Kruzhkov. Later, we investigate hyperbolic systems with a special focus on the Riemann problem, which requires a detailed understanding of the geometry of shock and rarefaction curves. Particular emphasis will be on the discussion of models of gas flow and thermodynamics, such as the compressible Euler equations.	
6	<b>Learning objectives and skills</b>	Students know and understand the basic theory of scalar conservation laws and hyperbolic systems. They relate mathematical theory to the modelling of physical phenomena and are familiar with various concepts of entropy. They learn important analytical techniques such as compensated compactness.	
7	<b>Prerequisites</b>	Recommended: Linear Algebra, Analysis, and a beginners' course on partial differential equations.	
8	<b>Integration in curriculum</b>	semester: 1;2;3	
9	<b>Module compatibility</b>	Specialisation: Modeling and applied analysis (MApA) and numerical analysis and simulation (NASi) Master of Science Computational and Applied Mathematics 20192 Specialisation: Modeling and applied analysis (MApA) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192

2	Courses / lectures	Zu diesem Modul sind in diesem Semester keine Lehrveranstaltungen oder Lehrveranstaltungsgruppen hinterlegt!	
3	Lehrende	No lecturers available since there are no courses / lectures for this module for this semester!	

4	<b>Module coordinator</b>	Prof. Dr. Günther Grün
5	<b>Contents</b>	The masters thesis is in the field of Modelling and Analysis, or Numerical Analysis and Simulation, or Optimization, and deals with a current research topic.
6	<b>Learning objectives and skills</b>	<p>Students</p> <ul style="list-style-type: none"> <li>• are capable of independently follow up a scientific question in the fields of Modelling and Analysis, Numerical Analysis and Simulation or Optimization over an extended, specified period,</li> <li>• develop original ideas and concepts for solving scientific problems in these fields,</li> <li>• apply and improve mathematical methods rather independently - also in unfamiliar and interdisciplinary contexts,</li> <li>• present and explain mathematical or interdisciplinary contents clearly in a manner appropriate for the target audience, both in writing and orally,</li> <li>• improve their ability to plan and structure by implementing a thematic project.</li> </ul>
7	<b>Prerequisites</b>	Strongly recommended: Successful participation in all mandatory modules (35 ECTS) and at least 20 ECTS from mandatory elective modules
8	<b>Integration in curriculum</b>	semester: 4
9	<b>Module compatibility</b>	Pflichtmodul Master of Science Computational and Applied Mathematics 20192
10	<b>Method of examination</b>	schriftlich (6 Monate) mündlich (15 min) *
11	<b>Grading procedure</b>	schriftlich (90%) mündlich (10%)
12	<b>Module frequency</b>	Every semester
13	<b>Resit examinations</b>	The exams of this moduls can only be resit once.
14	<b>Workload in clock hours</b>	Contact hours: 15 h Independent study: 735 h
15	<b>Module duration</b>	1 semester

16	<b>Teaching and examination language</b>	english
17	<b>Bibliography</b>	Individual, depending on topic of Masters Thesis.

1	<b>Module name</b> 65894	<b>Mathematical Foundations of Control and Machine Learning</b>	<b>5 ECTS</b>
2	Courses / lectures	Vorlesung mit Übung: Mathematical Foundations of Control and Machine Learning (2,5 SWS)	5 ECTS
3	Lehrende	Prof. Dr. Enrique Zuazua Iriondo Zhengping Ji	

4	<b>Module coordinator</b>	Prof. Dr. Enrique Zuazua Iriondo	
5	<b>Contents</b>	This course provides a unified mathematical perspective on control theory and machine learning. It introduces key concepts from the analysis of dynamical systems governed by Ordinary and Partial Differential Equations (ODEs and PDEs), including controllability, observability, and stability. Building on these principles, the course explores how control-theoretic and optimization-based methods provide insight into the dynamics of state-of-the-art machine learning systems, including deep neural networks, federated learning frameworks, and large language models (LLMs).	
6	<b>Learning objectives and skills</b>	By the end of the course, students will have developed a solid understanding of the mathematical and dynamical foundations underlying control and learning systems. They will be able to analyze the optimization and stability properties of deep learning algorithms, and explain how control-theoretic principles extend to large-scale models such as large language models (LLMs). Furthermore, students will be trained to deliver clear and rigorous scientific presentations of technical concepts and research results.	
7	<b>Prerequisites</b>	Strongly recommended: Basic knowledge of calculus, linear algebra, ODE and PDE.	
8	<b>Integration in curriculum</b>	no integration in curriculum available!	
9	<b>Module compatibility</b>	<p>Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192  Specialisation: Modeling and applied analysis (MAPA) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192  Specialisation: Numerical analysis and simulation (NASi) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192</p> <p>Mandatory elective module for MSc in DataScience in the field of study "Simulation and Numerics"</p> <p>Mandatory elective module for MSc in Computational and Applied Mathematics in the specialization "OPTI"</p>

4	<b>Module coordinator</b>	Prof. Dr. Emil Wiedemann	
5	<b>Contents</b>	<p>The incompressible Navier-Stokes equations (NSE) are a nonlinear system of partial differential equations fundamental for the modelling of fluid flow. They are extensively used in meteorology and oceanography, but also pose great mathematical challenges. Famously, global regularity of the three-dimensional NSE forms one of the seven Millennium Problems. This course serves as an introduction to the mathematical theory of these equations and includes the following topics:</p> <ul style="list-style-type: none"> <li>• existence of weak solutions of Leray-Hopf type;</li> <li>• local-in-time existence of strong solutions;</li> <li>• the Prodi-Serrin criteria for regularity and energy balance;</li> <li>• partial regularity theory;</li> <li>• the singular limit of vanishing viscosity.</li> </ul> <p>The course can be a good preparation for a subsequent master's thesis in the topic.</p>	
6	<b>Learning objectives and skills</b>	Students know and understand the basic theory of the Navier-Stokes equations and have mastered important methods for systems of non-linear partial differential equations. They have a basic understanding of mathematical fluid dynamics.	
7	<b>Prerequisites</b>	Lineare Algebra, Analysis. Empfohlen: erste Kurse in partiellen Differentialgleichungen und Funktionalanalysis.	
8	<b>Integration in curriculum</b>	semester: 1

1	<b>Module name</b> 65838	<b>Neural Network Theory</b>	<b>5 ECTS</b>
2	Courses / lectures	Vorlesung: Neural Network Theory (3 SWS) Übung: Übung zu Neural Network Theory (1 SWS)	4 ECTS 1 ECTS
3	Lehrende	PD Dr. Cornelia Schneider	

4	<b>Module coordinator</b>	PD Dr. Cornelia Schneider
5	<b>Contents</b>	<p>In this lecture, we will study deep neural networks. We will focus on a functional analytical and well-founded framework which allows to make rigorous statements which do provide explanations and intuition as to why certain neural network architectures are preferable over others. For example, we will see explanations of why deep neural networks are, in some sense, superior to shallow neural networks or why the neural network architecture can efficiently reproduce high dimensional functions when most classical approximation schemes cannot. The lecture covers the basics of the following topics:</p> <ul style="list-style-type: none"> <li>• Classical approximation results by neural networks</li> <li>• ReLU networks</li> <li>• The role of depth</li> <li>• High dimensional approximation</li> <li>• Complexity of sets of networks</li> <li>• Spaces of realisations of neural networks</li> </ul> <p>The presentation of the material is in lecture form. The essential terms and techniques are acquired through exercises and homework.</p>
6	<b>Learning objectives and skills</b>	Students gain a mathematical understanding of the structure and principles of neural networks.
7	<b>Prerequisites</b>	Linear Algebra I and Analysis I+II or Mathematics for Data Science I +II or comparable; Functional Analysis or Higher Analysis are strongly recommended.
8	<b>Integration in curriculum</b>	no Integration in curriculum available!
9	<b>Module compatibility</b>	<p>Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192 Specialisation: Modeling and applied analysis (MAPA) and numerical analysis and simulation (NASi) Master of Science Computational and Applied Mathematics 20192 Specialisation: Numerical analysis and simulation (NASi) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192</p> <p>Specialization: Analysis and Stochastics or Modeling, Simulation, and Optimization (M.Sc. Mathematics) Specialization: NaSi (CAM)</p>

3	Lehrende	Sebastian Denzler Prof. Dr. Frauke Liers-Bergmann	

4	<b>Module coordinator</b>	Prof. Dr. Frauke Liers-Bergmann	
5	<b>Contents</b>	<p>This course focuses on modeling and solving real-world optimization problems occurring in industry and economics. Advantages and disadvantages of different modeling techniques will be outlined. In order to achieve efficient solution approaches, different reformulations and their numerical results will be discussed. Students will learn how to present optimization results properly as well as how to interpret and evaluate these results for practical applications. The latter may include but is not limited to the optimization of transport networks (gas, water, energy), air traffic management and mathematical modeling/optimization of market mechanisms in the energy sector.</p>	
6	<b>Learning objectives and skills</b>	<p>Students</p> <ul style="list-style-type: none"> <li>• model complex real-world optimization problems with respect to efficient</li> <li>• solvability,</li> <li>• classify the models and use appropriate solution strategies,</li> <li>• evaluate the achieved computational results.</li> </ul>	
7	<b>Prerequisites</b>	Recommended: Modul LKOpt: Linear and combinatorial optimization	
8	<b>Integration in curriculum</b>	semester: 1

1	<b>Module name</b> 65877	<b>Polynomial Optimization and Application</b>	<b>5 ECTS</b>
2	Courses / lectures	Zu diesem Modul sind in diesem Semester keine Lehrveranstaltungen oder Lehrveranstaltungsgruppen hinterlegt!	
3	Lehrende	No lecturers available since there are no courses / lectures for this module for this semester!	

4	<b>Module coordinator</b>	Prof. Dr. Giovanni Fantuzzi	
5	<b>Contents</b>	<p>Polynomial optimization problems (POPs) form a broad class of optimization problems that find applications to control theory, dynamical systems, optimal transport, power flow networks, fluid mechanics, and many other fields. This course will introduce students to a modern approach to solving POPs through semidefinite programming techniques. More specifically, the course will cover:</p> <ul style="list-style-type: none"> <li>• The basics of semidefinite programs</li> <li>• The theory of sum-of-squares (SOS) polynomials</li> <li>• Moment-SOS hierarchies for polynomial optimization problems</li> <li>• Applications (e.g. to dynamical system analysis)</li> </ul> <p>Students will also have the opportunity to put the theory into practice with “hands-on” practical assignments.</p>	
6	<b>Learning objectives and skills</b>	<p>By the end of the course, students should be able to:</p> <ul style="list-style-type: none"> <li>• Explain what polynomial optimization problems (POPs) are</li> <li>• Give examples of applications where POPs arise</li> <li>• Formulate semidefinite programming relaxations of POPs</li> <li>• Apply moment-SOS hierarchies to a range of problems</li> <li>• Solve POPs in practice using existing software</li> </ul>	
7	<b>Prerequisites</b>	Previous experience with optimization (especially convex and/or conic optimization) and with differential equations is desirable.	
8	<b>Integration in curriculum</b>	semester: 1;3	
9	<b>Module compatibility</b>	<p>Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192  Specialisation: Modeling and applied analysis (MApA) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192  Specialisation: Numerical analysis and simulation (NASi) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192</p>	
10	<b>Method of examination</b>	mündlich (30 Minuten)	
11	<b>Grading procedure</b>	mündlich (100%)	
12	<b>Module frequency</b>	Only in winter semester

Lecture notes will be distributed via StudOn.

1	<b>Module name</b> 65789	<b>Selected Topics in Mathematics of Learning</b> Selected topics in mathematics of learning	<b>5 ECTS</b>
2	Courses / lectures	Vorlesung: Selected Topics in Mathematics of Learning (2 SWS) (WiSe 2025) Übung: Übung Selected Topics in Mathematics of Learning (2 SWS) (WiSe 2025)	3 ECTS 2 ECTS
3	Lehrende	Prof. Dr. Marie-Christine Düker Dr. Yuhan Tian	

4	<b>Module coordinator</b>	Prof. Dr. Frauke Liers-Bergmann
5	<b>Contents</b>	Advanced methods of mathematical data science, with a focus on teaching mathematical principles of learning processes.
6	<b>Learning objectives and skills</b>	Students gain fundamental theoretical knowledge of learning algorithms in Data Science and will be able to apply the methodologies in a Data Science context.
7	<b>Prerequisites</b>	Basic knowledge in numerical methods and optimization are recommended.
8	<b>Integration in curriculum</b>	semester: 1;3
9	<b>Module compatibility</b>	Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192 Specialisation: Modeling and applied analysis (MApA) and numerical analysis and simulation (NASi) Master of Science Computational and Applied Mathematics 20192 Specialisation: Numerical analysis and simulation (NASi) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192
10	<b>Method of examination</b>	Klausur (60 Minuten)
11	<b>Grading procedure</b>	Klausur (100%)
12	<b>Module frequency</b>	Only in winter semester
13	<b>Workload in clock hours</b>	Contact hours: 60 h Independent study: 90 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	S. Wright, B. Recht: Optimization for Data Analysis (2022).

1	<b>Module name</b> 65787	<b>Seminar Applied Analysis</b> Seminar: Applied analysis	<b>5 ECTS</b>
2	Courses / lectures	Hauptseminar / Masterseminar: Seminar Applied Analysis - t.b.a. (2 SWS)	5 ECTS
3	Lehrende	Prof. Dr. Günther Grün	

4	<b>Module coordinator</b>	Prof. Dr. Günther Grün
5	<b>Contents</b>	Topics from <i>Applied Analysis</i> to deepen the theoretical contents of the lecture <i>ModAna1</i>
6	<b>Learning objectives and skills</b>	Students <ul style="list-style-type: none"> <li>• are able to familiarize themselves with advanced topics using journal articles or graduate textbooks,</li> <li>• can present the acquired content orally in a structured manner, with, if necessary, own additions in content,</li> <li>• actively participate at discussions about mathematical topics raised by the presentations in the seminar.</li> </ul>
7	<b>Prerequisites</b>	Module <i>ModAna1</i> is recommended
8	<b>Integration in curriculum</b>	semester: 2
9	<b>Module compatibility</b>	Specialisation: Modeling and applied analysis (MAPa) and numerical analysis and simulation (NASi) Master of Science Computational and Applied Mathematics 20192 Specialisation: Modeling and applied analysis (MAPa) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192 Mandatory elective module in M.Sc. Computational and Applied Mathematics
10	<b>Method of examination</b>	Seminarleistung Oral presentation (90min) and presentation document (4-8 pages) *
11	<b>Grading procedure</b>	Seminarleistung (100%) Oral presentation (80%), presentation document (20%)
12	<b>Module frequency</b>	Irregular
13	<b>Workload in clock hours</b>	Contact hours: 30 h Independent study: 120 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	Determined by the topic chosen

1	<b>Module name</b> 65071	<b>Seminar on Evolution Equations</b> Seminar: Evolution equations	<b>5 ECTS</b>
2	Courses / lectures	Zu diesem Modul sind in diesem Semester keine Lehrveranstaltungen oder Lehrveranstaltungsgruppen hinterlegt!	
3	Lehrende	No lecturers available since there are no courses / lectures for this module for this semester!	

4	<b>Module coordinator</b>	Prof. Dr. Günther Grün	
5	<b>Contents</b>	<p>Topics in the complex of evolution equations, depending on the interest and previous knowledge of the attending students; possible topics include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• semigroups of operators (Hille-Yosida theorem, Stone theorem, analytic semigroups, )</li> <li>• variational methods and Galerkin scheme</li> <li>• theory of Bochner function spaces (embeddings, Aubin-Lions-Simon compactness)</li> </ul>	
6	<b>Learning objectives and skills</b>	<p>Students</p> <ul style="list-style-type: none"> <li>• work on and investigate an advanced topic in the complex of evolution equations,</li> <li>• report on and present their findings about their topic both orally and in written form by using appropriate means for presentation and communication,</li> <li>• understand the relationship and scope of their particular topic related to others considered within the complex of evolution equations,</li> <li>• discuss their and other participants topics and converse with the lecturer about questions and insights on an appropriate level</li> </ul>	
7	<b>Prerequisites</b>	Recommended: Functional Analysis, Differential Equations, basics in Lebesgue integration	
8	<b>Integration in curriculum</b>	semester: 1	
9	<b>Module compatibility</b>	Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192	
10	<b>Method of examination</b>	Seminarleistung	
11	<b>Grading procedure</b>	Seminarleistung (100%)	
12	<b>Module frequency</b>	Only in summer semester	
13	<b>Workload in clock hours</b>	Contact hours: 21 h Independent study: 129 h	
14	<b>Module duration</b>	1 semester	
15	<b>Teaching and examination language</b>	english	
16	<b>Bibliography</b>	Will be announced at a first meeting, depending on the topics considered	

1	<b>Module name</b> 65096	<b>Seminar Selected Topics of Applied Analysis</b> Seminar: Selected topics of applied analysis	<b>5 ECTS</b>
2	Courses / lectures	Hauptseminar / Masterseminar: Seminar Selected topics of applied analysis and Masterseminar MApA/ NASi (2 SWS)	5 ECTS
3	Lehrende

		Independent study: 120 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	Determined by the topic chosen

1	<b>Module name</b> 65970	<b>Stochastische Analysis</b> Stochastic analysis	<b>5 ECTS</b>
2	Courses / lectures	Vorlesung: Stochastische Analysis (2 SWS) (WiSe 2025) Übung: Übung zur Stochastischen Analysis (2 SWS) (WiSe 2025)	5 ECTS -
3	Lehrende	Prof. Dr. Torben Krüger	

4	<b>Module coordinator</b>	Prof. Dr. Torben Krüger
5	<b>Contents</b>	<ul style="list-style-type: none"> <li>• Itokalkulus</li> <li>• Diffusionsprozesse</li> <li>• Stochastische Differentialgleichungen</li> <li>• Die Präsentation des Stoffes erfolgt in Vorlesungsform.</li> </ul>
6	<b>Learning objectives and skills</b>	Die Studierenden erwerben die Fähigkeit komplexere Strukturen der Stochastik selbständig zu erfassen und auf exemplarische Problemstellungen anzuwenden. Diese bilden eine Basis für eine Spezialisierung in Stochastik undentsprechenden wirtschaftsmathematischen Themen.
7	<b>Prerequisites</b>	empfohlen: Kenntnisse der Wahrscheinlichkeitstheorie sind zum Verständnis hilfreich
8	<b>Integration in curriculum</b>	semester: 1
9	<b>Module compatibility</b>	Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192 Specialisation: Modeling and applied analysis (MApA) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192
10	<b>Method of examination</b>	mündlich Dauer der mündlichen Prüfung: 15 Min. *
11	<b>Grading procedure</b>	mündlich (100%)
12	<b>Module frequency</b>	Only in winter semester
13	<b>Workload in clock hours</b>	Contact hours: 60 h Independent study: 90 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	german
16	<b>Bibliography</b>	Die vorbereitende Literatur wird für jede Lehrveranstaltung jedes Semester neu festgelegt.

1	<b>Module name</b> 65909	<b>Subspace correction methods</b>	<b>5 ECTS</b>
2	Courses / lectures	Zu diesem Modul sind in diesem Semester keine Lehrveranstaltungen oder Lehrveranstaltungsgruppen hinterlegt!	
3	Lehrende	No lecturers available since there are no courses / lectures for this module for this semester!	

4	<b>Module coordinator</b>	Prof. Dr. Carsten Gräser	
5	<b>Contents</b>	1) Subspace correction as an abstract framework to construct and analyse efficient iterative methods 2) Analysis of additive and multiplicative subspace correction 3) Multigrid and domain decomposition as subspace correction methods 4) Nonlinear subspace correction methods	
6	<b>Learning objectives and skills</b>	Students are <ul style="list-style-type: none"> <li>• familiar with the abstract subspace correction framework</li> <li>• can select problem adapted methods</li> <li>• can analyse specific methods within the framework</li> </ul>	
7	<b>Prerequisites</b>	Recommended: Introduction to numerical methods for PDEs Recommended: Basic knowledge of functional analysis (but the necessary terminology and results are briefly provided during the lecture)	
8	<b>Integration in curriculum</b>	semester: 2	
9	<b>Module compatibility</b>	Non-Specialisation modules Master of Science Computational and Applied Mathematics 20192 Specialisation: Modeling and applied analysis (MAPA) and numerical analysis and simulation (NASi) Master of Science Computational and Applied Mathematics 20192 Specialisation: Numerical analysis and simulation (NASi) and optimization (Opti) Master of Science Computational and Applied Mathematics 20192	
10	<b>Method of examination</b>	mündlich (15 Minuten) oral exam (15 min) *	
11	<b>Grading procedure</b>	mündlich (100%) 100% based on oral exam	
12	<b>Module frequency</b>	Irregular	
13	<b>Workload in clock hours</b>	Contact hours: 30 h Independent study: 120 h	
14	<b>Module duration</b>	1 semester	
15	<b>Teaching and examination language</b>	english
