

# Module description

for the degree programme

Master of Science Data Science

(Version of examination regulation: 20212)

for the summer term 2026

flat version (only modules, no levels  
(Konten)), in alphabetical order

# Table of contents

Advanced business analytics seminar (65985).....	6
Advanced deep learning (93873).....	8
Advanced machine learning for anomaly detection (47685).....	10
Advanced methods: Advanced climate data analysis (46080).....	12
Advanced methods: Microwave remote sensing (46110).....	13
Advanced methods: Modeling physical systems in the climate (46085).....	14
Advanced methods: Remote sensing: Spectroscopy and analysis of spectral data (46120).....	16
Advanced methods: Scripting for GIS analysis (46115).....	17
Advanced methods: Scripting for remote sensing of the environment (46090).....	19
Advanced methods: Soil science (46125).....	20
Advanced methods: Stable isotope analysis (46130).....	21
Advanced methods: Tree-ring analysis - Applied dendroecology (46095).....	22
Advanced semiconductor technologies - Photovoltaic systems I - Fundamentals (46257).....	23
Advanced solution techniques (AdSolTech) (65987).....	25
Advanced topic in probability (65065).....	26
Advanced topics in deep learning (42800).....	28
Advanced topics in perceptual audio coding (96875).....	30
Advances in Medical Systems Biology (AdvMedSys) (47697).....	32
AI-1 Systems project (93116).....	34
AI-2 Systems project (93117).....	36
AI in medical robotics (93101).....	38
Algorithmic Bioinformatics (47678).....	40
Algorithms and data structures (93054).....	42
Algorithms and data structures (93055).....	44
Algorithms of numerical linear algebra (352989).....	46
A look inside the human body - gait analysis and simulation (96837).....	47
Analysing and understanding data in DH (39165).....	49
Applied data science in medicine & psychology (47544).....	52
Approximate computing (965820).....	54
Approximation theory (65886).....	56
Architectures of supercomputers (44460).....	58
Artificial intelligence I (535405).....	60
Artificial intelligence II (532733).....	62
Big Data seminar (93138).....	65
CE-V3: Models in paleobiology and phylogenetics (68966).....	66
Climate and earth systems research lab IV (68973).....	67
Clinical data science (22991).....	68
Collecting data in DH (39155).....	70
Colloquium lecture: Digital sovereignty (65088).....	72
Computational imaging project (43932).....	74
Computational magnetic resonance imaging (93109).....	75
Computational Medicine I (96838).....	77
Computational neurotechnology / Numerical neurotechnology (44200).....	79
Computational physics and numerical methods (67080).....	81
Computer architecture (798810).....	82
Computer architectures for deep-learning applications (93111).....	84
Computer communications (93150).....	86
Computer graphics (43822).....	88

Computer vision (713618).....	91
Conceptual modelling (93130).....	93
Control, machine learning and numerics (65093).....	95
Control of partial differential equations (65869).....	97
Convex Geometry (65066).....	99
Convex geometry and applications (65086).....	101
Cryptography for teaching degrees (65085).....	102
Cryptography I (65979).....	104
Cryptography II (65980).....	106
Data Acquisition, Processing and Analysis in Manufacturing Engineering and Material Science (vhb) (93480).....	107
Data-driven methods for dynamical systems (65876).....	109
Data Governance Applications (65794).....	111
Data Governance Foundations (65793).....	113
Data science survival skills (47677).....	115
Decision Theory (65064).....	117
Deep learning (901895).....	119
DH specialisation (39150).....	121
DH specialisation (39195).....	123
Differential geometry (65879).....	125
Digital Chemistry (46538).....	127
Digital signal processing (93500).....	129
Discrete optimization I (65917).....	131
Discrete optimization II (65922).....	132
Discrete optimization II (65933).....	134
Discrete optimization III (65910).....	136
Distributed databases and transaction systems (681735).....	138
Dynamical System Theory for Data Scientists (65872).....	141
Einführung in die Bioinformatik für die Translationale Medizin (741318).....	143
EMC Measurement Techniques (47579).....	145
Energy Informatics and Smart Grids (93042).....	147
Enterprise Application Development and evolutionary information systems (47576).....	149
Ethics and Philosophy of AI (47601).....	152
Experimental physics 1 + 2: Mechanics, thermodynamics and electrodynamics (66063).....	153
Experimental physics 1: Mechanics (66065).....	157
Fantastic datasets and where to find them (93174).....	158
Foundations of anatomy and physiology (22802).....	160
Foundations of computer architecture and computer organisation (93080).....	162
Foundations of linked data (57320).....	164
Functional analysis (65110).....	166
Geometric Numerical Integration (97278).....	168
Geometry of manifolds (65976).....	171
Global illumination (43375).....	172
Higher Analysis (65857).....	174
Hot topics in web technologies and the Internet of Things (57458).....	176
Human computer interaction (645618).....	177
Human-machine interaction in DH (39170).....	180
Image and video compression (96310).....	181
Image, video and multidimensional signal processing (96312).....	183
Implementation of database systems (93020).....	185
Implementing innovation (83466).....	188
Information theory and coding (48410).....	189

Innovation and leadership (57053).....	192
Interactive computer graphics (43371).....	194
Interfacing the neuromuscular system: Applications for Human/machine interfaces and neurophysiology (44157).....	196
Introduction to control and machine learning (65067).....	198
Introduction to Cybersecurity Fundamentals in Networking (93074).....	200
Introduction to material- and shape optimization (65915).....	202
Introduction to representation theory (65070).....	203
Introduction to simulation, network and data analysis in Medical Systems Biology (47703).....	205
Knowledge discovery in databases with tutorial (43961).....	207
Knowledge representation and -processing (635405).....	209
Lab course machine learning in signal processing (878210).....	211
Laboratory course: Image and video signal processing on embedded platforms (97525).....	213
Laborpraktikum Multimediatechnik (97651).....	215
Lecture and advanced tutorial: Middleware - Cloud computing (722831).....	217
Lie algebras (65981).....	220
Machine learning in clinical bioinformatics (92270).....	221
Machine learning in signal processing (48440).....	223
Magnetic resonance imaging (122337).....	225
Magnetic resonance imaging 2 + exercise (568977).....	226
Managing global projects and information technology (57060).....	228
Master's seminar (Data science) (65786).....	231
Master's thesis (1999).....	233
Materials and structure (92775).....	234
Materials informatics (46274).....	236
Mathematical foundations of artificial intelligence, neural networks and data analytics (65133).....	237
Mathematical foundations of Artificial Intelligence, Neural Networks and Data Analytics II (65723).....	239
Mathematical Foundations of Control and Machine Learning (65894).....	241
Mathematical Image Processing (48241).....	244
Mathematical statistics (65969).....	246
Mathematics for data science 1 (65711).....	247
Mathematics for data science 2 (65712).....	249
Mathematics of learning (65785).....	251
Medical engineering II (imaging techniques) (95811).....	252
Medical terminologies and ontologies (22932).....	254
Methods of Advanced Data Engineering (VUE 5-ECTS) (93641).....	255
Modeling, simulation and optimization (65870).....	257
Motion analysis and biomechanical boundary areas (47666).....	259
Movement Neuroscience: Connections between brain and muscles in humans (47674).....	261
Music processing - Analysis (96890).....	263
Music processing analysis - Lecture and exercise (639119).....	266
Music processing - synthesis (96895).....	269
Nailing your thesis (VUE 5-ECTS) (480491).....	271
Network medicine (47673).....	273
Neural Network Theory (65838).....	274
Optimisation project with computer exercises (Master) (562819).....	276
Optimization in industry and economy (65923).....	278
Parallel and functional programming (93040).....	280

Partial differential equations I (65123).....	282
Partial differential equations II (409733).....	283
Patenting for innovation (57172).....	285
Pattern analysis (44120).....	286
Pattern recognition (44130).....	288
Probability theory (65091).....	290
Process analytics (PA) (54760).....	292
Process-oriented information systems (675090).....	293
Project: Biomedical network science (47676).....	297
Project (Data science) (65788).....	299
Project machine learning and data analytics (924553).....	300
Project music and audio processing (93164).....	302
Project on applied AI in factory automation and production systems (AI-FAPS) (47686).....	303
Project optimization (Data science) (65836).....	305
Project: Pattern recognition (628205).....	307
Project: Representation learning (93112).....	309
Quality of service in communication systems (44361).....	311
Quantum chemistry 1 (46559).....	313
Quantum chemistry 2 (46561).....	314
Quantum computing (67156).....	315
Random matrices in communications and signal processing (451971).....	317
Reinforcement learning (93185).....	319
Robotics in surgery and diagnostics (47708).....	321
Robust optimization (65720).....	323
Robust optimization II (65918).....	324
Scientific programming (46556).....	325
Selected topics in mathematics of learning (65789).....	327
Seminar AI and digitalization in healthcare (47626).....	328
Seminar AIBE (65867).....	330
Seminar and laboratory course: Biosignal processing (96835).....	331
Seminar: Fantastic datasets and where to find them (47586).....	334
Seminar Machine Learning / Artificial Intelligence (65866).....	336
Seminar: Machine learning in MRI (47619).....	337
Seminar RMA (65896).....	338
Seminar: Visual computing (96970).....	341
Simulation and modelling I (97090).....	343
Simulation and Modelling II (97400).....	345
Simulation and scientific computing 1 (43370).....	346
Simulation und Wissenschaftliches Rechnen 2 (43870).....	348
Sovereignty and public sphere (65945).....	350
Specialisation module: Computational linguistics in practice (74288).....	352
Specialization module: Computational linguistics II (74355).....	354
Speech and Language Processing (44455).....	355
Statistical signal processing (96430).....	357
Stochastic analysis (65970).....	359
Theory of neural dynamics and applications to machine learning based on reservoir computing (65884).....	360
Tracking Olympiad (47612).....	362
Transforms in signal processing (498723).....	364
Trustworthy artificial intelligence (65940).....	366
Virtual vision (96314).....	368
Visualising data in DH (39160).....	370

1	<b>Module name</b> 65985	<b>Advanced Business Analytics Seminar</b> Advanced business analytics seminar	<b>5 ECTS</b>
2	Courses / lectures	Seminar: Advanced Business Analytics Seminar (2 SWS)	5 ECTS
3	Lehrende		

4	<b>Module coordinator</b>	Dr. Pavlina Kröckel	
5	<b>Contents</b>	<p>The problems faced by decision makers in today's competitive business environment are complex and multi-faceted, and often require skills that go beyond theoretical data science knowledge. Solving such problems effectively requires the employment of a structured approach to business problem-solving.</p> <p><b>Advanced Analytics</b> is defined by Gartner as <i>"the autonomous or semi-autonomous examination of data or content using sophisticated techniques and tools, typically beyond those of traditional business intelligence (BI), to discover deeper insights, make predictions, or generate recommendations."</i></p> <p>Advanced Analytics refers to the fields of Machine Learning, Predictive Analytics, Process Mining, Text Mining, and Social Network Analysis, to name a few. It is presumed that participants are familiar with the theoretical concepts from one or more of the mentioned data science areas. The focus of the seminar is on the application of those concepts on given use cases from industry.</p> <p>This course is mostly organized as a self-study. Work will be done in groups of three to five students.</p> <p>All topics are presented and explained in the kick-off session, as well as organizational issues and other relevant information.</p> <p>Teams will have to present their progress on the chosen topic.</p>	
6	<b>Learning objectives and skills</b>	<p>Students gain practical skills in extracting and manipulating structured and unstructured data, executing methods for descriptive, predictive, or prescriptive analysis, and effectively interpreting and presenting analytic results. Thus, students do not only get hands-on technical experience but also gain domain knowledge and learn soft-skills relevant for data scientist (e.g., teamwork, critical thinking, storytelling).</p> <p>For <b>students without technical knowledge</b>, we will also offer topics requiring literature review, case study analysis or conceptual design.</p> <p>Whenever possible, we assign topics that are currently important for our cooperation partners.</p>	
7	<b>Prerequisites</b>	<p>For the technical topics:</p> <ul style="list-style-type: none"> <li>• Students should have at least introductory level data mining and machine learning knowledge.</li> <li>• Preference is given to students who have taken the Business Intelligence lecture offered in the summer semester.</li> </ul> <p>For non-technical topics: no pre-requisites.</p> <p><b>Registration via StudOn is required.</b> The registration period is announced for each semester and all students who register in this</p>	

		timeframe have <b>equal chances</b> to be admitted. Thus, an early registration does not guarantee a place in the seminar.
8	<b>Integration in curriculum</b>	semester: 2
9	<b>Module compatibility</b>	International Information Systems Master of Science Data Science 20212
10	<b>Method of examination</b>	<p>Seminarleistung</p> <ul style="list-style-type: none"> <li>• The seminar is mostly organized online. Presence (online) is expected during the kick-off lecture in the beginning of the semester, the mid-term presentations and other appointments individually arranged with the topic supervisor.</li> <li>• Participation in the mid-term presentation is mandatory. If this condition is not fulfilled, further participation in the seminar will not be allowed.</li> </ul> <p>*</p>
11	<b>Grading procedure</b>	<p>Seminarleistung (100%)</p> <p>The grade is based on the final presentation and participation and engagement during the semester.</p>
12	<b>Module frequency</b>	Every semester
13	<b>Workload in clock hours</b>	<p>Contact hours: 30 h</p> <p>Independent study: 120 h</p>
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	Relevant literature will be given during the seminar.

1	<b>Module name</b> 93873	<b>Advanced Deep Learning</b> Advanced deep learning	<b>5 ECTS</b>
2	Courses / lectures	Vorlesung: Advanced Deep Learning (2 SWS) (WiSe 2025) Übung: Advanced Deep Learning Exercises (2 SWS) (WiSe 2025)	5 ECTS -
3	Lehrende	Dr.-Ing. Vincent Christlein	

4	<b>Module coordinator</b>	Dr.-Ing. Vincent Christlein	
5	<b>Contents</b>	<p>Deep Learning-based algorithms showed great performance in many fields of image processing and pattern recognition and compete with technologies such as compressive sensing and iterative optimization. The basis for the success of these algorithms is the availability of large amounts of data (big data) for training and of high computing power (typically GPUs or TPUs).</p> <p>In this course we will explore advanced deep learning methods. In particular, we will aim to develop a deeper understanding of topics beyond SGD optimization, CNNs and simple RNN networks, for example: attention in neural networks, self- and unsupervised learning, representation learning, multi-task and multi-modal learning, as well as diffusion and energy-based models. The selection of topics will be continuously adapted to reflect current research interests at high-impact conferences like CVPR, ICCV/ECCV, NeurIPS, ICLR and ICML. The goal of this is course is to develop both a sound theoretical understanding of these approaches and identify areas of application for these advanced techniques. This will be complemented by programming exercises to facilitate an in-depth understanding. Where suitable, we will further discuss ethical and societal implications of the discussed machine learning methods.</p>	
6	<b>Learning objectives and skills</b>	<p>By the end of this course, students will be able to:</p> <ul style="list-style-type: none"> <li>• understand advanced techniques in deep learning</li> <li>• identify a suitable approach as well as its benefits and shortcomings</li> <li>• discuss the technical requirements of different approaches</li> <li>• read and discuss recent papers in the discipline</li> </ul>	
7	<b>Prerequisites</b>	<p>We strongly recommend students to have acquired a thorough understanding of fundamental Machine Learning and Deep Learning techniques, e.g., from the lecture + exercises "Deep Learning".</p> <p>Furthermore, programming experience in Python and Pytorch will be necessary to complete the exercises.</p>	
8	<b>Integration in curriculum</b>	semester: 1	
9	<b>Module compatibility</b>	Studienrichtung Machine Learning / Artificial Intelligence Master of Science Data Science 20212	
10	<b>Method of examination</b>	Übungsleistung Klausur (60 Minuten)	

11	<b>Grading procedure</b>	Übungsleistung (bestanden/nicht bestanden) Klausur (100%)
12	<b>Module frequency</b>	Only in winter semester
13	<b>Workload in clock hours</b>	Contact hours: 60 h Independent study: 90 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	

1	<b>Module name</b> 47685	<b>Advanced machine learning for anomaly detection</b>	<b>5 ECTS</b>
2	Courses / lectures	Hauptseminar: Advanced Machine Learning for Anomaly Detection (2 SWS) (WiSe 2025) yes for intro sessions and the presentation sessions	5 ECTS
3	Lehrende	Prof. Dr. Bernhard Kainz Johanna Müller	

4	<b>Module coordinator</b>	Prof. Dr. Bernhard Kainz
5	<b>Contents</b>	<p>Anomaly and out-of-distribution detection is becoming an important new paradigm in machine learning. We will discuss recent approaches in the area and critically analyse research papers.</p> <p>Syllabus This is a journal club style seminar about recent research results. Students will present different state-of-the-art anomaly detection approaches in various domains and are expected to join the weekly discussion round.</p> <p>Human-in-the-Loop Machine Learning describes processes in which humans and Machine Learning algorithms interact to solve one or more of the following: Making Machine Learning more accurate Getting Machine Learning to the desired accuracy faster Making humans more accurate Making humans more efficient</p> <p>Aim of this seminar is to give students insights about state-of-the-art Active Learning and interactive data analysis methods. Students will work independently on specific topics including implementation and analytical components alongside student-led lectures delivered by guest lectures and flipped classroom sessions, where students explore a topic independently, which is then discussed in class. Several potential topics will be provided but students are also encouraged to propose their own topics (after discussion with course lead).</p> <p>Topics covered will include but are not limited to:</p> <ul style="list-style-type: none"> <li>• generative model</li> <li>• self-supervised methods</li> <li>• deep representation learning</li> <li>• self-organising systems</li> <li>• Active Learning Strategies</li> <li>• Uncertainty Sampling</li> <li>• Diversity Sampling</li> <li>• Annotating Data for Machine Learning</li> <li>• Who are the right people to annotate your data?</li> <li>• Quality control for data annotation</li> <li>• User interfaces for data annotation</li> <li>• Transfer Learning and Pre-Trained Models</li> <li>• What are Embeddings?</li> <li>• What is Transfer Learning?</li> <li>• Adaptive Learning</li> </ul>

		<ul style="list-style-type: none"> <li>Machine-Learning for aiding human annotation</li> <li>Advanced Human-in-the-Loop Machine Learning</li> </ul>
6	<b>Learning objectives and skills</b>	<p>Students will be able to</p> <ul style="list-style-type: none"> <li>perform their own literature research on a given subject</li> <li>independently research this subject</li> <li>present and introduce the subject to their student peers</li> <li>give a scientific talk in English according to international conference standards</li> </ul>
7	<b>Prerequisites</b>	You should have very solid programming skills and have knowlege in machine learning, deep learning and computer vision methods.
8	<b>Integration in curriculum</b>	semester: 1
9	<b>Module compatibility</b>	Studienrichtung Machine Learning / Artificial Intelligence Master of Science Data Science 20212
10	<b>Method of examination</b>	<p>Seminarleistung Seminarleistung</p> <ul style="list-style-type: none"> <li>Presentation and Q&amp;A (20 min)</li> <li>1 Page protocol about experiments/code extensions</li> </ul> <p>*</p>
11	<b>Grading procedure</b>	<p>Seminarleistung (100%) Seminarleistung (100%)</p> <ul style="list-style-type: none"> <li>80% of grade: Presentation and Q&amp;A (20 min)</li> <li>20% of grade: 1 Page protocol about experiments/code extensions</li> </ul>
12	<b>Module frequency</b>	Only in winter semester
13	<b>Workload in clock hours</b>	Contact hours: 30 h Independent study: 120 h

1	<b>Module name</b> 46257	<b>Advanced Semiconductor Technologies - Photovoltaic Systems I - Fundamentals</b> Advanced semiconductor technologies - Photovoltaic systems I - Fundamentals	<b>5 ECTS</b>
2	Courses / lectures	Tutorium: Questionnaire PV Systems 1 (WiSe 2025)	-
3	Lehrende		

4	<b>Module coordinator</b>	Prof. Dr. Christoph Brabec Prof. Dr. Wolfgang Heiß	
5	<b>Contents</b>	<p><b>Lecture / Exercise / Lab work</b></p> <p>The lecture will introduce into the fundamentals of photovoltaic energy conversion. The conversion of light into electricity is one of the most efficient power technologies by today and is expected to transform our energy system towards a renewable scenario. The limits of photovoltaic energy conversion, the materials and architectures of major PV technologies and advanced characterization methods for modules as well as solar fields will be introduced theoretically and experimentally during the lecture, a seminar and the lab works.</p>	
6	<b>Learning objectives and skills</b>	<ul style="list-style-type: none"> <li>The students will learn the concept of black body radiation and the radiation laws and the limits of light energy conversion. The fundamental semiconductor junctions (p-n, M-i-M, Schottky and Hetero Junction) are repeated. The one diode and two diodes replacement circuits are explained. Electrical, optical, recombination and extraction loss mechanisms are discussed separately and demonstrated at the hand of numerical drift-diffusion equation solvers. The most important solar cell concepts (Si, CIGS, CdTe, GaAs, Perovskites, Organics) are introduced, and the strengths and weaknesses of each technology are analysed.</li> <li>To build hands-on knowledge, we also provide exercises, where device characteristics such as current-voltage curves will be simulated and the results will be discussed.</li> </ul>	
7	<b>Prerequisites</b>	Bachelor in Material Science, Nanotechnology, Energy Technology, Electronic Engineering, Computer Science, Physics, Chemistry, Chemical Engineering, or comparable	
8	<b>Integration in curriculum</b>	no Integration in curriculum available!	
9	<b>Module compatibility</b>	Material Science Master of Science Data Science 20212	
10	<b>Method of examination</b>	<p>Variabel</p> <p>Advanced Semiconductor Technologies – Photovoltaic Systems I - Fundamentals (Prüfungsnummer: 62571)</p> <p>Examination performance, oral examination, duration (in minutes): 15, graded, 5 ECTS</p> <p>Share in the calculation of the module grade: 100.0%</p> <p>Alternative examination forms: written exam (90 min). Choice of the examination form is done on the basis of the didactic character of the module. The decision for the examination form will be communicated:</p>	

		<ul style="list-style-type: none"> <li>• in semesters where the lecture takes place: no more than two weeks after lecture start in the lecture and in the StudOn group</li> <li>• in semesters without lecture: at least two weeks before the repetition exam in the StudOn group</li> </ul> <p>*</p>
11	<b>Grading procedure</b>	<p>Variabel (100%)</p> <p>Advanced Semiconductor Technologies – Photovoltaic Systems I - Fundamentals (examination number: 62571)</p> <p>Share in the calculation of the module grade: 100.0 %</p>
12	<b>Module frequency</b>	Only in winter semester

1	<b>Module name</b> 96875	<b>Ausgewählte Kapitel der Audiodatenreduktion</b> Advanced topics in perceptual audio coding	<b>2,5 ECTS</b>
2	Courses / lectures	Vorlesung: Advanced Topics in Perceptual Audio Coding (2 SWS) (WiSe 2025)	2,5 ECTS
3	Lehrende	Prof. Dr.-Ing. Jürgen Herre	

4	<b>Module coordinator</b>	Prof. Dr.-Ing. Jürgen Herre	
5	<b>Contents</b>	<p>Perceptual audio coding is ubiquitous in modern life (mp3 players, mobile phones, DVD players, computers, ...) Based on related classes (esp. Speech and Audio Processing"), this lecture aims at deepening the understanding of modern algorithms for perceptual source coding of audio. It includes an overview of the most relevant standardized coders, starting with MPEG-1 (incl. mp3) via MPEG-4 all the way to the most recent MPEG Audio standard. The significant algorithms are discussed and new approaches are described.</p> <p>The selected topics include:  Efficient coding of several audio channels / parametric multi-channel coding  Typical coding artifacts; subjective and objective quality assessment  Scalable audio coding  Bandwidth extension  Semi-parametric audio coding  Low-delay audio coding  The lecture includes a number of demonstrations and audio examples to illustrate the discussed algorithms.</p>	
6	<b>Learning objectives and skills</b>	<ul style="list-style-type: none"> <li>• Wissen - Die Studenten kennen die Hauptkomponenten eines gehörangepassten Audiocodecs, sowie die wichtigsten Algorithmen, Codierstrategien und Bewertungsmethoden. Weiterhin kennen sie die Terminologie und gängige Abkürzungen aus diesem Kontext.</li> <li>• Verstehen - Die Studenten verstehen, wie Designentscheidungen in Audiocodecs die letztendlich erreichte Audioqualität beeinflussen, verstehen die gebräuchlichsten Tools aus dem Bereich der gehörangepasste Audiocodierung und wie verschiedene Anwendungsszenarien das Coderdesign bestimmen.</li> <li>• Anwenden - Die Studenten können übliche mathematische Analysemethoden verwenden, um einfache Coder-Componenten zu beschreiben und gegebenenfalls zu modifizieren.</li> <li>• Analysieren - Die Studenten können Audiocodierungs-Standards und wahrnehmungsbasierte Messwerkzeuge dazu analysieren um die zugrundeliegenden Konzepte und Anforderungen zu erfassen.</li> <li>• Evaluieren (Beurteilen) - Die Studenten können Audiocodierungs-Standards und wahrnehmungsbasierte Messwerkzeuge evaluieren um zu beurteilen, welcher</li> </ul>	

		<p>Standard bzw. welches Messwerkzeug das passendste ist für einen bestimmten Anwendungsfall.</p> <ul style="list-style-type: none"> <li>• Synthese - Die Studenten können eine Liste von Anforderungen und Bewertungskriterien für Audiocodecs zusammenstellen für gewünschte Anwendungsfälle.</li> <li>• Lern- bzw. Methodenkompetenz - Die Studenten hinterfragen bestehende Ansätze hinsichtlich ihrer Anwendbarkeit in der Praxis.</li> </ul>

3	Lehrende		

4	<b>Module coordinator</b>	Prof. Dr. Julio Vera González
5	<b>Contents</b>	<p>In this subject the students will be introduced to new approaches in medical systems biology. Medical systems biology aims to simulate, to analyse and to discuss biomedical mathematical models. This is a multidisciplinary approach to understand biomedical systems. The following skills are expected from a student that has accomplished this subject.</p> <ul style="list-style-type: none"> <li>• Literature research and discussion as well as performing a critical view of a topic.</li> <li>• The ability to summarize and simplify broad biological information into a theoretical framework.</li> <li>• To create and to simulate a mathematical model.</li> <li>• To discuss the results from an in silico exercise and conclude biological insights from the model.</li> </ul> <p>We evaluate these skills applying the principles of learning-by-doing.</p>
6	<b>Learning objectives and skills</b>	<p>The students are faced to a real problem in biomedicine that they should solve and discuss in a report. The following learning goals should be satisfied to perform this exercise.</p> <ul style="list-style-type: none"> <li>• Learning the basic concepts of molecular biology.</li> <li>• Understanding the principles of systems biology and mathematical modeling.</li> <li>• Applying the concepts of molecular biology to a specific biomedical problem to propose a theoretical framework.</li> <li>• Analyse a real problem in biomedicine and propose a workflow to solve it.</li> <li>• Evaluate the literature to enrich the biomedical knowledge of the theoretical framework.</li> <li>• Create a mathematical model out of the theoretical framework to solve a biomedical problem</li> </ul>
7	<b>Prerequisites</b>	None

1	<b>Module name</b> 93116	<b>AI-1 Systems Project</b> AI-1 Systems project	<b>10 ECTS</b>
2	Courses / lectures	Projektseminar: AI-1 Systems Project (4 SWS) (WiSe 2025)	10 ECTS
3	Lehrende	Jan Frederik Schaefer Prof. Dr. Michael Kohlhase	

4	<b>Module coordinator</b>	Prof. Dr. Michael Kohlhase	
5	<b>Contents</b>	<p>This project complements the symbolic AI methods covered in the AI-1 Lecture with practical experience in implementing the algorithms or applying existing state-of-the-art libraries and systems. Practical areas of covered in this project include</p> <ul style="list-style-type: none"> <li>• Logic Programming</li> <li>• Rational Agents</li> <li>• Search (classical/adversarial)</li> <li>• Constraint Satisfaction/Propagation</li> <li>• Propositional/First-Order Reasoning</li> <li>• Knowledge Representation</li> <li>• Planning</li> </ul> <p>Project participants will work on multiple concrete problems/applications in small project teams. The results will be</p> <ul style="list-style-type: none"> <li>• evaluated using benchmark/problems and/or competitions between project teams.</li> <li>• documented in (short) project reports and be presented to the group.</li> </ul>	
6	<b>Learning objectives and skills</b>	<p>Students will</p> <ul style="list-style-type: none"> <li>• develop and implement algorithms or apply existing systems/libraries to multiple symbolic AI Problems,</li> <li>• acquire hands-on experience in an established research field,</li> <li>• learn best practices in software development and documentation,</li> <li>• gain first experience in academic writing.</li> </ul>	
7	<b>Prerequisites</b>	Strong programming skills in any programming language.	
8	<b>Integration in curriculum</b>	no Integration in curriculum available!	
9	<b>Module compatibility</b>	Studienrichtung Machine Learning / Artificial Intelligence Master of Science Data Science 20212	
10	<b>Method of examination</b>	<p>Praktikumsleistung</p> <p>The project consists of several large tasks (≈6). The first task is solved individually, the other tasks are solved in teams of 2 students. A presentation is given on one of the tasks (typically as a group presentation where each student gets a ≈10 minute segment that is individually graded). A written report (no restrictions on page number, 10–15 pages is typical) is submitted on one task. Three reviews for other students' reports have to be written. The reviewed students can use the reviews to improve their report. The review process is double-blind and students can choose not to get reviews for their report.</p> <p>*</p>	

11	<b>Grading procedure</b>	Praktikumsleistung (100%) The final grade is composed from the quality of the deliverables, namely the practical part (65% of the grade), the presentation (10% of the grade), the written report and reviews (25% of the grade).
12	<b>Module frequency</b>	Only in winter semester

2	Courses / lectures	Vorlesung mit Übung: AI in Medical Robotics (4 SWS) (WiSe 2025)	5 ECTS
3	Lehrende	Prof. Dr. Franziska Mathis-Ullrich Dr.-Ing. Christian-Peter Kunz	

4	<b>Module coordinator</b>	Prof. Dr. Franziska Mathis-Ullrich	
5	<b>Contents</b>	<p>This module is concerned with artificial intelligence technologies in medical robotics and with methods that establish different forms of intelligence in medical robotic systems. Participants will become familiar with the design and application of AI methods and algorithms for perception, motor control, planning, cognition and learning and with their application in biorobotic systems and robotic solutions for diagnosis and treatment. Application domains include minimally invasive surgery, motor rehabilitation, exoskeletons and assistive devices, as well as medical service robotics. The taught methods will be applied to application data during designated computer exercises that are integrated into the course.</p> <p>Topics include, but are not limited to:</p> <ul style="list-style-type: none"> <li>• Basic principles and classification of artificial intelligence</li> <li>• Overview of AI methods and technologies in medical imaging</li> <li>• Implications of surgical workflow planning using AI methods</li> <li>• Motion planning in robotic surgery, rehabilitation robots and medical service robots</li> <li>• Perception in robotic surgery, rehabilitation robots and assistive robots</li> <li>• Motion planning in robotic surgery, rehabilitation robots and assistive robots</li> <li>• Adaptation and Learning in Human-Robot Interaction</li> <li>• Design criteria and regulations for AI-based medical systems</li> </ul>	
6	<b>Learning objectives and skills</b>	<ul style="list-style-type: none"> <li>• Students are able to employ artificial intelligence technologies and methods for applications in medical robotics.</li> <li>• They are capable of understanding and handling the complexity of biorobotic AI systems and have command of a versatile set of methods for analyzing and further advancing such systems.</li> <li>• They are able to combine different tools and methods to achieve intelligent perception, planning, control, learning and cognition in robotic solutions for minimally invasive surgery, motor rehabilitation robotics, and medical service robotics.</li> </ul>	
7	<b>Prerequisites</b>	Participants should be familiar with fundamentals of linear algebra. It is advantageous but not required to have some prior knowledge on robotics, basic methodologies of AI, and basic probability theory.	
8	<b>Integration in curriculum</b>	no Integration in curriculum available!

3	Lehrende	Paul Martini Fabian Woller Prof. Dr. David Benjamin Blumenthal	

4	<b>Module coordinator</b>	Prof. Dr. David Benjamin Blumenthal	
5	<b>Contents</b>	<p>With the growing amount of readily available molecular profiling data, algorithms for analyzing these data are getting more and more important. This lecture provides a close-up view on a selection of these algorithms and introduces the biomedical problems which are addressed by them. In particular, the lecture will cover the following topics:</p> <ul style="list-style-type: none"> <li>• A very brief introduction to molecular biology.</li> <li>• Algorithms for global and local sequence alignment.</li> <li>• Algorithms for de novo sequence assembly.</li> <li>• Algorithms for secondary RNA structure prediction.</li> <li>• Algorithms for exploratory omics data analysis.</li> <li>• Algorithms for network alignment.</li> <li>• Algorithms for disease mechanism mining in biological networks.</li> </ul>	
6	<b>Learning objectives and skills</b>	<p>Students will</p> <ul style="list-style-type: none"> <li>• be able to explain the basics of molecular biology,</li> <li>• be able to explain fundamental algorithms used in the field,</li> <li>• be able to use paradigms of algorithm design such as dynamic programming, local search, and ant colony optimization in concrete application scenarios,</li> <li>• be able to reimplement the covered algorithms,</li> <li>• be able to provide detailed, technical explanations of the covered algorithms.</li> </ul>	
7	<b>Prerequisites</b>	<p>Since the lecture will be accompanied by programming exercises in Python, prior knowledge of this programming language is recommended. For students without prior experience, a very brief introduction to Python will be provided in the first two exercise sessions.</p>

4	<b>Module coordinator</b>	Prof. Dr. Stephanie Evert	
5	<b>Contents</b>	<p>Dieses Modul widmet sich vertieft den verschiedenen Methoden der Datenanalyse in den Digital Humanities und illustriert diese anhand ausgewählter Anwendungsfelder. Mögliche Gegenstände des Moduls sind dementsprechend Themen zur Analyse von Sprache und Texten, Bild- und Tondaten, digitalisierten Objekten und anderen Phänomenen der Digital Humanities.</p> <p>Methodisch werden sowohl statistische und quantitative Verfahren zur Datenanalyse, Mustererkennung und Bildverarbeitung vermittelt als auch qualitative und hermeneutische Methoden.</p> <p>Ein besonderer Schwerpunkt liegt auf der Kombination beider Aspekte im Sinne eines Mixed Methods-Ansatzes, sowie auf der hermeneutischen Interpretation der Ergebnisse maschineller Auswertungen. In Ergänzung zum Modul Pattern Recognition stehen hier die Gegenstände und Anwendungsthemen der Digital Humanities sowie besondere Umstände, die bei der Analyse solcher Daten berücksichtigt werden müssen (z.B. fragmentarische historische Daten), im Mittelpunkt.</p>	
6	<b>Learning objectives and skills</b>	Die Studierenden führen selbstständig verschiedene Formen der Datenanalyse durch, begründen ihre methodischen Entscheidungen überzeugend und interpretieren die Ergebnisse maschineller Auswertungen sinnvoll.	

		<p>Sie kennen die spezifischen Bedingungen bei der Analyse von geisteswissenschaftlichen Datensätzen und entwickeln daran angepasste Lösungen.</p> <p><b>Kompetenzen</b></p> <p><b>Die Studierenden</b></p> <ul style="list-style-type: none"> <li>• kennen die spezifischen Bedingungen bei der Analyse von geisteswissenschaftlichen Datensätzen und entwickeln daran angepasste Lösungen.</li> <li>• erarbeiten unter impulsgebender Anleitung einzeln oder in kleinen Teams Teilbereiche. Die Themen werden auf gehobenem Niveau wissenschaftlich behandelt und mit gefestigter Methodenkompetenz diskursiv dargestellt, so dass sich am Ende ein Gesamtbild ergibt.</li> <li>• entwickeln Fähigkeiten zum Einsatz von ideen-, mentalitäts-, sozial- und geschlechtergeschichtlichen Ansätze bei der Erschließung von geisteswissenschaftlichen Kontexten</li> <li>• finden eigenständig einschlägige Forschungsliteratur zu vorgegebenen interdisziplinären Themenbereichen und erarbeiten sich deren Inhalte,</li> <li>• erstellen Präsentationen (Medienkompetenz),</li> <li>• steigern ihre Kommunikationskompetenzen durch grundlegende Argumentationsführung und diskursive Positionsfindung durch den Vortrag und die Verteidigung eigener Standpunkte im Plenum</li> <li>• sowie durch kritische und konstruktive Diskussion der Beiträge der anderen Seminarteilnehmer/innen,</li> <li>• steigern ihre Präsentationskompetenzen durch fachterminologisch korrekte und sprachlich differenzierte Präsentation von selbstverfassten wissenschaftlichen Texten in Wort und Schrift, steigern das Niveau ihrer wissenschaftlichen Arbeit in Wort und Schrift.</li> </ul> <p><b>Selbstkompetenz</b></p> <p><b>Die Studierenden</b></p> <ul style="list-style-type: none"> <li>• überwachen eigenständig ihren Arbeitsfortschritt und die Einhaltung vorgegebener Termine,</li> <li>• festigen grundlegende Kompetenzen des Selbstmanagements und reflektieren den eigenen Lernprozess.</li> </ul> <p><b>Sozialkompetenz</b></p> <p><b>Die Studierenden</b></p> <ul style="list-style-type: none"> <li>• tragen durch Feedback und Ergebnisdiskussion zum kooperativen und konstruktiven Arbeiten in der Gruppe bei,</li> <li>• verbessern die Diskussionskultur, indem sie auf hohem Niveau Inhalte und methodische Zugänge argumentativ vertreten.</li> </ul>

4	<b>Module coordinator</b>	Luca Abel Prof. Dr. Björn Eskofier Veronika Ringgold Prof. Dr. Nicolas Rohleder
5	<b>Contents</b>	<p>The interdisciplinary module „Applied Data Science in Medicine &amp; Psychology“ covers basic statistical knowledge and hands-on Python exercises. We will start with relevant knowledge from both disciplines (statistics and programming), which will allow you to analyze your data more efficiently. Since this is a course for students from many different disciplines (life sciences, psychology, medical engineering, etc.) we will gradually build up your knowledge which will allow you to cover more complex ideas as we move through the course.</p> <p>Our goal is to provide you with the necessary knowledge, skills, and tools for future projects, such as theses, and to prepare those of you who wish to pursue a career in science. This course will also complement the seminars „Digital Health Psychology“ and „Digitalization in Clinical Psychology“, as prior knowledge of Python and data analysis will enhance the benefit of both seminars for you.</p>
6	<b>Learning objectives and skills</b>	<p>Students:</p> <ul style="list-style-type: none"> <li>• Develop a programming mindset</li> <li>• Gain an understanding of research data management</li> <li>• Acquire basic python coding skills</li> <li>• Gain a basic understanding of inference statistic</li> <li>• Can load, manipulate, analyze, and visualize data</li> <li>• Understand basics of machine learning</li> </ul>
7	<b>Prerequisites</b>	None
8	<b>Integration in curriculum</b>	semester: 5
9	<b>Module compatibility</b>	Medical Data Science Master of Science Data Science 20212
10	<b>Method of examination</b>	Variabel Written e-Exam (60 min) *

3	Lehrende	Pierre-Louis Sixdenier Jose Juan Hernandez Morales Prof. Dr.-Ing. Jürgen Teich	

4	<b>Module coordinator</b>	Joachim Falk Prof. Dr.-Ing. Jürgen Teich	
5	<b>Contents</b>	<p>Approximate Computing denotes a quite young research area that exploits the fact and capability of many applications and systems to tolerate imprecision and/or inexactness of computed results. Prominent areas of applications and novel techniques of computing approximate rather than exact results have brought up new implementations either at hardware and/or software levels for important emergent workloads such as searching, mining, image processing, and data retrieval.</p> <p>Although hardware technology is improving at a fast pace, energy and power are becoming more and more important constraints apart from exactly computing results in an acceptable amount of time. The main goals of approximate computing techniques are therefore to exploit the possible trade-off between power/energy consumption, accuracy, performance, and/or cost, e.g., utilized hardware resources.</p> <p>The purpose of the course approximate computing is to instruct students about the main ideas and concepts of approximate computing. This includes analyzing the trade-off between energy consumption, accuracy, run-time and hardware costs, concrete approximating techniques (e.g. approximate hardware synthesis, approximating algorithms) as well as theoretical background (determining the computational error and its complexity).</p>	
6	<b>Learning objectives and skills</b>	<p>Fachkompetenz - Wissen</p> <ul style="list-style-type: none"> <li>The students know the principles and benefits of Approximate Computing and when it is applicable.</li> <li>The students know multiple error metrics and their semantic meaning.</li> </ul> <p>Fachkompetenz - Verstehen</p> <ul style="list-style-type: none"> <li>The students understand the difference between the error metrics.</li> <li>The students understand the principle of function falsification.</li> <li>The students can apply the presented approximation techniques.</li> </ul> <p>Fachkompetenz - Anwenden</p> <ul style="list-style-type: none"> <li>The students are capable of choosing the appropriate approximation technique based on given requirements.</li> </ul>

1	<b>Module name</b> 22991	<b>Klinische Datenwissenschaften</b> Clinical data science	<b>5 ECTS</b>
2	Courses / lectures	Vorlesung mit Übung: Klinische Datenwissenschaften (4 SWS)	5 ECTS
3	Lehrende	PD Dr. Dennis Toddenroth Prof. Dr. med. Thomas Ganslandt	

4	<b>Module coordinator</b>	PD Dr. Dennis Toddenroth	
5	<b>Contents</b>	<p>Der zunehmende Umfang elektronisch vorliegender klinischer Daten erweitert die Möglichkeiten, diese auch zur automatisierten Analyse bisher unentdeckter medizinischer Zusammenhänge und zur Erzeugung neuen medizinischen Wissens zu verwenden. Derartige Datenauswertungen hängen oft nicht von einzelnen Fragestellungen oder Hypothesen ab, insofern unterscheiden sich die angewendeten Methoden auch von entsprechend etablierten statistischen Verfahren. Die wissenschaftliche Nutzung von Patientendaten aus dem Behandlungsalltag bringt allerdings auch neue Herausforderungen mit sich, wie beispielsweise eine gezielte Berücksichtigung unterschiedlicher Datenstrukturen und vielfältiger klinischer Formulare.</p> <p>Diese Veranstaltung thematisiert die Anwendung automatisierter Auswertungsmethoden auf Patientendaten. Nach einem vergleichenden Überblick über das übliche Vorgehen zur Generierung medizinischen Wissens (biometrische Grundlagen u. Studientypen) werden Grundprinzipien und Gemeinsamkeiten unterschiedlicher Verfahren zur automatisierten Datenanalyse behandelt; anschließend werden einzelne Methoden und Anwendungsbeispiele vertieft, und Ansätze zur statistischen Bewertung erläutert. Innerhalb der Veranstaltung wird eine praktische Einführung in die Programmiersprache R vermittelt (<a href="http://www.r-project.org/">http://www.r-project.org/</a>). Die Teilnehmer sollen sich dabei in praktischen Übungen auch selbständig in einzelne Analyseverfahren einarbeiten, um diese dann auf klinische Beispieldatensätze praktisch anzuwenden und die so erzeugten Beobachtungen kritisch zu interpretieren.</p>	
6	<b>Learning objectives and skills</b>	<p>Studierende, die das Modul erfolgreich abgeschlossen haben:</p> <ul style="list-style-type: none"> <li>• erläutern Grundprinzipien und Einteilung von Machine-Learning-Verfahren.</li> <li>• verstehen Einteilung und Merkmale diverser relevanter klinischer Daten.</li> <li>• verstehen Charakteristika der Programmiersprache R und wenden diese an.</li> <li>• implementieren R-Skripte zur Anwendung von Machine-Learning-Verfahren auf Patientendaten.</li> <li>• überprüfen Resultate automatisierter Analysen vielfältiger klinischer Daten.</li> </ul>	
7	<b>Prerequisites</b>	MSc-Studium in Informatik, Einführung in die Medizinische Informatik.	
8	<b>Integration in curriculum</b>	semester: 1

3	Lehrende		

4	<b>Module coordinator</b>	Prof. Dr. Johannes Helbig	
5	<b>Contents</b>	<p>Die Digitalisierung verändert unsere Welt, disruptiv, umfassend und unumkehrbar: Sie ändert die strukturellen Voraussetzungen für unsere Wirtschaft, unsere Gesellschaft und unser Verständnis von uns selbst. Digitale Souveränität adressiert die Frage, wie wir diesem Umbruch Gestaltung und Führung geben können, nach eigenem Willen und eigenen Wertvorstellungen. Das betrifft insbesondere die Freiheitlichkeit, die soziale Gerechtigkeit und die wirtschaftliche Leistungsfähigkeit der Gesellschafts- und Wirtschaftsordnungen der Zukunft.</p> <p>Viele Disziplinen müssen dazu beitragen, keine kann diese Aufgabe innerhalb des eigenen Horizonts lösen. Die Veranstaltung ist entsprechend in hohem Maße multidisziplinär. Sie richtet sich an fortgeschrittene Studierende aus mathematisch-naturwissenschaftlichen und technischen Studiengängen, aus Wirtschafts-, Sozial- und Rechtswissenschaften sowie aus Philosophie und Ethik. Die Veranstaltung ist als Ringvorlesung mit internen und externen Gästen konzipiert. Auf einen Kolloquiumsvortrag folgt jeweils ein diskursiver Abschnitt in Breakout-Gruppen. Themenschwerpunkte umfassen:</p> <ul style="list-style-type: none"> <li>• Zukunft der Wertschöpfung und Wettbewerbsfähigkeit</li> <li>• Innere und äußere Sicherheit</li> <li>• Meinungsbildung und öffentlicher Raum</li> <li>• Konstruktive Anpassung des Rechtssystems</li> <li>• Zukunft der Arbeit und partizipative Nutzenverteilung</li> <li>• Strukturvoraussetzungen demokratischer politischer Prozesse und Systeme</li> <li>• Leistungsfähige Bildung</li> <li>• Trustworthy Artificial Intelligence</li> <li>• Souveräne digitale Infrastrukturen</li> <li>• Neue Narrative für die Basis gesellschaftlicher Solidarität</li> <li>• Menschenbild, Weltbild und ethische Reflektion</li> </ul> <p>Die Veranstaltung wird ergänzt durch vertiefende Seminare zu ausgewählten Einzelthemen; diese können auch jeweils eigenständig belegt werden.</p>	
6	<b>Learning objectives and skills</b>	<p>Die Studierenden</p> <ul style="list-style-type: none"> <li>• kennen die disruptiven Auswirkungen der Digitalisierung in unterschiedlichen Domänen</li> <li>• verstehen zugrundeliegende Veränderungen der strukturellen Voraussetzungen und ihre Wirkzusammenhänge und erkennen wiederkehrende Muster</li> <li>• können Handlungsfelder einschätzen und exemplarisch Maßnahmenansätze entwickeln und beurteilen</li> </ul>	

		<ul style="list-style-type: none"> <li>• kennen Denkansätze, Begriffsbildungen und Paradigmen benachbarter Disziplinen und können sie im Dialog miteinander in Beziehung setzen</li> <li>• können eigenständig und im Team ein Teilthema eigenständig und vertiefend erschließen und Gestaltungsansätze entwickeln</li> </ul>
7	<b>Prerequisites</b>	None

1	<b>Module name</b> 43932	<b>Computational Imaging Project</b> Computational imaging project	<b>10 ECTS</b>
2	Courses / lectures	Projekt: Computational Imaging Project (8 SWS)	10 ECTS
3	Lehrende		

4	<b>Module coordinator</b>	Prof. Dr. Florian Knoll	
5	<b>Contents</b>	Individual or group projects in the area of computational methods in biomedical imaging. The projects range from theoretical analysis to practical implementations of approaches that have recently been published in the literature. Students can either propose their own topics or contact the lecturer for a list of available topics. The project can be done either as 10 ECTS or a 5 ECTS depending on the scope of the work and the study program. If you want to do a project in this semester, please write an email to Prof. Knoll at the beginning of the semester to discuss possible topics.	
6	<b>Learning objectives and skills</b>	Students acquire and practice the skills to: <ul style="list-style-type: none"> <li>• Read and discuss literature from the field of biomedical imaging</li> <li>• Implement approaches that are proposed in the literature</li> <li>• Run computational experiments and interpret and communicate their findings in lab meetings</li> </ul>	
7	<b>Prerequisites</b>	Recommended: Computational Magnetic Resonance Imaging Lecture and Medical Engineering II	
8	<b>Integration in curriculum</b>	semester: 1	
9	<b>Module compatibility</b>	Artificial intelligence in biomedical engineering (AIBE) Master of Science Data Science 20212	
10	<b>Method of examination</b>	Praktikumsleistung The grade is determined by: 50% Software development of approaches from the literature. 25% Presentation of the software and the results in the lab group meeting. 25% Written documentation of the development in form of a project report (max 10 pages). *	
11	<b>Grading procedure</b>	Praktikumsleistung (100%)	
12	<b>Module frequency</b>	Only in summer semester	
13	<b>Workload in clock hours</b>	Contact hours: 60 h Independent study: 240 h	
14	<b>Module duration</b>	1 semester	
15	<b>Teaching and examination language</b>	german english	
16	<b>Bibliography</b>	An individual reading list will be established at the beginning of each project.

4	<b>Module coordinator</b>	Prof. Dr. Michael Döllinger	
5	<b>Contents</b>	<p>The lecture communicates the application of computer controlled experimental and numerical methods in the area of physiological and pathological speech communication and speech production. It is communicated how learned theory and learned methods can be applied in medical and clinical oriented research. The main focus is on the process of voice production with its complex physical fluid-structure-acoustic interactions (FSAI). The challenge in clinical routine is the limited accessibility of the larynx where the sound is actually produced. This limited access makes it very difficult to place sensors and measurement tools directly in the living human.</p> <p>Hence, the lecture (1) briefly communicates relevant physiology and anatomy being requisite to actually understand the problem. (2) Experimental and numerical model strategies, visual and laser based techniques for visualization and (3) experimental / numerical methods for analysis of the fluid-structure-acoustic interaction are communicated. This includes:</p> <ol style="list-style-type: none"> <li>1) Imaging by High-speed-video endoscopy (&gt;4000 fps)</li> <li>2) Image processing and image analysis: classical approaches and machine learning based</li> <li>3) 3D laser based high-speed visualization</li> <li>4) Development of clinical diagnostic approaches for quantitative judgement of disorders</li> <li>5) Numerical modelling of laryngeal dynamics by lumped-mass and 3D-FVM models</li> <li>6) Numerical simulation of laryngeal airflow and interaction with the vocal folds</li> <li>7) Numerical simulation of generated acoustics</li> <li>8) Experimental model of laryngeal processes using synthetic and ex-vivo cadaver models</li> <li>9) Parameter optimization of numerical models towards real laryngeal dynamics</li> <li>10) How to analyse generated data</li> </ol>	
6	<b>Learning objectives and skills</b>	The systematic process chain including generation, simulations, analysis and interpretation of multi-modal based data (clinical/ experimental/numerical) within basic and clinical research will be communicated.

5	<b>Contents</b>	<p>Die Vorlesung baut auf die in den Grundlagen der Rechnerarchitektur und -organisation vermittelten Inhalte auf und setzt diese mit weiterführenden Themen fort. Es werden zunächst grundlegende fortgeschrittene Techniken bei Pipelineverarbeitung und Cachezugriffen in modernen Prozessoren und Parallelrechnern behandelt. Ferner wird die Architektur von Spezialprozessoren, z.B. DSPs und Embedded Prozessoren behandelt. Es wird aufgezeigt, wie diese Techniken in konkreten Architekturen (Intel Nehalem, GPGPU, Cell BE, TMS320 DSP, Embedded Prozessor ZPU) verwendet werden. Zur Vorlesung wird eine Tafelübung angeboten. Mit erfolgreicher mündlicher Prüfung können 5 ECTS erworben werden. In den Tafelübungen werden die in der Vorlesung vermittelten Techniken durch zu lösende Aufgaben vertieft. In der Rechnerübung soll u.a. ein einfacher Vielkern-Prozessor auf Basis des ZPU-Prozessors mit Simulationswerkzeugen aufgebaut werden. Im Einzelnen werden folgende Themen behandelt:</p> <ul style="list-style-type: none"> <li>• Organisationsaspekte von CISC und RISC-Prozessoren</li> <li>• Behandlung von Hazards in Pipelines</li> <li>• Fortgeschrittene Techniken der dynamischen Sprungvorhersage</li> <li>• Fortgeschritten Cachetechniken, Cache-Kohärenz</li> <li>• Ausnutzen von Cacheeffekten</li> <li>• Architekturen von Digitalen Signalprozessoren</li> <li>• Architekturen homogener und heterogener Multikern-Prozessoren (Intel Corei7, Nvidia GPUs, RISC-V)</li> <li>• Architektur von Parallelrechnern (Clusterrechner, Superrechner)</li> <li>• Effiziente Hardware-nahe Programmierung von Multikern-Prozessoren (OpenMP, SSE, CUDA)</li> <li>• Leistungsmodellierung und -analyse von Multikern-Prozessoren (Roofline-Modell)</li> </ul>
6	<b>Learning objectives and skills</b>	<p>Fachkompetenz Wissen Lernende können Wissen abrufen und wiedergeben. Sie kennen konkrete Einzelheiten wie Begriffe, Definitionen, Fakten, und Abläufe in einem Prozessor darlegen. Verstehen</p>

		<p>Lernende können Beispiele für Rechnerarchitekturen anführen, sie sind in der Lage, Schaubilder von Prozessoren zu interpretieren und die Abläufe in eigenen Worten zu beschreiben.</p> <p>Anwenden Lernende können beim Erstellen eigener Programme durch Transfer des Wissens über Interna von Prozessorarchitekturen Optimierungen hinsichtlich des Laufzeitverhaltens vornehmen.</p> <p>Analysieren Lernende können zwischen verschiedenen Varianten von Lösungen einer Prozessorarchitektur klassifizieren, die Gründe für durchgeführte Entwurfsentscheidungen erschließen, Unterscheide gegenüberstellen und gegeneinander bewerten.</p> <p>Lern- bzw. Methodenkompetenz Lernende erwerben die Fähigkeit selbstständig Testprogramme zum Bewerten der Leistungsfähigkeit eines Prozessors zu erstellen.</p>

4	<b>Module coordinator</b>	Prof. Dr.-Ing. Dietmar Fey Dr.-Ing. Marc Reichenbach
5	<b>Contents</b>	<p>Maschinelles Lernen, im speziellen Deep-Learning Netzwerke haben in den letzten Jahren stark an Bedeutung gewonnen. Anwendungsfelder umfassen beispielsweise für die Klassifikation von Bildern, das Verstehen von menschlicher Sprache oder die Überwachung von Rechentechnik bzgl. IT-Angriffen. Während die Grundlagen von Deep-Learning (Neuronale Netze) schon über einen langen Zeitraum erforscht wurden, ist eine flächendeckende Anwendung von Deep-Learning Netzwerken erst seit jüngster Zeit möglich, da nun entsprechende leistungsfähige Rechnerarchitekturen zur Verfügung stehen um die aufwendigen Berechnungen durchzuführen.</p> <p>Das genannte Praktikum beschäftigt sich mit der Evaluierung verschiedener Rechnerarchitekturen (mit entsprechenden Architektureigenschaften) bzgl. der performanten Auswertung von Deep-Learning Netzwerken. Dabei werden die Architekturen CPU, GPU und FPGA genauer untersucht und bewertet. Für eine schnelle Auswertung von Deep-Learning Netzwerken spielt Parallelrechentechnik eine wichtige Rolle, deswegen werden unter anderem folgende Fragen im Praktikum genauer beantwortet:</p> <ul style="list-style-type: none"> <li>• Wie kann ich Multi-Core CPUs effizient nutzen?</li> <li>• Kann ich mit der Verwendung der SIMD-Extensions (SSE, AVX) eine Beschleunigung der Auswertegeschwindigkeit erzielen?</li> <li>• Was sind GPUs und wie kann ich die massive Parallelität für die Auswertung von Deep-Learning Netzwerken nutzen?</li> <li>• Welche Rolle spielen Caches bzw. die Speicherhierarchie eines Rechensystems für die schnelle Auswertung von Deep-Learning Netzwerken?</li> <li>• Wie können FPGAs genutzt werden um Deep-Learning Netzwerke applikationsspezifisch zu implementieren?</li> </ul> <p>Für einen einfachen Einstieg wird das Deep-Learning Framework Tensorflow verwendet. Anhand einfacher Beispiele können o.g. Fragen beantwortet werden. Ein größeres Beispiel, gerechnet auf unseren eigenen Servern mit Hardware von AMD, Intel und Nvidia zeigt wie sich reale Anwendungen effizient mit "Customer-Hardware" umsetzen lassen. Hardware in verschiedenen Leistungsklassen (von wenigen Milliwatt bis mehrere Kilowatt) steht dabei zur Verfügung. Die Experimente werden in unserem Parallelrechenlabor durchgeführt.</p>

		Die Studierenden erhalten eine Einführung in Form von Vorträgen. Hauptbestandteil ist die praktische Arbeit mit genannten Rechnerarchitekturen durch effiziente Programmierung mittels C(++), Cuda, OpenCL. Für den erfolgreichen Abschluss des Praktikums ist Kolloquium (ca. 15 Minuten) zu bestehen und ein Bericht (ca. 10 Seiten) anzufertigen.
6	<b>Learning objectives and skills</b>	<p>Verstehen Die Studierenden verstehen die elementaren Grundfunktion neuronaler Netze und wie sich diese auf Hardware abbilden lassen. Die Studierenden lernen die Architekturen CPU, GPU und FPGA kennen, verstehen den internen Aufbau und können die wesentlichen Architektureigenschaften wiedergeben.</p> <p>Analysieren Die Studierenden nutzen CPUs, GPUs und FPGAs für die Auswertung von DL-Netzwerken. Dabei können sie Performancemetriken (Laufzeit, Energieverbrauch) anwenden.</p> <p>Evaluieren Die Studierenden können die Architekturen CPU, GPU und FPGA hinsichtlich ihrer Eignung für die Auswertung von DL-Netzwerken vergleichen.</p>
7	<b>Prerequisites</b>	<ul style="list-style-type: none"> <li>• Grundlegende Programmierkenntnisse in C</li> <li>• Freude an der Hardware</li> <li>• Detaillierte Kenntnisse in FPGAs, VHDL oder Assembler sind nicht erforderlich</li> <li>• Wissen im Bereich Deep-Learning / Tensorflow ist nicht erforderlich</li> </ul>

2	Courses / lectures	Übung: Computer Vision Exercise (4 SWS) Vorlesung: Computer Vision (2 SWS)	2,5 ECTS 2,5 ECTS
3	Lehrende	Dr.-Ing. Vanessa Klein Muhammad Sohail Prof. Dr. Tim Weyrich Prof. Dr. Bernhard Egger	

4	<b>Module coordinator</b>	Prof. Dr. Tim Weyrich
5	<b>Contents</b>	This lecture discusses important algorithms from the field of computer vision. The emphasis lies on 3-D vision algorithms, covering the geometric foundations of computer vision, and central algorithms such as stereo vision, structure from motion, optical flow, and 3-D multiview reconstruction. Participants of this advanced course are expected to bring experience from prior lectures either from the field of pattern recognition or from the field of computer graphics.
6	<b>Learning objectives and skills</b>	<p>Die Vorlesung stellt eine Auswahl von Methoden aus dem Gebiet der Computer Vision vor, die in dem Feld eine zentrale Stellung einnehmen. In den Übungen implementieren und evaluieren die Studierenden selbständig diese Methoden. Die Studierenden arbeiten die ganze Zeit über an populären Computer Vision-Methoden wie zum Beispiel Stereosehen, optischer Fluss und 3D-Rekonstruktion aus mehreren Ansichten. Für diese Probleme</p> <ul style="list-style-type: none"> <li>• beschreiben die Studierenden perspektivische Projektion, Rotationen und verwandte geometrische Grundlagen,</li> <li>• erklären die Studierenden die behandelten Methoden,</li> <li>• diskutieren die Studierenden Vor- und Nachteile verschiedener Modalitäten zur Erfassung von 3D-Informationen,</li> <li>• implementieren die Studierenden einzeln und gemeinschaftlich in Kleingruppen Code,</li> <li>• entdecken die Studierenden optimale Vorgehensweisen in der Datenaufnahme,</li> <li>• erkunden und bewerten die Studierenden unterschiedliche Möglichkeiten für die Evaluation,</li> <li>• diskutieren und präsentieren die Gruppenarbeiter in Gruppen die Vor- und Nachteile ihrer Implementierungen,</li> <li>• diskutieren und reflektieren die Studierenden gesellschaftliche Auswirkungen von Anwendungen des 3D-Rechnersehens.</li> </ul> <p>The lecture introduces computer vision algorithms that are central to the field. In the exercises, participants autonomously implement and evaluate these algorithms. The participants work throughout the time on popular computer vision algorithms, like for example stereo vision, optical flow, and 3-D multiview reconstruction. For these problems, the participants</p> <ul style="list-style-type: none"> <li>• describe perspective projection, rotations, and related geometric foundations,</li> <li>• explain the presented methods,</li> </ul>

		<ul style="list-style-type: none"> <li>• discuss the advantages and disadvantages of different modalities for acquiring 3-D information,</li> <li>• implement individually and in small groups code,</li> <li>• discover best practices in data acquisition,</li> <li>• explore and rank different choices for evaluation,</li> <li>• discuss and present in groups the advantages and disadvantages of their implementations,</li> <li>• discuss and reflect the social impact of applications of computer vision algorithms.</li> </ul>

1	<b>Module name</b> 65876	<b>Data-driven methods for dynamical systems</b>	<b>5 ECTS</b>
2	Courses / lectures	Vorlesung: Data-driven methods for dynamical systems (2 SWS) (SoSe 2026) Übung: Exercise Data-driven methods for dynamical systems (1 SWS) (SoSe 2026)	5 ECTS -
3	Lehrende	Prof. Dr. Giovanni Fantuzzi	

4	<b>Module coordinator</b>	Prof. Dr. Giovanni Fantuzzi	
5	<b>Contents</b>	<p>This course introduces students to modern data science techniques for interpreting, analyzing, forecasting, and controlling dynamic data. Classical problems from the theory of dynamical systems will be re-examined using state-of-the-art computational methods based on data. Course topics will include:</p> <ul style="list-style-type: none"> <li>• Dynamic mode decomposition</li> <li>• The Koopman operator</li> <li>• Kernel methods for dynamics</li> <li>• System identification and forecasting</li> </ul> <p>Theory will be complemented by programming assignments, where students will have the chance to implement the theory and reproduce results presented in the lectures.</p>	
6	<b>Learning objectives and skills</b>	<p>By the end of the course, students should be able to: # Explain and apply dynamic mode decomposition and its extensions</p> <ul style="list-style-type: none"> <li>• Explain and apply the basic notions of Koopman operator theory</li> <li>• Explain and utilize system identification techniques</li> <li>• Implement data-driven methods for dynamical system in a programming language of choice</li> </ul>	
7	<b>Prerequisites</b>	<p>This course requires:</p> <ul style="list-style-type: none"> <li>• A basic understanding of differential equations / maps</li> <li>• The ability to program in at least one scientific programming language (e.g. MATLAB, Python, Julia, etc.)</li> </ul>	
8	<b>Integration in curriculum</b>	semester: 3	
9	<b>Module compatibility</b>	Studienrichtung Mathematische Theorie / Grundlagen der Data Science Master of Science Data Science 20212	
10	<b>Method of examination</b>	mündlich (30 Minuten)

14	<b>Module duration</b>	1 semester	

15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	Lecture materials will be provided as the course progresses. A reading list will also be provided at the start of the course.

1	<b>Module name</b> 65794	<b>Data Governance Applications</b>	<b>2,5 ECTS</b>
2	Courses / lectures	Seminar: Data Governance Applications (2 SWS) Participation in all seminar sessions is mandatory.	2,5 ECTS
3	Lehrende	Anna Leschanowsky	

4	<b>Module coordinator</b>	Prof. Dr. Daniel Tenbrinck
5	<b>Contents</b>	<p>This seminar builds upon the foundational concepts introduced in the Data Governance Foundations seminar, which covers the management of legal requirements, ethical considerations, and implementation of data governance. The Data Governance Applications seminar extends these foundations by focusing on the practical application of data governance for AI systems. It emphasizes the implementation of frameworks that ensure data security, privacy, and compliance with legal and ethical standards. Students will explore key topics such as data quality and data classification, privacy-enhancing technologies for data security, and methods for analyzing data bias, specifically in the context of speech, image, and natural language processing. A strong emphasis will be placed on practical, hands-on activities, including creating data cards for databases, using Python and Jupyter Notebooks to assess data quality, engaging in data cleaning, implementing privacy-enhancing techniques, and analyzing bias in voice data and its applications. The seminar will culminate in a group project where students will design and implement a comprehensive data governance framework for a chosen AI application.</p>
6	<b>Learning objectives and skills</b>	<p>Students</p> <ul style="list-style-type: none"> <li>• understand the principles of data governance, including legal and ethical requirements and how to translate these into technical measures.</li> <li>• gain practical skills in applying data governance measures, such as creating data cards, to ensure transparency and compliance.</li> <li>• learn to assess and improve data quality by applying techniques for data cleaning, re-annotation, and data visualization.</li> <li>• master anonymization methods and privacy-enhancing technologies (PETs) to protect sensitive data.</li> <li>• understand the ethical challenges of data bias and develop the ability to analyze and mitigate biases.</li> <li>• apply and implement governance strategies to real-world case studies while ensuring compliance with legal standards.</li> <li>• develop skills in presentation, and collaborative group work.</li> </ul>
7	<b>Prerequisites</b>	<p>The following can be beneficial to enhance the learning experience:</p> <ul style="list-style-type: none"> <li>• completion of the Data Governance Foundations course (or equivalent background in data governance)</li> <li>• basic programming skills in Python</li> <li>• experience working with Jupyter or Colab notebooks</li> <li>• familiarity with data visualization techniques</li> </ul>

		<ul style="list-style-type: none"> <li>• general understanding of data concepts and terminology</li> </ul>
8	<b>Integration in curriculum</b>	semester: 1

1	<b>Module name</b> 65793	<b>Data Governance Foundations</b>	<b>2,5 ECTS</b>
2	Courses / lectures	Seminar: Data Governance Foundation (WiSe 2025)	-
3	Lehrende	Anna Leschanowsky Prof. Dr. Daniel Tenbrinck	

4	<b>Module coordinator</b>	Prof. Dr. Daniel Tenbrinck
5	<b>Contents</b>	<p>This seminar introduces the foundations of Data Governance, focusing on the management of legal requirements, ethical considerations, metadata management and implementation of data governance. Starting from ethical and legal foundations, we explore their practical implementation using current AI topics such as training large language models and handling voice recordings. Students engage in interactive tasks including analyzing real-world governance failures and successes, making design choices based on different international laws, and role-playing ethical dilemmas. Additional hands-on activities involve meta data management exercises, culminating in a group project to create a data governance plan for a hypothetical organization. These practical experiences are designed to equip students with the knowledge and tools to implement effective data governance strategies in real-world settings.</p>
6	<b>Learning objectives and skills</b>	<p>Students</p> <ul style="list-style-type: none"> <li>• understand the fundamentals of data governance, including legal and ethical requirements, and their application in managing organizational data.</li> <li>• implement practical data governance strategies in AI contexts, such as training large language models and handling voice recordings.</li> <li>• analyze and manage metadata effectively, ensuring compliance and data quality through hands-on exercises.</li> <li>• evaluate real-world case studies, identifying best practices and common pitfalls in data governance.</li> <li>• design comprehensive data governance plans for hypothetical organizations, integrating legal, ethical, and technical aspects.</li> <li>• engage in ethical decision-making, using role-playing exercises to navigate complex dilemmas in data governance.</li> <li>• learn how to compile a written essay, scientific writing, correct citations.</li> <li>• learn how to create an appealing visual presentation in a group, review and successively optimize it.</li> <li>• learn how to present the topic in front of other students, how to train presentation skills.</li> </ul>
7	<b>Prerequisites</b>	<p>Prerequisites: No specific knowledge is mandatory for participation in the course. However, the following can be beneficial to enhance the learning experience:</p> <ul style="list-style-type: none"> <li>• Basic understanding of data concepts and terminology</li> </ul>

		<ul style="list-style-type: none"> <li>• Prior experience or knowledge in data management, processing, machine learning, statistical analysis or related fields</li> <li>• Interest in data governance and ethical data practices.</li> </ul>

5	<b>Contents</b>	Theoretical and practical fundamentals of solving difficult mixed-integer linear optimization problems (MIPs) constitute the main focus of this lecture. At first, the concept of NP-completeness and a selection of common NP-complete problems will be presented. As for polyhedral theory, fundamentals concerning the structure of faces of convex polyhedra will be covered. Building upon these fundamentals, cutting plane algorithms as well as branch-and-cut algorithms for solving MIPs will be taught. Finally, some typical problems of discrete optimization, e.g., the knapsack problem, the traveling salesman problem or the set packing problem will be discussed.	
6	<b>Learning objectives and skills</b>	Students <ul style="list-style-type: none"> <li>• will gain basic theoretical knowledge of solving mixed-integer linear optimization problems (MIPs),</li> <li>• are able to solve MIPs with the help of state-of-the-art optimization software.</li> </ul>	
7	<b>Prerequisites</b>	Recommended: Linear and Combinatorial Optimization

3	Lehrende	Prof. Dr. Timm Oertel	

4	<b>Module coordinator</b>	Prof. Dr. Timm Oertel
5	<b>Contents</b>	In this lecture, we cover theoretical aspects of discrete optimization. Taking a geometric approach, a focus will be on lattice theory, studying the interplay of lattices and convex bodies. Topics will include: Reduced bases, like the LLL-reduced basis, Minkowski's Theorem on successive minima, The closest lattice vector problem, Lenstra's Algorithm for linear integer optimization in fixed dimension, Barvinok's Algorithm for counting integer points in polytopes.
6	<b>Learning objectives and skills</b>	Students will learn basic concepts and tools in discrete optimization and discrete geometry, and they will learn how to apply these, for example, in discrete optimization.
7	<b>Prerequisites</b>	Recommended: Linear and Combinatorial Optimization, and Discrete Optimization I
8	<b>Integration in curriculum</b>	no Integration in curriculum available!

1	<b>Module name</b> 681735	<b>Datenbanken in Rechnernetzen und Transaktionssysteme</b> Distributed databases and transaction systems	<b>5 ECTS</b>
2	Courses / lectures	Vorlesung: Datenbanken in Rechnernetzen (2 SWS) (WiSe 2025) Vorlesung: Transaktionssysteme / Transaction Systems (2 SWS) (WiSe 2025)	- -
3	Lehrende	Prof. Dr.-Ing. Richard Lenz	

4	<b>Module coordinator</b>	Prof. Dr.-Ing. Richard Lenz	
5	<b>Contents</b>	<p><b>DBRN:</b> Rechnernetze entsprechen dem momentanen Stand der Technik; isolierte Rechnersysteme nehmen an Zahl und Bedeutung ab. Das Betreiben von Datenbanksystemen in Rechnernetzen erfordert neuartige Konzepte, die über die einer zentralisierten Datenbankverwaltung hinausgehen. In der Vorlesung werden Ansätze zur Datenbankverwaltung in verteilten Systemen vorgestellt. Verteilte Datenbanken, Parallele Datenbanken, DB-Sharing und heterogene Datenbanksysteme werden untersucht. Darüber hinaus widmet sich ein weiteres Hauptkapitel der Vorlesung der Verwendung und dem Betrieb von Datenbanksystemen im Internet.</p> <p><b>TAS:</b> Transactions are the core mechanism to guarantee database consistency in the presence of failures. The lecture introduces the cornerstones of the Transaction Concept and related techniques and system architectures. Topics are:</p> <ul style="list-style-type: none"> <li>• Reconstructing the Transaction Model</li> <li>• Advanced Transaction Models</li> <li>• Queued transaction processing</li> <li>• Implementing the ACID properties of transactions: Concurrency control, logging and recovery</li> <li>• TP Monitors: TRPC, Architecture of TP Monitor, Transaction Manager</li> </ul> <p>This course generalizes the transaction concept from its traditional database system domain to the broader context of client-server computing. The course begins by defining basic terminology and concepts. The role of a transaction processing system in application design, implementation, and operation is covered. Subsequent lectures cover the theory and practice of implementing locking, logging, and the more generic topic of implementing transactional resource managers.</p>	
6	<b>Learning objectives and skills</b>	<p><b>DBRN:</b> Die Studierenden</p> <ul style="list-style-type: none"> <li>• Benennen Ziele verteilter Datenhaltungssysteme</li> <li>• Erklären verschiedene Zielkonflikte, insbesondere das CAP-Theorem</li> </ul>	

- Unterscheiden verschiedene Varianten verteilter Datenhaltungssysteme
- Erläutern die Optionen zur Metadatenverwaltung in verteilten Datenbanken
- Definieren horizontale und vertikale Fragmentierungen für relationale Datenbanken
- Erklären die Transformationsschritte und Optimierungen der verteilten Anfrageverarbeitung anhand konkreter Beispiele
- Erklären Algorithmen zur verteilten Ausführung von Verbund-Operationen
- Erläutern die Problematik der Deadlock-Erkennung bei verteilten Sperrverfahren
- Unterscheiden die Funktionsweise von Sperrverfahren, Zeitstempelverfahren und Optimistischen Verfahren zur Synchronisation verteilter Transaktionen
- Benennen und erklären verschiedene Verfahren zur Replikationskontrolle
- Erläutern Techniken und Verfahren zur Abschwächung der Konsistenzanforderungen an replizierte Datenbestände
- Erklären die Funktionsweise hochskalierbarer No-SQL Datenbanken am Beispiel der Replikationsmechanismen im Datenbanksystem Cassandra
- Unterscheiden und erläutern Realisierungsalternativen zur Kopplung und Integration heterogener autonomer Datenbanken
- Erläutern die erweiterte Schema-Architektur für föderative Datenbanksysteme
- Erklären die Abbildungsvarianten GaV und LaV für die Implementierung Föderativer Datenbanken

#### **TAS:**

##### Die Studierenden

- Erklären die Zielsetzungen und Grenzen transaktionaler Systeme
- Unterscheiden verschiedene erweiterte Transaktionsmodelle
- Erläutern wie die Verfügbarkeit verteilter transaktionaler Systeme durch "Queued Transactions" verbessert werden kann
- Erklären typische Nebenläufigkeitsanomalien
- Erläutern mit konkreten Beispielen was Wiederherstellbarkeit und Striktheit bedeuten
- Erklären Ziele und Funktionsweise von Sperrverfahren, hierarchischen Sperrverfahren und zusätzlichen Sperrmodi
- Erläutern Isolationsstufen zur Abschwächung des Synchronisationsaufwands
- Erklären die grundlegenden Aufgaben und Funktionen eines Recovery Managers"
- Unterscheiden verschiedene Klassen von Wiederherstellungsalgorithmen
- Erklären Zweck und Funktionsweise von Checkpoints" und Fuzzy Checkpoints"

		<ul style="list-style-type: none"> <li>• Erklären im Detail wie das Zwei-Phasen Freigabeprotokoll funktioniert</li> <li>• Erläutern Ziele und Funktionsweise des Drei-Phasen-Freigabeprotokolls und Paxos-Commit</li> <li>• Erläutern die Funktionsweise verteilter Transaktionssysteme auf der Basis der standardisierten Schnittstellen in X-Open/ DTP</li> </ul>

3	Lehrende	Prof. Dr.-Ing. Andreas Maier Daniel Mosig Anamaria Dumitrescu Hakan Calim	

4	<b>Module coordinator</b>	Prof. Dr.-Ing. Andreas Maier
5	<b>Contents</b>	<p>In the initiative entitled "Road Scene Understanding for the Visually Impaired", our research team is meticulously advancing the development of the Sidewalk Environment Detection System for Assistive NavigaTION (hereinafter referred to as SENSATION). The primary objective of this venture is to enhance the mobility capabilities of blind or visually impaired persons (BVIPs) by ensuring safer and more efficient navigation on pedestrian pathways.</p> <p>For the implementation phase, a specialized apparatus has been engineered: a chest-mounted bag equipped with an NVIDIA Jetson Nano, serving as the core computational unit. This device integrates a plethora of sensors including, but not limited to, tactile feedback mechanisms (vibration motors) for direction indication, optical sensors (webcam) for environmental data acquisition, wireless communication modules (Wi-Fi antenna) for internet connectivity, and geospatial positioning units (GPS sensors) for real-time location tracking.</p> <p>Despite the promising preliminary design of the prototype, several technical challenges persist that warrant investigation.</p> <p>The "Road Scene Understanding for the Visually Impaired" initiative is actively seeking student collaborators to refine the Jetson Nano-fueled SENSATION system. Through the combination of GPS systems and cutting-edge image segmentation techniques refined for sidewalk recognition, participating teams are expected to architect an application tailored to aid BVIPs in traversing urban landscapes, seamlessly guiding them from a designated starting point to a predetermined destination.</p> <p>The developmental framework for this endeavor is based on the Python programming language; hence, prior experience with Python will be an advantage.</p> <p>For the purposes of real-world testing and calibration, the navigation part will start at the main train station in Erlangen and end at the University Library of Erlangen-Nuremberg (Schuhstrasse 1a).</p>

		<p>Technical milestones that must be completed in this project include:</p> <ul style="list-style-type: none"> <li>• Algorithmic generation of navigational pathways in Python, depending on defined start and endpoint parameters.</li> <li>• Real-time geospatial tracking to determine the immediate coordinates of the BVIP.</li> <li>• Optical recording of the current coordinates and subsequent algorithmic evaluation to check the orientation of the sidewalk.</li> </ul>

**EIS:**

Die Studierenden:

- definieren die Begriffe "Informationssysteme", "evolutionäre Informationssysteme" und "organisatorisches Lernen"
- grenzen die Begriffe "Wissen" und "Information" gegeneinander ab
- charakterisieren die in der Vorlesung erläuterten Formen der organisatorischen Veränderung
- erklären das SEKI Modell nach Nonaka und Takeuchi
- nennen Beispiele für die in der Vorlesung behandelten Formen der Wissensrepräsentation in IT-Systemen
- nennen typische Erfolgs- und Risikofaktoren für große IT-Projekte
- erklären die Kraftfeldtheorie nach Kurt Lewin
- unterscheiden Typen von Software gemäß der Klassifikation nach Lehman und Belady
- unterscheiden die in der Vorlesung vorgestellten Arten der Software Wartung
- benennen die Gesetzmäßigkeiten der Software-Evolution nach Lehman und Belady
- bewerten die in der Vorlesung vorgestellten Vorgehensmodelle zur Softwareerstellung im Kontext der E-Typ-Software
- nennen die in der Vorlesung vorgestellten Aspekte der Evolutionsfähigkeit von Software
- erklären, wie die in der Vorlesung vorgestellten Methoden zur Trennung von Belangen beitragen
- erklären das Konzept des "Verzögerten Entwurfs"
- erklären die Vor- und Nachteile generischer Datenbankschemata am Beispiel von EAV und EAV/CR
- charakterisieren die in der Vorlesung vorgestellten Architekturkonzepte
- grenzen die in der Vorlesung vorgestellten Integrationsanforderungen gegeneinander ab
- erklären wie Standards zur Systemintegration beitragen und wo die Grenzen der Standardisierung liegen
- erklären das Prinzip eines Kommunikationsservers und der nachrichtenbasierten Integration
- erklären den Begriff "Prozessintegration"
- definieren den Begriff "Enterprise Application Integration" (EAI)
- unterscheiden die in der Vorlesung vorgestellten Integrationsansätze
- erklären die in der Vorlesung vorgestellten Dimensionen der Datenqualität
- unterscheiden die grundlegenden Messmethoden für Datenqualität
- erklären das Maßnahmenportfolio zur Verbesserung der Datenqualität nach Redman
- benennen die in der Vorlesung vorgestellten Methoden zur Verbesserung der Datenqualität

10	<b>Method of examination</b>	Praktikumsleistung Klausur (120 Minuten)

		<p>Die Note für das Modul wird grundsätzlich durch die Klausur am Ende des zweisemestrigen Zyklus bestimmt.</p> <p>Die Klausur dauert 120 min.</p> <p>In beiden Semestern werden wöchentlich freiwillig zu lösende Übungsaufgaben angeboten. Die Abgabe der Lösungen innerhalb eines vorgegebenen Zeitraums kann in Gruppen von maximal 3 Studierenden erfolgen. Eine Abgabe handschriftlicher Lösungen online in digitaler Form ist grundsätzlich möglich, gedruckte Lösungen sind in jedem Fall unzulässig. Wird mindestens die Hälfte der in der Summe eines Semesters maximal zu erreichenden Punktzahl aus den abgegebenen Lösungen zu den Übungsaufgaben erreicht, wird ein Bonus von 0.3 bzw. 0.4 pro Semester auf die erzielte Klausurnote gewährt. Maximal kann daraus ein Bonus von 0.6 bzw. 0.7 Notenpunkten für die Gesamtnote des Moduls erzielt werden.</p> <p>Pro Semester des zweisemestrigen Zyklus sind 90 Semesterwochenstunden (SWS) Präsenzzeit und 135 Stunden Eigenstudium veranschlagt.</p> <p>*</p>

1	<b>Module name</b> 93174	<b>Fantastic datasets and where to find them</b>	<b>2,5 ECTS</b>
2	Courses / lectures	Zu diesem Modul sind in diesem Semester keine Lehrveranstaltungen oder Lehrveranstaltungsgruppen hinterlegt!  Yes. We expect compulsory attendance in the first three and in the last seminar sessions, which is to be communicated at the beginning of the seminar.	
3	Lehrende	No lecturers available since there are no courses / lectures for this module for this semester!	

4	<b>Module coordinator</b>	Prof. Dr. Andreas Kist	
5	<b>Contents</b>	<p>Datasets are crucial to train modern artificial intelligence algorithms. In this seminar, students will be first faced with the theoretical background of datasets, how datasets are created and disseminated, as well as comply to the FAIR principles. We will cover dataset repositories and data types. In the first three weeks, students will create their own set of data and metadata and will experience the design and creation process of a dataset.</p> <p>In the second block of the seminar, students are assigned to a given dataset from a pre-selection of datasets important in the field of machine learning and artificial intelligence. The students' task is to create an open educational resource (OER), similar to a YouTube video, about their assigned dataset explaining the back story of the dataset, as well as its usage in a contemporary context. The generation of the OER will be self-paced with the option to work on the OER during the normal seminar hours.</p> <p>In the third block, students will be assigned to two other dataset OERs of their peer group and will give constructive feedback. The constructive feedback and the OERs will be discussed in the full group. Finally, the students will incorporate the feedback to their OERs and publish them openly on a dedicated seminar YouTube channel.</p>	
6	<b>Learning objectives and skills</b>	<p><b>Subject competence</b> Students acquire broad knowledge of (biomedical) datasets and how they are created (Knowledge). Through the course, students will be able to reproduce examples of different dataset modalities and describe advantages and disadvantages of datasets (Understanding). Through the course, students will be able to classify and grade the quality of a dataset, and explain the limitations of a given dataset (Apply and Evaluate/Judge). Students will be further able to characterize data sets independently (Analyze). Students gain a comprehensive insight into which criteria are important in the construction of new data sets by creating their own one (Create).</p> <p><b>Learning or methodological competence and self-competence</b> Students learn to present a data set in a structured and coherent way through the creation of an open educational resource (OER) video. The also learn how to record, edit, compile and disseminate content.</p>	

		Students are given the opportunity to learn how to communicate effectively using their own words and give constructive feedback to others.
7	<b>Prerequisites</b>	We strongly recommend previous knowledge and ideally hands-on experience in Artificial Intelligence and/or Deep Learning to understand the implications discussed in the seminar.
8	<b>Integration in curriculum</b>	no Integration in curriculum available!
9	<b>Module compatibility</b>	Technische Schlüsselqualifikationen Master of Science Data Science 20212
10	<b>Method of examination</b>	Seminarleistung Seminar aim is to successfully create an OER (open educational resource), i.e. a Video that lasts at least 10 min *
11	<b>Grading procedure</b>	Seminarleistung (100%) The grade consists of the OER storyboard (2x weighted) and the final OER (1x weighted), which will be assessed using the following metrics: content, comprehensiveness, storyline, clarity, precise and concise presentation, quality of material and fitting the scope.

3	Lehrende	Tobias Baumeister Prof. Dr.-Ing. Dietmar Fey	

4	<b>Module coordinator</b>	Prof. Dr.-Ing. Dietmar Fey	
5	<b>Contents</b>	<p>Inhalt des Moduls sind die Grundlagen beim Aufbau eines Rechners. Dies beinhaltet die Grundkomponenten, wie das Leitwerk, das Rechenwerk, das Speicherwerk und das Ein-/Ausgabewerk. Ausgehend vom klassischen von Neumann-Rechner wird der Bogen bis zu den Architekturen moderner Rechner und Prozessoren geschlagen. Grundprinzipien der Ablaufsteuerung bei der Bearbeitung von Befehlen werden ebenso behandelt wie Aufbau und Funktionsweise eines Caches und die Architektur von Speichern im Allgemeinen. Das Konzept der Mikroprogrammierung wird erläutert. Ferner wird der Einstieg in die hardwarenahe Programmierung moderner CPUs mittels Assembler vorgestellt und erprobt. Aufbau und Funktionsweise peripherer Einheiten und Bussysteme werden ebenfalls behandelt.</p>	
6	<b>Learning objectives and skills</b>	<p>Die Studierenden kennen die Grundkomponenten eines Rechners, z. B. eines PCs, und können diese auch im Zusammenspiel als Gesamtsystem erklären, sowie die Eigenheiten verschiedener Architekturen diskutieren. Sie können die Funktionsweise von Grundkomponenten wie Leitwerk, Rechenwerk, Speicherwerk, Ein-/Ausgabewerk, Bussystemen, sowie peripherer Komponenten erläutern und in die Struktur eines Computersystems einordnen. Sie kennen den Aufbau von Caches, bzw. von Speichern im Allgemeinen und verstehen die Funktionsweise der Ablaufsteuerung, insbesondere in Bezug auf die Abarbeitung von Befehlen.</p>	

		<p>Weiterhin können die Studierenden Konzepte der Mikroprogrammierung unterscheiden, sowie hardwarenahe Programme in Assembler verstehen, modifizieren und erstellen.</p> <p>Die Studierenden kennen den Aufbau und die Funktionsweise der Architektur eines Rechners, z.B. eines PCs, und des darin enthaltenen Prozessors und verstehen auch die Gründe für deren Zustandekommen.</p>

1	<b>Module name</b> 57320	<b>Foundations of linked data</b>	<b>5 ECTS</b>
2	Courses / lectures	Vorlesung mit Übung: Foundations of Linked Data (4 SWS)	5 ECTS
3	Lehrende	Prof. Dr. Andreas Harth	

4	<b>Module coordinator</b>	Prof. Dr. Andreas Harth	
5	<b>Contents</b>	<p>The Linked Data principles provide a unified interface to data and software systems based on web architecture. Linked Data is increasingly popular in scenarios where data and systems from multiple providers have to be integrated, both in an enterprise setting and on open data from the web.</p> <p>The module covers foundational techniques to access, process and integrate data, both from a theoretical and a practical perspective, and provides a coherent treatment of protocols and languages specified by the World Wide Web Consortium. The module combines techniques from different areas, such as databases and artificial intelligence, adapted for use in a decentralised setting on the web. The overarching topic is to facilitate data integration on the basis of resource-oriented modelling, knowledge representation, hyperlinks and state transfer between user agents and servers. The module sets out with web architecture fundamentals (URIs, HTTP, hypertext), then introduces the RDF data model and Linked Data principles. It covers SPARQL querying and query processing, data integration with enterprise knowledge graphs, and vocabulary design using RDFS. The module examines formal semantics and entailment regimes (simple, RDF, RDFS, OWL LD), explores ontology modelling with OWL LD, and addresses practical data sharing via the Linked Data Platform. It concludes with combining query processing and entailment for integrated reasoning over distributed data sources.</p>	
6	<b>Learning objectives and skills</b>	<ul style="list-style-type: none"> <li>- Reading and writing RDF documents in Turtle syntax</li> <li>- Accessing and publishing RDF documents as Linked Data</li> <li>- Querying both local and online data with SPARQL</li> <li>- Translating SPARQL queries to SPARQL algebra expressions</li> <li>- Applying Linked Data technologies for Enterprise Knowledge Graphs</li> <li>- Modelling and publishing own vocabularies in RDF Schema and OWL (Web Ontology Language)</li> <li>- Defining the model-theoretic meaning of RDF graphs</li> <li>- Carrying out SPARQL query evaluation, including entailment</li> </ul>	
7	<b>Prerequisites</b>	Students should have a basic understanding of how the internet and the web work. Some knowledge of relational databases is beneficial.

The course is divided into two parts.</p> <p>In the first part, we provide an overview of numerical integration of IVPs of ODEs. We will begin with a review of the basics of ODEs, followed by the introduction of concepts of numerical integration such as error and convergence rate. Several integration methods such as RK and collocation methods will be presented and analysed.</p> <p>In the second part, we explore the conservation properties of these methods and the geometric structure underlying many important systems. Conditions for the preservation of first integrals are derived</p>	

		<p>and proven, followed by a brief introduction into symmetric methods. Next, we provide an overview of Lagrangian and Hamiltonian mechanics and some insight on the geometric structure of these systems (symplecticity, Noether's theorem). Finally, we introduce the concept of symplectic integration and the construction of variational integrators. To conclude, we will present and discuss some important results explaining the properties of these.</p> <p>During the course, an introduction to Python will be given to help the students implement these methods and test their properties.</p>
6	<b>Learning objectives and skills</b>	<p>The students</p> <ul style="list-style-type: none"> <li>• understand what an ordinary differential equation is</li> <li>• know what an initial value problem is, when a solution exists and when it is unique</li> <li>• know what a numerical solution to an initial value problem is</li> <li>• can characterise a numerical method in terms of error and convergence</li> <li>• know standard numerical integration techniques (quadrature, Runge-Kutta methods, collocation, composition...)</li> <li>• are familiar with the concept of first integral / conserved quantity</li> <li>• can argue about the conservation properties of the previously introduced methods</li> <li>• are familiar with Lagrangian and Hamiltonian systems</li> <li>• are familiar with Noether's theorem</li> <li>• are familiar with the concept of symplecticity and its relation with Hamiltonian flows</li> <li>• know how to characterise basic symplectic integrators</li> <li>• are familiar with discrete Lagrangian systems</li> <li>• can construct simple variational integrators</li> <li>• understand the concept of backward error analysis</li> </ul>
7	<b>Prerequisites</b>	Recommended: solid mathematical background, notions of programming, Lagrangian mechanics and ordinary differential equations.
8	<b>Integration in curriculum</b>	semester: 1
9	<b>Module compatibility</b>	Studienrichtung Simulation and Numerics Master of Science Data Science 20212

3	Lehrende	Prof. Dr.-Ing. Marc Stamminger Nikolai Hofmann	

4	<b>Module coordinator</b>	Prof. Dr.-Ing. Marc Stamminger	
5	<b>Contents</b>	<p>Globale Beleuchtungsberechnung ist ein Kerngebiet der Computergrafik. Ziel ist die Simulation globaler Beleuchtungseffekte wie Schatten, Spiegelungen, indirektes Licht, Kaustiken etc. In der Vorlesung wird in die theoretischen Grundlagen der globalen Beleuchtungsrechnung eingeführt und es werden Raytracing-basierte Lösungsverfahren erläutert. Themen der Vorlesung sind:</p> <ul style="list-style-type: none"> <li>• Rekonstruktion und Sampling</li> <li>• BRDFs</li> <li>• Importance Sampling</li> <li>• Umgebungsbeleuchtung</li> <li>• Rendering Gleichung</li> <li>• Path Tracing</li> <li>• Irradiance Caching</li> <li>• Photon Mapping</li> <li>• ...</li> </ul>	
6	<b>Learning objectives and skills</b>	<p>Fachkompetenz Verstehen Lernende haben ein Verständnis von Verfahren der globalen Beleuchtungsrechnung, unter anderem Monte-Carlo-Ray-Tracing, bidirectional Path-Tracing, Photon Mapping, Light Cuts, können diese in eigenen Worten wiedergeben und Beispiele anführen. Lernende können Importance Sampling für verschiedene Teilaspekte der globalen Beleuchtungsrechnung illustrieren und vergleichen und den Zusammenhang mit Multiple Importance Sampling erklären.</p> <p>Anwenden Lernende können verschiedene Samplingverfahren erklären für verschiedene hochdimensionale Integrationsprobleme der globalen Beleuchtungsrechnung anwenden.</p> <p>Analysieren Lernende können Zusammenhänge und Unterschiede von Verfahren zur globalen Beleuchtungsrechnung erkennen und Folgerungen ableiten.</p>	
7	<b>Prerequisites</b>	Die Übungen setzen Kenntnisse in C/C++ voraus.	
8	<b>Integration in curriculum</b>	semester: 1

5	<b>Contents</b>	<p>This lecture is an alternative to a functional analysis course that also covers some measure and integration theory. It is indispensable for students who want to attend advanced math courses on a master level where a profound knowledge regarding the concepts of higher analysis is required. It covers the basics of the following topics:</p> <ul style="list-style-type: none"> <li>• Measure and integral theory; Lebesgue spaces</li> <li>• Banach spaces</li> <li>• Linear functionals and operators; Hahn-Banach Theorem</li> <li>• Hilbert spaces; Orthonormal bases</li> <li>• Fourier transform (and Sobolev spaces)</li> <li>• Spectral theory of compact linear operators.</li> </ul> <p>The presentation of the material is in lecture form. The essential terms and techniques are acquired through weekly exercises and homework.</p>
6	<b>Learning objectives and skills</b>	The students learn to apply the basic principles of higher analysis, in particular, functional analysis as well as measure and integral theory.
7	<b>Prerequisites</b>	Linear Algebra I and Analysis I+II or Mathematics for Data Science I+II or comparable.
8	<b>Integration in curriculum</b>	semester: 5;1
9	<b>Module compatibility</b>	Studienrichtung Mathematische Theorie / Grundlagen der Data Science Master of Science Data Science 20212 Mathematical foundations of Data Science; Theoretical Mathematics B.Sc. Mathematics

3	Lehrende		

4	<b>Module coordinator</b>	Prof. Dr. Andreas Harth
5	<b>Contents</b>	The Internet and the Web connect the modern world which makes it imperative for students to understand and apply current Internet and Web technologies, but also to identify relevant challenges. Topics focus on current challenges or new software libraries that evolved. Students can propose their own topics in this field, especially when they plan to do their thesis in this field. Cooperation with companies is allowed and supported.
6	<b>Learning objectives and skills</b>	The students <ul style="list-style-type: none"> <li>• learn how to set up and conduct a software project involving web technologies</li> <li>• train their social and presentation skills</li> <li>• improve their understanding of modern web applications</li> </ul>
7	<b>Prerequisites</b>	Students should have proficient programming skills in one general-purpose programming language (e.g. C/C++, C#, Java, Javascript or Python). The non-mandatory standard would be Python/Java for Logic, Backend development and Javascript/Typescript for Frontend development.
8	<b>Integration in curriculum</b>	semester: 2

3	Lehrende	-	

4	<b>Module coordinator</b>	Prof. Dr.-Ing. Richard Lenz
5	<b>Contents</b>	<p>Die Vorlesung führt ein in den Aufbau und die Architektur von Datenbanksystemen, die Modularisierung und Schichtenbildung mit Abstraktionen verwenden. Schwerpunkt sind deshalb systemtechnische Aspekte von Datenbanksystemen. Die Übungen vertiefen verschiedene Aspekte an Beispielrechnungen und erweitern gelegentlich auch noch den Stoff um einige Facetten (z.B. Mehrattribut-Zugriffspfade). Ausgangspunkt einer Reihe von aufeinander aufbauenden Abstraktionen ist die Speicherung von Daten auf Hintergrundspeichern. Die erste Abstraktion ist die Datei. Dann werden Sätze eingeführt und auf verschiedene Weisen in Blöcken organisiert (sequenziell, mit Direktzugriff, indexsequentiell). Das schließt die Organisation eines Blockpuffers und Zugriffspfade (Indexstrukturen) unterschiedlichen Typs ein. Als zweite große Abstraktion werden Datenmodelle eingeführt und hier insbesondere das relationale. Das ist bereits aus dem Modul "Konzeptionelle Modellierung" bekannt, wird hier aber aus einer ganz anderen Perspektive heraus entwickelt.</p> <p>Der zweite Teil befasst sich mit der Realisierung der Leistungen eines Datenbanksystems unter Verwendung der vorher eingeführten Sätze und Zugriffspfade ("top-down"). Das umfasst die Anfrageverarbeitung und -optimierung, aber auch die Mechanismen zur Protokollierung von Aktionen und zur Wiederherstellung von Datenbankzuständen nach einem Fehler oder Ausfall. Ein laufend vervollständigtes Schichtenmodell fasst abschließend die Aufgaben in einer Architektur für Datenbank-Verwaltungssysteme zusammen. Ziel des Moduls ist es also, ein grundlegendes Verständnis für den Aufbau und die Funktionsweise eines Datenbanksystems zu vermitteln.</p>
6	<b>Learning objectives and skills</b>	<p>Die Studierenden</p> <ul style="list-style-type: none"> <li>• kennen das Schichtenmodell eines Datenbankverwaltungssystems;</li> <li>• verstehen das Prinzip der Datenunabhängigkeit (Datenabstraktion);</li> <li>• beherrschen das Aufbauprinzip einer Software-Schicht;</li> <li>• unterscheiden die Begriffe "Datenbank", "Datenbanksystem" und "Datenbankverwaltungssystem";</li> <li>• unterscheiden die Begriffe "Datenmodell" und "Schema";</li> <li>• zeigen das Konzept der blockorientierten Datei mit ihren Zugriffsoperationen auf;</li> <li>• unterscheiden einen Satz von einem Block;</li> <li>• erklären das Konzept der sequentiellen Satzdatei;</li> <li>• schildern das Prinzip der Wechselfuffertechnik;</li> <li>• charakterisieren den Schlüsselzugriff auf Sätze;</li> </ul>

		<ul style="list-style-type: none"> <li>• stellen Gestreute Speicherung (Hashing) auf der Basis von Blöcken (Buckets) dar;</li> <li>• formulieren die Funktionsweise des Virtuellen Hashings;</li> <li>• fassen die Funktionsweise eines B-Baums zusammen;</li> <li>• unterscheiden die Dienste eines B-Baums von denen des Hashings;</li> <li>• können für eine Folge von Schlüsselwerten einen B-Baum aufbauen;</li> <li>• unterscheiden einen B-Baum von einem B-Stern-Baum (B+-Baum);</li> <li>• veranschaulichen einen Bitmap-Index;</li> <li>• unterscheiden die Primär- und Sekundärorganisation von Sätzen;</li> <li>• zählen Ersetzungsstrategien der Pufferverwaltung auf und vergleichen sie;</li> <li>• benennen die Dienste einer Pufferverwaltung;</li> <li>• erklären die Konzepte "Seite" und "Segment" im Gegensatz zu "Block" und "Datei";</li> <li>• unterscheiden direkte und indirekte Seitenzuordnung;</li> <li>• interpretieren in Programmiersprachen eingebettete Anfragesprachen und Datenbank-Unterprogrammaufrufe;</li> <li>• charakterisieren Datenbank-Transaktionen;</li> <li>• kennen die Aufrufe zur Definition von Transaktionen;</li> <li>• erläutern die spaltenweise Abspeicherung von Relationen;</li> <li>• diskutieren die algebraische Optimierung von Anfragen;</li> <li>• stellen Planoperatoren eines Datenbanksystems dar;</li> <li>• unterscheiden Planoperatoren für den Verbund;</li> <li>• beschreiben Kostenformeln für die Abschätzung von Anfrageausführungen;</li> <li>• schildern die verschiedenen Anomalien im Mehrbenutzerbetrieb;</li> <li>• beschreiben die Serialisierbarkeit von Transaktionen;</li> <li>• erläutern das Konzept der Sperren in Datenbanksystemen;</li> <li>• unterscheiden physische und logische Konsistenz;</li> <li>• kennen die vier Recovery-Klassen;</li> <li>• erläutern die verschiedenen Arten von Sicherungspunkten.</li> </ul>

1	<b>Module name</b> 48410	<b>Information Theory and Coding</b> Information theory and coding	<b>5 ECTS</b>
2	Courses / lectures	Übung: Informationstheorie und Codierung - Übung (1 SWS) Vorlesung: Informationstheorie und Codierung (3 SWS)	- 5 ECTS
3	Lehrende	Prof. Dr.-Ing. Ralf Müller	

4	<b>Module coordinator</b>	Prof. Dr.-Ing. Ralf Müller
5	<b>Contents</b>	<p>1. Introduction: binomial distribution, (7,4)-Hamming code, parity-check matrix, generator matrix</p> <p>2. Probability, entropy, and inference: entropy, conditional probability, Bayes law, likelihood, Jensens inequality</p> <p>3. Inference: inverse probability, statistical inference</p> <p>4. The source coding theorem: information content, typical sequences, Chebychev inequality, law of large numbers</p> <p>5. Symbol codes: unique decidability, expected codeword length, prefix-free codes, Kraft inequality, Huffman coding</p> <p>6. Stream codes: arithmetic coding, Lempel-Ziv coding, Burrows-Wheeler transform</p> <p>7. Dependent random variables: mutual information, data processing lemma</p> <p>8. Communication over a noisy channel: discrete memory-less channel, channel coding theorem, channel capacity</p> <p>9. The noisy-channel coding theorem: jointly-typical sequences, proof of the channel coding theorem, proof of converse, symmetric channels</p> <p>10. Error-correcting codes and real channels: AWGN channel, multivariate Gaussian pdf, capacity of AWGN channel</p> <p>11. Binary codes: minimum distance, perfect codes, why perfect codes are bad, why distance isnt everything</p> <p>12. Message passing: distributed counting, path counting, low-cost path, min-sum (=Viterbi) algorithm</p> <p>13. Exact marginalization in graphs: factor graphs, sum-product algorithm</p> <p>14. Low-density parity-check codes: density evolution, check node degree, regular vs. irregular codes, girth</p> <p>15. Lossy source coding: transform coding and JPEG compression</p> <p>--</p> <p>1. Einleitung: Binomialverteilung, (7,4)-Hamming-Code, Paritätsmatrix, Generatormatrix</p> <p>2. Wahrscheinlichkeit, Entropie und Inferenz: Entropie, bedingte Wahrscheinlichkeit, Bayessches Gesetz, Likelihood, Jensensche Ungleichung</p> <p>3. Inferenz: Inverse Wahrscheinlichkeit, statistische Inferenz</p> <p>4. Das Quellencodierungstheorem: Informationsgehalt, typische Folgen, Tschebyschevsche Ungleichung, Gesetz der großen Zahlen</p> <p>5. Symbolcodes: eindeutige Dekodierbarkeit, mittlere Codewortlänge, präfixfreie Codes, Kraftsche Ungleichung, Huffmancodierung</p>

		<p>6. Stromcodes: arithmetische Codierung, Lempel-Ziv-Codierung, Burrows-Wheeler-Transformation</p> <p>7. Abhängige Zufallsvariablen: Transinformation, Datenverarbeitungslemma</p> <p>8. Kommunikation over gestörte Kanäle: diskreter gedächtnisloser Kanal, Kanalcodierungstheorem, Kanalkapazität</p> <p>9. Das Kanalcodierungstheorem: verbundtypische Folgen, Beweis des Kanalcodierungstheorems, Beweis des Umkehrsatzes, symmetrische Kanäle</p> <p>10. Fehlerkorrigierende Codes und reale Kanäle: AWGN-Kanal, mehrdimensionale Gaußsche WDF, Kapazität des AWGN-Kanals</p> <p>11. Binäre Codes: Minimaldistanz, perfekte Codes, Warum perfekte Codes schlecht sind, Warum Distanz nicht alles ist</p> <p>12. Nachrichtenaustausch: verteiltes Zählen, Pfadzählen, günstigster Pfad, Minimumsummenalgorithmus</p> <p>13. Exakte Marginalisierung in Graphen: Faktorgraph, Summenproduktalgorithmus</p> <p>14. LDPC-Codes: Dichteevolution, Knotenordnung, reguläre und irreguläre Codes, Graphumfang</p> <p>15. Verlustbehaftete Quellencodierung: Transformationscodierung und JPEG-Kompression</p>
6	<p><b>Learning objectives and skills</b></p>	<p>The students apply Bayesian inference to problems in both communications and everyday's life.</p> <p>The students explain the concept of digital communications by means of source compression and forward-error correction coding.</p> <p>For the design of communication systems, they use the concepts of entropy and channel capacity.</p> <p>They calculate these quantities for memoryless sources and channels.</p> <p>The students proof both the source coding and the channel coding theorem.</p> <p>The students compare various methods of source coding with respect to compression rate and complexity.</p> <p>The students apply source compression methods to measure mutual information.</p> <p>The students factorize multivariate functions, represent them by graphs, and marginalize them with respect to various variables.</p> <p>The students explain the design of error-correcting codes and the role of minimum distance.</p> <p>They decode error-correcting codes by means of maximum-likelihood decoding and message passing.</p> <p>The students apply distributed algorithms to problems in both communications and everyday's life.</p> <p>The students improve the properties of low-density parity-check codes by widening the girth and/or irregularity in the degree distribution.</p> <p>The students transform source images into the frequency domain to improve lossy compression.</p> <p>--</p> <p>Die Studierenden wenden Bayessche Inferenz auf Probleme in der Nachrichtentechnik und im Alltagsleben an.</p>

		<p>Die Studierenden erklären die konzeptuelle Trennung von digitaler Übertragung in Quellen- und Kanalcodierung. Kommunikationssysteme entwerfen sie unter Betrachtung von Entropie und Kanalkapazität.</p> <p>Sie berechnen diese Größen für gedächtnislose Quellen und Kanäle. Die Studierenden beweisen sowohl das Quellen- als auch das Kanalcodierungstheorem.</p> <p>Die Studierenden vergleichen verschiedenartige Quellencodierungsverfahren hinsichtlich Komplexität und Kompressionsrate.</p> <p>Die Studierenden verwenden Quellencodierverfahren zur Messung von Transinformation.</p> <p>Die Studierenden faktorisieren Funktionen mehrerer Veränderlicher, stellen diese als Graph dar und marginalisieren sie bezüglich mehrerer Veränderlicher.</p> <p>Die Studierenden erklären den Entwurf von Kanalcodes und den Einfluss der Minimaldistanz.</p> <p>Sie decodieren Kanalcodes gemäß maximaler Likelihood und Nachrichtenaustausch.</p> <p>Die Studierenden wenden verteilte Algorithmen auf Probleme der Nachrichtentechnik und des Alltagslebens an.</p> <p>Die Studierenden verbessern die Eigenschaften von LDPC-Codes durch Erhöhung des Umfangs und/oder durch irreguläre Knotenordnungsverteilungen.</p> <p>Die Studierenden transformieren Bildquellen zur Verbesserung verlustbehafteter Kompression in den Frequenzbereich.</p>

4	<b>Module coordinator</b>	Prof. Dr. Kathrin Möslein
5	<b>Contents</b>	The lecture focuses on the challenges of leading and communicating innovation and change in IT enabled companies and networked organizations. Based upon that, creating a sustainable innovative environment is a leadership task. In order to succeed at this task, leaders must develop innovative abilities to deal with the challenges inherent in a business environment characterized by fluid, unstructured and changing information. The aim of this course is thereby twofold. First, the course delineates and describes different yet emerging innovation tools, organizing them into a coherent set of classes. Each class of tools is described using a set of up-to-date business cases that depict the current status of the information systems. The second aim of this course is to get an overview of how to structure leadership systems towards innovation, how leaders can motivate to foster innovative thinking and what new forms of innovation (e.g. open innovation) mean for the definition of leadership. In doing so, this lecture represents an Idea Transformation Class as students are encouraged not only to merely develop, but to actively deploy specifically developed concepts.
6	<b>Learning objectives and skills</b>	The students <ul style="list-style-type: none"> <li>• will understand and explore the theories and practicalities of leadership in open innovation contexts.</li> <li>• will gain knowledge on leading and communicating innovation and translate it in leadership behavior in real case contexts.</li> <li>• will learn to assess, reflect and feedback the impact of practical leadership for innovation</li> </ul>
7	<b>Prerequisites</b>	<ul style="list-style-type: none"> <li>• Basic understanding of innovation management</li> <li>• Basic understanding of management processes</li> <li>• First experience in team projects</li> </ul>

2	Courses / lectures	Vorlesung: Interfacing the Neuromuscular system: Applications for Human/Machine Interfaces and Neurophysiology (4 SWS)	5 ECTS
3	Lehrende	Charlotte Rohleder Janina Kloos Prof. Dr. Alessandro Del Vecchio	

4	<b>Module coordinator</b>	Prof. Dr. Alessandro Del Vecchio	
5	<b>Contents</b>	<p>Module: Principles of Neural control of movement and neuroengineering How the central nervous system controls muscle forces; Neurons, upper and lower motoneurons, Cortical and brainstem function, Interneurons and Motor Units. Neuroengineering applications for studying the neural control of movement; invasive and non-invasive recordings, electrical stimulation of the nervous system.</p> <p>Module: Electrophysiology Generation of an action potential; HodgkinHuxley model, difference between intracellular and extracellular action potential, sparsity of the action potential in a matrix of electrodes. Recording electrophysiological data in humans; examples of EMG and EEG recordings.</p> <p>Module: Applications to Human/Machine Interfaces Biosignal processing; data with high temporal resolution, identification of individual neurons, associations between neuronal discharge times and behaviour; control of prosthetic devices from EMG signals in amputees and neurodegenerative and neurotraumatic diseases.</p> <p>Module: Applications to Neurophysiology Neuronal encoding of behaviour; motor unit physiology in humans; motoneuron properties, longitudinal assessment of neuronal function.</p> <p>Module: MATLAB / Python practical coursework Extraction of neural information from electrophysiological signals; associations of information between electrophysiological signals and behavioural data; Experiment in humans.</p>	
6	<b>Learning objectives and skills</b>	<p>The students will acquire in-depth skills in the acquisition, analysis, and interpretation of electrophysiological data with a specific focus on human recordings in health and pathological conditions (e.g., spinal cord injury, stroke, and Parkinsons disease). The goal of this course is to teach the current methods in man/machine interfaces and neurophysiological applications. The course will provide information on the neural circuitries that determine coordinated movement. The specific focus is on the motor system that regulates skilled motor behaviour. We will study the physiological pathways of the motor system and the effect of neurodegenerative diseases that affect this system. Ultimately, this course will give students a robust overview of how to use electrophysiology in order to assist individuals with neural impairments.</p>	

7	<b>Prerequisites</b>	No compulsory prerequisites. Recommended: Basic biology and neurophysiology, Computer programming (Matlab and/or Python), Biosignal processing.

5	<b>Contents</b>	In today's interconnected world, cybersecurity plays a critical role in safeguarding sensitive information and ensuring the integrity, confidentiality, and availability of digital assets. The "Introduction to Cybersecurity Fundamentals in Networking" course provides students with a comprehensive understanding of the foundational principles, concepts, and practices of cybersecurity within the context of networking environments. Through a combination of theoretical lectures, hands-on lab exercises, and real-world case studies, students will explore key topics including security principles, risk management, access controls, cryptography, network security protocols, and emerging technologies. The course also covers the importance of cybersecurity for businesses and individuals, emphasizing the identification and mitigation of common security threats, vulnerabilities, and attack vectors. Additionally, students will learn about compliance with industry standards and regulations, such as GDPR and HIPAA, and explore emerging trends in network security, including blockchain and IoT. By the end of the course, students will have developed a solid foundation in cybersecurity fundamentals, equipped with the knowledge, skills, and competencies needed to address the evolving challenges of cybersecurity in today's digital landscape.
6	<b>Learning objectives and skills</b>	<ul style="list-style-type: none"> <li>• Understand core cybersecurity principles and their significance for businesses.</li> <li>• Identify and mitigate common network threats and vulnerabilities.</li> <li>• Develop skills in securing network devices, implementing access controls, enforcing security policies, and best practices.</li> <li>• Knowledge of fundamental principles and concepts of cybersecurity.</li> <li>• Knowledge of cryptographic techniques and various network security protocols.</li> <li>• Gain practical experience through hands-on lab exercises and case studies.</li> </ul>

4	<b>Module coordinator</b>	Prof. Dr. Vasileios Belagiannis	
5	<b>Contents</b>	<p>This is an advanced level lab course in machine learning. Imagine a car driving on an autobahn in an automatic mode. Among other things, the car needs to steer itself to keep driving in it's own lane. To accomplish this,</p> <p>the central problem is to detect the road-lane markings. These are the white solid or dashed lines that are drawn on each side of the lane. The standard modern approach to solve this type of problems is to take a large dataset of labeled examples and train a deep neural network model to accomplish the task. This is how car and pedestrian detection algorithms are developed. The difficulty with the road-lane markings is that there is no labeled dataset of them and creating such dataset would cost millions of dollars.</p> <p>In this lab course we will solve this problem using transfer learning and mathematical modeling:</p> <ul style="list-style-type: none"> <li>• Create cartoon-like artificial images of a road with known locations for the lane markings.</li> <li>• Train deep neural network on these artificial images with heavy data augmentations that mimic real-world images.</li> <li>• Create a dataset of unlabeled real-life videos by downloading and organizing examples from youtube.</li> <li>• Create a machine learning pipeline for working with these videos efficiently.</li> <li>• Apply the neural network that has been trained on artificial data to the real world videos.</li> <li>• Analyze the quality of results produced by the network.</li> <li>• Use mathematical modeling to correct the outputs of the network.</li> <li>• Retrain the network on the dataset composed of the corrected outputs.</li> <li>• Measure and analyze the quality of the results.</li> </ul> <p>The software will be written in Python using JupyterLab development framework. Access to modern GPU server will be provided. The best students will have the opportunity to contribute to the creation of state-of-the-art lane detection system for self-driving cars during or after the course.</p>	
6	<b>Learning objectives and skills</b>	Students are able to:	

		<ul style="list-style-type: none"> <li>Independently design machine learning pipelines to solve complex problems in artificial intelligence.</li> <li>Choose appropriate algorithms for the problem at hand.</li> <li>Use standard packages for machine learning in Python: numpy, cvxpy, scikit-learn, pywavelets, pytorch.</li> <li>Debug and calibrate machine learning algorithms. Develop modification to the standard algorithms as appropriate to the problem at hand.</li> <li>Explain the theoretical aspects of deep learning.</li> </ul>
7	<b>Prerequisites</b>	Knowledge of Python programming language is required. Basic theoretical knowledge in machine learning is assumed: consider taking the Machine Learning in Signal Processing (MLSIP) course in the same semester.
8	<b>Integration in curriculum</b>	semester: 1

4	<b>Module coordinator</b>	Prof. Dr.-Ing. Andre Kaup
5	<b>Contents</b>	<p>Today, many image and video signal processing applications are running on embedded systems. However, the computational power and the energy storage is a limiting demand for embedded systems. Nevertheless, daily mobile devices like smartphone and tablet are able to perform signal processing tasks for image and video signals, for example coding of images and videos, the creation of a panorama or the calculation of images with high dynamic range.</p> <p>The image and video signal processing on embedded systems lab course should show the challenges that occur while handling with such mobile devices and the implementation of such algorithm on an embedded system. Therefore, Raspberry Pis as embedded systems and Python as coding language is used in the laboratory. The experiments include the setup of the Raspberry Pi, an introduction to Python and an introduction to image and video signal processing. In addition, a camera will be connected, signal processing will be done with the camera and digital filters are implemented. Moreover, the laboratory includes different computer vision applications like the creation of a panorama.</p>
6	<b>Learning objectives and skills</b>	<p>The students</p> <ul style="list-style-type: none"> <li>• understand the challenges of the embedded system</li> <li>• make use of the coding language Python for image and video signal processing algorithms</li> <li>• implement functional programs with Python</li> <li>• evaluate the blocks of computer vision algorithms</li> <li>• evaluate the self-implemented programs by subjective and objective comparison</li> <li>• reflect the learning process in the laboratory.</li> </ul>
7	<b>Prerequisites</b>	None
8	<b>Integration in curriculum</b>	no Integration in curriculum available!
9	<b>Module compatibility</b>	Multimedia Engineering Master of Science Data Science 20212
10	<b>Method of examination</b>	<p>Praktikumsleistung</p> <p>The laboratory is based on nine experiments, which are described in the laboratory script. Every experiment has to be prepared at home and will be checked before every experiment. The results of the prepared tasks in the laboratory will be checked at the end</p>

		of the experiment. For this, the participants have to explain their developed results to the supervisors. The laboratory is passed if all nine experiments are successfully completed.

15	<b>Teaching and examination language</b>	english
16	<b>Bibliography</b>	The laboratory script "Image and video signal processing on embedded platforms will be handed out in the first session.

1	<b>Module name</b> 97651	<b>Laborpraktikum Image and Video Compression</b> Laborpraktikum Multimediakommunikation	<b>2,5 ECTS</b>
2	Courses / lectures	No teaching units are offered for the module in the current semester. For further information on teaching units please contact the module managers.	
3	Lehrende		

4	<b>Module coordinator</b>	Prof. Dr.-Ing. Andre Kaup	
5	<b>Contents</b>	<b>Content</b> <ul style="list-style-type: none"> <li>• Introduction to MATLAB</li> <li>• Implementation of the single video codec processing blocks</li> <li>• Integration into the video codec pipeline, tests, and extensions</li> <li>• Participation in a subjective video test of selected implementations</li> <li>• Presentation and discussion of the achieved results</li> </ul>	
6	<b>Learning objectives and skills</b>	The students <ul style="list-style-type: none"> <li>• create a fully functional program using the programming environment MATLAB,</li> <li>• evaluate the processing blocks of a typical video codec,</li> <li>• design their own video codec and enhance it by extensions of their choice,</li> <li>• evaluate their implemented video codecs in a subjective comparison,</li> <li>• reflect upon the methods conveyed during the laboratory.</li> </ul>	
7	<b>Prerequisites</b>	None	
8	<b>Integration in curriculum</b>	semester: 1	
9	<b>Module compatibility</b>	Multimedia Engineering Master of Science Data Science 2012	
10	<b>Method of examination</b>	Praktikumsleistung The lab course comprises ten sessions of four hours plus two sessions of two hours, which include 7 work packages, a subjective test, and a final presentation. Each work package requires a preparation in written form and will be checked and reviewed (pass/fail) before the start of each session. During each of the ten mandatory lab sessions, the students are required to work on programming tasks, which will be reviewed at the end of each session (pass/fail). After these ten programming sessions, a working video codec has to be handed in. Besides, the students have to participate a subjective test, where the codec results are evaluated. In the last session, each video codec has to be presented by the students. A certificate confirming the successful participation in the laboratory is received if all work packages have been sufficiently prepared and implemented, if the results of all work packages have been combined into a functional and running video codec which is suitable for subjective testing, if the subjective video test has been participated in, and if the final video codec has been presented during the final presentation.

6	<b>Learning objectives and skills</b>	<p>Studierende, die das Modul erfolgreich abgeschlossen haben:</p> <ul style="list-style-type: none"> <li>- nennen unterschiedliche Ausprägungen von Cloud-Computing.</li> <li>- erläutern verschiedene Cloud-Architekturen.</li> <li>- stellen Vor- und Nachteile von Cloud-Computing gegenüber.</li> <li>- unterscheiden die Herangehensweisen bei der Entwicklung von SOAP- im Vergleich zu REST-Anwendungen.</li> <li>- organisieren den Austausch von Informationen in einer verteilten Anwendung unter Verwendung eines Verzeichnisdienstes.</li> <li>- entwickeln eigene auf Web-Services basierende Anwendungen.</li> <li>- bewerten die Vor- und Nachteile der Bündelung von Nachrichten beim Aufruf von Web-Services.</li> <li>- erläutern die Anforderungen an ein virtualisiertes System.</li> <li>- beschreiben die für die Virtualisierung eines Systems erforderlichen Kriterien.</li> <li>- vergleichen zwischen unterschiedlichen Virtualisierungstechniken und -ebenen.</li> <li>- schildern den Aufbau und die Funktionsweise von Xen und Linux-VServer.</li> <li>- erproben das Einrichten eines Abbilds für eine virtuelle Maschine.</li> <li>- skizzieren die Architektur einer Infrastruktur-Cloud sowie die Aufgabenbereiche hierfür zentraler Komponenten am Beispiel von Eucalyptus.</li> </ul>	

- erproben das Bereitstellen von Anwendungen in einer Infrastruktur-Cloud.
- zeigen die Grundlagen Software-definierter Netzwerke am Beispiel von Onix und B4 auf.
- bewerten verschiedene im Bereich Cloud-Computing zum Einsatz kommende Datenspeichersysteme (Google File System, Bigtable, Windows Azure Storage, Amazon Dynamo) hinsichtlich der Kriterien Verfügbarkeit, Konsistenz und Partitionstoleranz.
- erläutern eine auf Vektoruhren basierende Methode zur Auflösung im Zusammenhang mit letztendlicher Konsistenz auftretender Konflikte.
- entwickeln ein verteiltes, repliziertes Dateisystem nach dem Vorbild von HDFS, das auf die hierarchische Speicherung großer Datenmengen ausgelegt ist.
- erkunden das Bereitstellen selbst entwickelter Dienste mittels Docker.
- erstellen ein Framework zur parallelen Bearbeitung von Daten nach dem Vorbild von MapReduce.
- konzipieren eigene MapReduce-Anwendungen zur Verarbeitung strukturierter bzw. unstrukturierter Rohdaten.
- diskutieren die Fehlertoleranzmechanismen in Google MapReduce.
- schildern die grundsätzliche Funktionsweise von Systemen zur Kühlung von Datenzentren mittels Umgebungsluft.
- beschreiben das Grundkonzept einer temperaturabhängigen Lastverteilung von Prozessen in einem Datenzentrum.
- stellen diverse Ansätze zur Erhöhung der Energieeffizienz von MapReduce-Clustern gegenüber.
- unterscheiden die Architekturen und Funktionsweisen der Koordinierungsdienste Chubby und ZooKeeper.
- entwickeln einen eigenen Koordinierungsdienst nach dem Vorbild von ZooKeeper.
- ermitteln die Konsistenzeigenschaften der eigenen Koordinierungsdienstimplementierung.
- erläutern unterschiedliche Ansätze zur Reduzierung bzw. Tolerierung von Tail-Latenz.
- skizzieren das Grundkonzept von Erasure-Codes.
- beschreiben den Aufbau eines auf die Clouds mehrerer Anbieter gestützten Datenspeichersystems.
- erläutern den Einsatz passiver Replikation zur Bereitstellung von Fehlertoleranzmechanismen für virtuelle Maschinen am Beispiel von Remus.
- schildern die Grundlagen der Migration von virtuellen Maschinen.
- bewerten die Qualität einer aktuellen Publikation aus der Fachliteratur.
- erschließen sich typische Probleme (Nebenläufigkeit, Konsistenz, Skalierbarkeit) und Fehlerquellen bei der Programmierung verteilter Anwendungen.
- können in Kleingruppen kooperativ arbeiten.
- können ihre Entwurfs- und Implementierungsentscheidungen kompakt präsentieren und argumentativ vertreten.
- können offen und konstruktiv mit Schwachpunkten und Irrwegen umgehen.

		- reflektieren ihre Entscheidungen kritisch und leiten Alternativen ab.
7	<b>Prerequisites</b>	Gute Programmierkenntnisse in Java

4	<b>Module coordinator</b>	Prof. Dr. Vasileios Belagiannis	
5	<b>Contents</b>	<p>This course is an introduction into machine learning and artificial intelligence. The special emphasis is on applications to modern signal processing problems. The course is focused on design principles of machine learning algorithms. The lectures start with a short introduction, where the nomenclature is defined. After this, probabilistic graphical models are introduced and the use of latent variables is discussed, concluding with a discussion of hidden Markov models and Markov fields. The second part of the course is about deep learning and covers the use of deep neural networks for machine learning tasks. In the last part of the lecture, the use of deep neural networks for speech processing tasks is introduced.</p> <p>The course is based on the materials and video footage from Dr. Roland Maas. He is an outstanding machine learning expert and a former member of the Chair of Multimedia Communications and Signal Processing.</p>	
6	<b>Learning objectives and skills</b>	<p>After attending the lecture, students will be able to</p> <ul style="list-style-type: none"> <li>• understand regression and classification problems</li> <li>• apply PDF estimation algorithms</li> <li>• understand Gaussian mixture models and expectation-maximization</li> <li>• apply principal component analysis and independent component analysis</li> <li>• assess different estimation algorithms</li> <li>• explain the application of machine learning to system identification</li> <li>• apply hidden Markov models</li> <li>• understand different artificial neural network architectures</li> <li>• explain deep learning principles</li> <li>• apply artificial neural networks</li> <li>• devise learning strategies for deep neural networks</li> <li>• assess the application of deep neural networks for speech processing tasks.</li> </ul>

5	<b>Contents</b>	In this module, the physical and technical basics of MRI are taught in detail. The principles of data acquisition are explained and various examples are shown. Imperfections in the data acquisition lead to image artifacts that cannot be avoided in all cases. Strategies for detecting and avoiding image artifacts are explained. One of the great strengths of MRI in medical diagnostics is the ability to acquire images with different contrasts. The origin of the frequently used T1 and T2 weighted image contrasts is discussed in detail. Various MRI sequence techniques are also discussed."	
6	<b>Learning objectives and skills</b>	<p>The participants</p> <ul style="list-style-type: none"> <li>• understand the principles, properties and limits of basic MRI techniques</li> <li>• develop the ability to choose an appropriate basic MRI sequence and to set up the corresponding sequence parameters for a range of basic applications</li> <li>• are able to explain MRI techniques, algorithms and concepts of the lecture to other engineers.</li> </ul>

4	<b>Module coordinator</b>	Prof. Dr. Michael Amberg
5	<b>Contents</b>	<p><b>Lect1/Ex1:</b> The traditional role of the Chief Information Officer (CIO) as gatekeeper of technology and protector of corporate information asset activities is changing. Next to the daily duties to keep the IT operations and projects running often facing shrinking budget constraints an enterprise IT manager becomes an important business partner in supporting the transformation of the traditional business to the digital age. The course has a strong focus on the role of IT within different types of enterprises and highlights IT from two different angles: IT as organizational function and IT as driver of organizational transformation. The lecture is divided into two parts (1) IT Management in enterprises (2) IT-driven business models</p> <p><b>Lect2/Ex2:</b> Increasing globalization of business operations and the high importance of project structures for global operations force companies worldwide to develop and strengthen their capabilities for managing global projects. Therefore, future professionals capable of successfully coordinating projects across multiple countries and cultures will have excellent career prospects. To prepare students for the task of managing global projects, the course will focus on the following topics:</p> <ul style="list-style-type: none"> <li>• Characteristics and organization of global projects</li> <li>• Cultural influences (effects and remedies)</li> <li>• Controlling of globally distributed projects</li> <li>• Challenges of IS outsourcing/offshoring projects</li> </ul> <p>For each of these topics, students will be given an introduction to the topic (knowledge transfer) and then work on real-world examples to gain deeper insights into the topic (knowledge application).</p> <p>In addition, students will work in teams on a project during the semester.</p>
6	<b>Learning objectives and skills</b>	<p><b>Lect1/Ex1 and Lect2/Ex2:</b></p> <p>The main goal of the course is to familiarize students with the foundations of successful management in global IT-projects.</p> <p>The students will</p> <ul style="list-style-type: none"> <li>• describe and explain key IT Management models,</li> <li>• describe the project life cycle,</li> </ul>

		<ul style="list-style-type: none"> <li>• explain and evaluate design options of an IT organization and challenges of the CIO,</li> <li>• explain main organizational IT cost categories and tasks of managing IT costs,</li> <li>• describe components of a (digital) business model,</li> <li>• evaluate (digital) business models,</li> <li>• evaluate challenges caused by distance in globally distributed projects and learn about the approaches of dealing with them,</li> <li>• evaluate IT archetypes and decision domains,</li> <li>• evaluate PMOs in (IT) organization analyze different collaboration tools,</li> <li>• understand the impact of new technologies, such as Big Data Technologies, on value creation.</li> </ul>
7	<b>Prerequisites</b>	<ul style="list-style-type: none"> <li>• Lect1/Ex1: None</li> <li>• Lect2/Ex2: Basic knowledge on project management principles and techniques</li> </ul>

5	<b>Contents</b>	<p>Künstliche-Intelligenz Forschung ist der Versuch, menschenähnliche Denkprozesse auf Maschinen zu übertragen. Das betrifft insbesondere Wahrnehmung (nicht nur Sensordaten, sondern auch Bild- und Audio-daten), Modellierung (Untersuchung von Zusammenhängen in Beobachtungen) und Aktionsplanung (für optimale Aktionsplanung ist ein Modell zur Beurteilung vorgeschlagener Aktionen essenziell). Die Mathematik der Neuronalen Netze wurde von Anfang an als adäquate Lösungsmethode gesehen es dauerte aber ein halbes Jahrhundert, bis diese Mathematik und die Computer Hardware soweit entwickelt waren, dass die Vision tatsächlich bearbeitet werden kann.</p> <p>Im Wintersemester zeigen wir, in welchem Sinne Feedforward Neuronale Netze universelle Approximatoren für komplexe (d.h. nichtlineare und hochdimensionale) Systeme sind. Es wird dargestellt, dass sich das Lernen nicht auf die klassische Sichtweise einer nichtlinearen Regression beschränken lässt. Das liegt auch, aber nicht nur an den Weiterführungen zum Thema Deep-Learning. Wir werden auf die Unterschiede zwischen Regression und Klassifikation eingehen. Weiterführende Kapitel beschäftigen sich mit Unüberwachtem Lernen, Bilderkennung, Neuro-Fuzzy und komplexwertigen Systemen. In der Vorlesung wird auch darauf eingegangen, dass unsere Humane Intelligenz noch andere Qualitäten hat wir sollten Künstliche- und Humane-Intelligenz nicht als Verdrängungswettbewerb sehen, sondern nach einer optimalen Ergänzung suchen.</p>	
6	<b>Learning objectives and skills</b>	<p>Die Studierenden</p> <ul style="list-style-type: none"> <li>• erkennen selbständig Aufgabenstellungen, in denen Neuronale Netze eine hilfreiche Lösungsmethode sind</li> <li>• sind in der Lage, die richtigen Netzstrukturen für echte Anwendungsprobleme zu konstruieren.</li> </ul>

4	<b>Module coordinator</b>	Dr. Hans Georg Zimmermann	
5	<b>Contents</b>	<p><i>The focus of this lecture is on the analysis of dynamical systems, or on data which are generated by dynamical systems. Time is a strong structure in modelling, which allows an in depth structural analysis before we touch data. An example is the following question: in which way influences past the present time?. The answer is a modelling of memory: how can we do this in an efficient way?. Large dynamical system (especially in economics) are only partially observable: how to handle the missing information?. In which way learning is helpful to solve this problem?. In many real world applications the dimensionality of the observables and even more the underlying state space is very large – if the dynamics evolves along a manifold in these large spaces, how can we use the manifold to make the task tractable?. In different coordinate systems the same observed dynamics might look different complicated: what is an optimal coordinate system to do the analysis and forecasting of a dynamical system?. A question which is always popping up in the challenge of forecasting is on the minimal number of observables: which are the relevant ones?. And Last but not least, if you do a prediction, are you able to say something about the uncertainty of the forecast?. In our neural network framework we can define descriptions of uncertainties beyond an expanding normal distribution. In the context of artificial intelligence it is natural, not only to ask for a good modelling but a combined optimal action planning. In which way we merge model building and action planning?. Finally we will touch the discussion between artificial intelligence entities and humans.</i></p>	
6	<b>Learning objectives and skills</b>	The students independently recognize tasks in which neural networks are a helpful solution method and are able to construct the correct network structures for real application problems.	
7	<b>Prerequisites</b>	<i>Mathematical basics from the bachelor's degree. It is recommended to have attended the lecture during the winter semester. (Part I).</i>

5	<b>Contents</b>	This course provides a unified mathematical perspective on control theory and machine learning. It introduces key concepts from the analysis of dynamical systems governed by Ordinary and Partial Differential Equations (ODEs and PDEs), including controllability, observability, and stability. Building on these principles, the course explores how control-theoretic and optimization-based methods provide insight into the dynamics of state-of-the-art machine learning systems, including deep neural networks, federated learning frameworks, and large language models (LLMs).	
6	<b>Learning objectives and skills</b>	By the end of the course, students will have developed a solid understanding of the mathematical and dynamical foundations underlying control and learning systems. They will be able to analyze the optimization and stability properties of deep learning algorithms, and explain how control-theoretic principles extend to large-scale models such as large language models (LLMs). Furthermore, students will be trained to deliver clear and rigorous scientific presentations of technical concepts and research results.	
7	<b>Prerequisites</b>	Basic knowledge of calculus, linear algebra, ODE and PDE.

1	<b>Module name</b> 48241	<b>Mathematical Image Processing</b>	<b>5 ECTS</b>
2	Courses / lectures	<p>Vorlesung mit Übung: Mathematical Image Processing (2 SWS)</p> <p>Tutorium: Tutorial for Mathematical Image Processing (2 SWS)</p> <p>This module is offered in every second summer term. The next course will be held in the summer semester 2024.</p>	5 ECTS -
3	Lehrende	Prof. Dr. Daniel Tenbrinck	

4	<b>Module coordinator</b>	Prof. Dr. Daniel Tenbrinck
5	<b>Contents</b>	<p>This module covers mathematical image processing techniques based on Fourier domain filters, variational methods, and partial differential equations.</p> <p>In particular, the following content will be introduced to the students:</p> <ul style="list-style-type: none"> <li>• contrast enhancement</li> <li>• filtering in Fourier and image domain</li> <li>• Bayesian image denoising</li> <li>• image deblurring / deconvolution</li> <li>• pixel-based clustering</li> <li>• region-based segmentation</li> <li>• image inpainting</li> <li>• nonlocal image processing using graphs</li> </ul>
6	<b>Learning objectives and skills</b>	<p>Students following this course will</p> <ul style="list-style-type: none"> <li>• learn how image data can be modeled and analyzed mathematically</li> <li>• develop a deeper understanding of mathematical basics and methods for image processing</li> <li>• implement own algorithms for mathematical image processing</li> <li>• discover connections to related mathematical fields, e.g., inverse problems and convex analysis</li> </ul>
7	<b>Prerequisites</b>	<p>Knowledge in calculus and linear algebra is <b>recommended</b> to understand the mathematical foundations of image processing.</p> <p>Knowledge in functional analysis, numerical mathematics, or inverse problems is <b>helpful</b> to understand advanced concepts in mathematical image processing.</p>
8	<b>Integration in curriculum</b>	semester: 2;1
9	<b>Module compatibility</b>	<p>Studienrichtung Mathematische Theorie / Grundlagen der Data Science Master of Science Data Science 20212</p> <p>Studienrichtung Simulation and Numerics Master of Science Data Science 20212</p>
10	<b>Method of examination</b>	<p>schriftlich oder mündlich</p> <p>Oral examination (20 min.) or written examination (60 min.) depending on size of course.</p> <p>*</p>

11	<b>Grading procedure</b>	schriftlich oder mündlich (100%) Oral exam (100%) or written exam (100%) depending on size of course.

5	<b>Contents</b>	<p>The MT II module is aimed at students of the medical engineering degree programme and is one of the basic lectures there in the field of informatics. Methods and devices that process and display the anatomy and function of the body for diagnosis and therapy are explained. Emphasis is placed on understanding and applying basic algorithms of medical image processing, such as segmentation, filtering and image reconstruction. Modalities presented include X-ray systems, computed tomography (CT), magnetic resonance imaging (MRI), optical coherence tomography (OCT) and ultrasound (US).</p>
6	<b>Learning objectives and skills</b>	<p>The students will</p> <ul style="list-style-type: none"> <li>• recognise and reproduce essential methods and modalities of medical imaging</li> <li>• understand and explain basic physical principles of medical imaging</li> <li>• independently apply acquired knowledge of methods to interdisciplinary problems in medicine and engineering sciences</li> <li>• implement algorithms of medical imaging (the programming language will be announced at the first lecture meeting)</li> <li>• apply the contents of the lecture in independent but supervised project work to a concrete medical problem</li> <li>• acquire interface competence between engineering sciences and medicine</li> <li>• learn to present subject-related content clearly and in a manner appropriate to the target group</li> </ul>
7	<b>Prerequisites</b>	None

3	Lehrende	PD Dr. Dennis Toddenroth	

4	<b>Module coordinator</b>	PD Dr. Dennis Toddenroth	
5	<b>Contents</b>	Die Patientenversorgung sowie die medizinische Forschung basieren zunehmend auf wissensintensiven Prozessen. Eine elektronische Unterstützung dieser Prozesse und eine semantische Interoperabilität der beteiligten Informationssysteme erfordert hierbei regelmäßig eine technische Repräsentation der verarbeiteten Patientendaten sowie des angewendeten Wissens in standardisierten Terminologien und Ontologien. Nach Einführung in die Grundprinzipien der medizinischen Fachsprache thematisiert diese Veranstaltung Strukturen und Inhalte medizinisch relevanter Terminologien, die eigene Modellierung medizinischer Ontologien, sowie den Nutzen standardisierter Terminologien für moderne medizinische Forschungsinfrastrukturen sowie für die medizinische Computerlinguistik (Freitextverarbeitung).	
6	<b>Learning objectives and skills</b>	Studierende, die das Modul erfolgreich abgeschlossen haben: <ul style="list-style-type: none"> <li>• erklären Besonderheiten des medizinischen Wissens und seiner Anwendung</li> <li>• erläutern die Grundprinzipien, Strukturen und Inhalte wichtiger medizinischer Terminologien und Ontologien</li> <li>• verwenden Verfahren und geeignete Werkzeuge zur technischen Implementierung eigener Ontologien aus nicht-technischen Wissensrepräsentationen</li> <li>• erklären den Nutzen standardisierter Ontologien für medizinische Forschungsinfrastrukturen sowie für die medizinische Computerlinguistik</li> <li>• wenden Ontologie-basierte Verfahren zur medizinischen Freitextverarbeitung an</li> </ul>

3	Lehrende		

4	<b>Module coordinator</b>	Prof. Dr. Dirk Riehle	
5	<b>Contents</b>	<p>This module teaches advanced methods of data engineering using software engineering practices that support the development and operation of complex data engineering pipelines. Lecture topics include software development workflows using git/GitHub, automated testing, continuous integration and how to successfully open-source the final data science project.</p> <p>Participants plan, implement, and deploy a self-directed data science project based on open data using Python. Additionally, students complete exercises introducing challenges found in realistic open data sources in an open-source, domain-specific language to model data pipelines, called Jayvee.</p> <p>The course language is English. Previous experience in programming (for example from OSS-ADAP or OSS-AMOS) or the willingness to learn alongside the course is required. Programming in Jayvee will be taught during the course.</p>	
6	<b>Learning objectives and skills</b>	<ul style="list-style-type: none"> <li>• Students learn concepts of open data and open-source software engineering</li> <li>• Students learn concepts and tools of data engineering, setting up and operating automated data pipelines</li> <li>• Students learn concepts and tools of automated testing, continuous integration and working with git/GitHub</li> <li>• Students gain experience with data engineering and data science in the context of a development project</li> <li>• Students gain experience dealing with data engineering challenges inherent to open data</li> </ul>	
7	<b>Prerequisites</b>	<ul style="list-style-type: none"> <li>- OSS-ADAP</li> <li>- OSS-AMOS</li> </ul>

4	<b>Module coordinator</b>	Prof. Dr. Anne Koelewijn	
5	<b>Contents</b>	Anatomie des menschlichen Bewegungsapparates  Muskeln, Sehnen, Bänder, Knochen, Knorpel  Gelenkmechanik Kinematik  Bewegungsanalyse und Motion-Capturing-Systeme  Kinetik  Kraft- & Druckmessplatten, Bodenreaktionskräfte  Elektromyographie 3D-Modellierung in der Biomechanik  Segmentierung, 3D-Modelle  Simulation  FEM, MKS	
6	<b>Learning objectives and skills</b>	Nach dem erfolgreichen Absolvieren des Moduls verfügen die Studierenden über die folgenden fachlichen, methodischen und persönlichen Kompetenzen: Die Studierenden verstehen die in der Biomechanik verwendete Technik und angewandte Methoden. Die Studierenden bestimmen die anatomischen Strukturen, die den aktiven bzw. passiven Bewegungsapparat aufbauen und somit Kraftentwicklung und Bewegungen ermöglichen. Die Studierenden sind in der Lage die in der technischen Mechanik erlernten Größen wie Kräfte und Momente auf anatomische Strukturen anzuwenden. Die Studierenden können die Funktion der im Rahmen der Kinematik verwendeten Systeme zum Motion-Capturing beschreiben und gegenüberstellen. Sie sind in der Lage, die in der Kinetik verwendeten Messsysteme wie Kraft- und Druckmessplatten in Aufbau und Funktion zu unterscheiden. Sie können die gemessenen Bodenreaktionskräfte und Kraft-Zeit-Verläufe interpretieren und in Zusammenhang mit Bewegungen und Kraftübertragung setzen. Die Studierenden sind in der Lage ein Vorgehen zur Messung von Muskelaktivitäten bei einer spezifischen Bewegung durch Elektromyographie zu entwerfen. Sie beschreiben die Funktion von EMG-Sensoren, unterschiedliche Filtertechniken, Arten der Ableitung wie auch Einflussfaktoren und erläutern diese.	

		Die Studierenden beschreiben die Vorzüge der 3D-Modellierung im biomechanischen und orthopädischen Umfeld und können die unterschiedlichen Arten der Segmentierung gegenüberstellen. Die Studierenden sind in der Lage, Simulation im Maschinenbau und in der Biomechanik gegenüberzustellen und die Unterschiede zu konkretisieren. Sie beschreiben den grundsätzlichen Aufbau von Finiter-Elemente-Analyse (FEM) und Mehrkörpersimulation (MKS) und begründen die Funktion in biomechanischem Kontext.
7	<b>Prerequisites</b>	<b>Bitte melden Sie sich unter <a href="http://www.vhb.org">www.vhb.org</a> mit dem Studiengang "Gesundheitstechnik" an.</b>
8	<b>Integration in curriculum</b>	no Integration in curriculum available!
9	<b>Module compatibility</b>	Artificial intelligence in biomedical engineering (AIBE) Master of Science Data Science 20212
10	<b>Method of examination</b>	elektronische Prüfung Klausur: 60 Min. (E-Klausur, an der Hochschule abzulegen) *
11	<b>Grading procedure</b>	elektronische Prüfung (100%)
12	<b>Module frequency</b>	Every semester
13	<b>Workload in clock hours</b>	Contact hours: 0 h Independent study: 75 h
14	<b>Module duration</b>	1 semester
15	<b>Teaching and examination language</b>	german
16	<b>Bibliography</b>	Relevante Literatur ist im Online-Kurs zu den jeweiligen Kapiteln angegeben.

1	<b>Module name</b> 47674	<b>Movement Neuroscience: Connections between Brain and Muscles in Humans</b> Movement Neuroscience: Connections between brain and muscles in humans	<b>5 ECTS</b>
2	Courses / lectures	Vorlesung: Movement Neuroscience: Connections between the Brain and Muscles in Humans (4 SWS) (WiSe 2025)	5 ECTS
3	Lehrende	Janina Kloos Yannick Finck Prof. Dr. Alessandro Del Vecchio	

4	<b>Module coordinator</b>	Prof. Dr. Alessandro Del Vecchio	
5	<b>Contents</b>	<p>Module: Principles of Neural control of movement and neuroengineering How the central nervous system controls muscle forces; Neurons, upper and lower motoneurons, Cortical and brainstem function, Interneurons and Motor Units. Neuroengineering applications for studying the neural control of movement; invasive and non-invasive recordings, electrical stimulation of the nervous system.</p> <p>Module: Electrophysiology Generation of an action potential, difference between intracellular and extracellular action potential, sparsity of the action potential in a matrix of electrodes.</p> <p>Module: Generation of EMG signals and analysis Recording electrophysiological data in humans; examples of EMG and EEG recordings.</p> <p>Module: Oscillations in neuronal networks Coherence analysis; Common synaptic input to populations of neurons; Noise in the nervous system; Associations between EEG and EMG signals; Startle responses</p> <p>Module: Simulation of muscle forces from the firing of individual motoneurons Motor unit model, HodgkinHuxley model, Muscle Properties</p> <p>Module: EMG signals in Neural Pathologies Parkinsons and Spinal Cord Injury, Motor unit analysis in neurodegenerative and neurotraumatic diseases.</p> <p>Module: MATLAB / Python practical coursework Extraction of neural information from electrophysiological signals; associations of information between electrophysiological signals and behavioural data; Experiment in humans.</p>	
6	<b>Learning objectives and skills</b>	<p>Students understand motor function at the brain and muscle level. The students describe how these systems are organized and what information can be extracted from the brain and muscles with the use of EMG signals. Moreover, students explore the acquisition, analysis, and interpretation of electrophysiological data with a specific focus on human recordings in health and pathological conditions (e.g., spinal cord injury, stroke, and Parkinsons disease).</p>	
7	<b>Prerequisites</b>	No compulsory prerequisites.	

		<b>Recommended:</b> Basic biology and neurophysiology, Computer programming (Matlab and/or Python), Biosignal processing.

1	<b>Module name</b> 96890	<b>Music Processing - Analysis</b> Music processing - Analysis	<b>2,5 ECTS</b>
2	Courses / lectures	Vorlesung: Music Processing Analysis (2 SWS) (WiSe 2025)	2,5 ECTS
3	Lehrende	Prof. Dr. Meinard Müller	

4	<b>Module coordinator</b>	Prof. Dr. Meinard Müller	
5	<b>Contents</b>	<p>Music signals possess specific acoustic and structural characteristics that are not shared by spoken language or audio signals from other domains. In fact, many music analysis tasks only become feasible by exploiting suitable music-specific assumptions. In this course, we study feature design principles that have been applied to music signals to account for the music-specific aspects. In particular, we discuss various musically expressive feature representations that refer to musical dimensions such as harmony, rhythm, timbre, or melody. Furthermore, we highlight the practical and musical relevance of these feature representations in the context of current music analysis and retrieval tasks. Here, our general goal is to show how the development of music-specific signal processing techniques is of fundamental importance for tackling otherwise infeasible music analysis problems.</p>	
6	<b>Learning objectives and skills</b>	<p>Expertise</p> <p>Understand</p> <ul style="list-style-type: none"> <li>• The students present central tasks in music processing in their own words and outline possible solutions.</li> <li>• The students understand the properties of different forms of representation of music.</li> </ul> <p>Apply</p> <ul style="list-style-type: none"> <li>• The students apply basic algorithms for the analysis and comparison of music signals.</li> <li>• Students can predict how different musical properties will affect the signal analysis.</li> </ul> <p>Analyze</p> <ul style="list-style-type: none"> <li>• The students observe and discuss the meaning and impact of parameters in music analysis.</li> <li>• The students compare different methods of analyzing periodicities.</li> </ul> <p>Evaluate</p> <ul style="list-style-type: none"> <li>• The students question assumptions that are often implicitly made when using analytical methods.</li> <li>• Students estimate when methods might work when analyzing specific music signals and when they typically fail.</li> </ul> <p>Learning and methodological skills</p> <ul style="list-style-type: none"> <li>• The students prepare for the lecture using selected literature and Jupyter notebooks.</li> <li>• The students question existing approaches regarding their applicability in practice.</li> <li>• The students pay attention to efficiency issues in the algorithms discussed.</li> </ul>	

#### Self-competence

- The students question their understanding of what they have learned using exercises.
- The students formulate questions and ask them to the lecturer and the audience in the lecture.

#### Social skills

- The students independently organize learning groups in which the subject is discussed and deepened.
- The students simulate oral exams with their fellow students.

#### Fachkompetenz

##### Verstehen

- Die Studierenden stellen zentrale Aufgabenstellungen der Musikverarbeitung in eigenen Worten dar und skizzieren Lösungsansätze.
- Die Studierenden verstehen die Eigenschaften von unterschiedlichen Darstellungsformen von Musik.

##### Anwenden

- Die Studierenden wenden grundlegende Algorithmen zur Analyse und zum Vergleich von Musiksignalen an.
- Die Studierenden können voraussagen, wie sich unterschiedliche musikalische Eigenschaften bei der Signalanalyse auswirken.

##### Analysieren

- Die Studierenden beobachten und diskutieren die Bedeutung und Auswirkung von Parametern bei der Musikanalyse.
- Die Studierenden stellen unterschiedliche Verfahren bei der Analyse von Periodizitäten gegenüber.

##### Evaluieren (Beurteilen)

- Die Studierenden hinterfragen Annahmen, die implizit bei der Verwendung von Analysemethoden gemacht werden.
- Die Studierenden schätzen ein, wann Methoden bei der Analyse von gewissen Musiksignalen funktionieren könnten und wann sie typischerweise versagen.

##### Lern- bzw. Methodenkompetenz

- Die Studierenden bereiten sich auf die Vorlesung anhand ausgewählter Literatur vor.
- Die Studierenden hinterfragen bestehende Ansätze hinsichtlich ihrer Anwendbarkeit in der Praxis.
- Die Studierenden beachten Fragen der Effizienz bei den diskutierten Algorithmen.

##### Selbstkompetenz

- Die Studierenden hinterfragen ihr Verständnis von dem Gelernten anhand von Übungsaufgaben.
- Die Studierenden formulieren Fragen und stellen diese in der Vorlesung an den Dozenten und die Zuhörerschaft.

##### Sozialkompetenz

- Die Studierenden organisieren selbständig Lerngruppen, in denen der Stoff diskutiert und vertieft wird.

		<ul style="list-style-type: none"> <li>Die Studierenden simulieren mit ihren Kommilitonen mündliche Prüfungen.</li> </ul>
7	<b>Prerequisites</b>	In this course, we discuss a number of current research problems in music processing or music information retrieval (MIR) covering aspects from information science and digital signal processing. We provide the necessary background information and give numerous motivating examples so that no specialized knowledge is required. However, the students should have a solid mathematical background. The lecture is accompanied by readings from textbooks or the research literature. Furthermore, the students are required to experiment with the presented algorithms using Python.

3	Lehrende	PD Dr. Cornelia Schneider	

4	<b>Module coordinator</b>	PD Dr. Cornelia Schneider	
5	<b>Contents</b>	<p>In this lecture, we will study deep neural networks. We will focus on a functional analytical and well-founded framework which allows to make rigorous statements which do provide explanations and intuition as to why certain neural network architectures are preferable over others. For example, we will see explanations of why deep neural networks are, in some sense, superior to shallow neural networks or why the neural network architecture can efficiently reproduce high dimensional functions when most classical approximation schemes cannot. The lecture covers the basics of the following topics:</p> <ul style="list-style-type: none"> <li>• Classical approximation results by neural networks</li> <li>• ReLU networks</li> <li>• The role of depth</li> <li>• High dimensional approximation</li> <li>• Complexity of sets of networks</li> <li>• Spaces of realisations of neural networks</li> </ul> <p>The presentation of the material is in lecture form. The essential terms and techniques are acquired through exercises and homework.</p>	
6	<b>Learning objectives and skills</b>	Students gain a mathematical understanding of the structure and principles of neural networks.	
7	<b>Prerequisites</b>	Linear Algebra I and Analysis I+II or Mathematics for Data Science I +II or comparable; Functional Analysis or Higher Analysis are strongly recommended.	
8	<b>Integration in curriculum</b>	no Integration in curriculum available!

1	<b>Module name</b> 562819	<b>Projektseminar Optimierung (Master)</b> Optimisation project with computer exercises (Master)	<b>5 ECTS</b>
2	Courses / lectures	Zu diesem Modul sind in diesem Semester keine Lehrveranstaltungen oder Lehrveranstaltungsgruppen hinterlegt!	
3	Lehrende	No lecturers available since there are no courses / lectures for this module for this semester!	

4	<b>Module coordinator</b>	Prof. Dr. Frauke Liers-Bergmann	
5	<b>Contents</b>	Anhand einer konkreten Anwendung sollen die im Studium bis dahin erworbenen Kenntnisse zu mathematischen Optimierungsmodellen und -methoden umgesetzt werden. Der Inhalt ergibt sich aus einer aktuellen Problemstellung häufig in enger Zusammenarbeit mit einem Industriepartner. Als Beispiele seien genannt die Wasserversorgung einer Stadt, die Gestaltung einer energieeffizienten Fassade eines Bürogebäudes oder das Baustellenmanagement im Schienenverkehr. Das Seminar wird als Projekt durchgeführt. Das heißt, Studierende werden in Teams von bis zu 4 Personen, die in der ersten Woche ausgehändigte Aufgabenstellung im Laufe des Semesters bearbeiten. Am Ende des Semesters werden die Teams ihre Lösungsvorschläge vorstellen und vergleichen.	
6	<b>Learning objectives and skills</b>	Die Studierenden <ul style="list-style-type: none"> <li>• führen selbständig in Teams ein größeres Projekt durch, in dem sie eine reale Fragestellung modellieren, Lösungsverfahren entwickeln und implementieren und ihre Ergebnisse auf die Praxis anwenden;</li> <li>• präsentieren die Ergebnisse der Projektarbeit und diskutieren diese;</li> <li>• tauschen sich untereinander und mit den Dozenten über Informationen, Ideen, Probleme und Lösungen auf wissenschaftlichem Niveau aus.</li> </ul>	
7	<b>Prerequisites</b>	empfohlen: <ul style="list-style-type: none"> <li>• Lineare Algebra</li> <li>• Lineare und Kombinatorische Optimierung</li> </ul>	
8	<b>Integration in curriculum</b>	semester: 1;2

1	<b>Module name</b> 65923	<b>Optimization in industry and economy</b>	<b>5 ECTS</b>
2	Courses / lectures	Vorlesung: Optimization in Industry and Economy (2 SWS) (WiSe 2025)	5 ECTS
3	Lehrende	Sebastian Denzler Prof. Dr. Frauke Liers-Bergmann	

4	<b>Module coordinator</b>	Prof. Dr. Frauke Liers-Bergmann	
5	<b>Contents</b>	<p>This course focuses on modeling and solving real-world optimization problems occurring in industry and economics. Advantages and disadvantages of different modeling techniques will be outlined. In order to achieve efficient solution approaches, different reformulations and their numerical results will be discussed. Students will learn how to present optimization results properly as well as how to interpret and evaluate these results for practical applications. The latter may include but is not limited to the optimization of transport networks (gas, water, energy), air traffic management and mathematical modeling/optimization of market mechanisms in the energy sector.</p>	
6	<b>Learning objectives and skills</b>	<p>Students</p> <ul style="list-style-type: none"> <li>• model complex real-world optimization problems with respect to efficient</li> <li>• solvability,</li> <li>• classify the models and use appropriate solution strategies,</li> <li>• evaluate the achieved computational results.</li> </ul>	
7	<b>Prerequisites</b>	Recommended: Modul LKOpt: Linear and combinatorial optimization	
8	<b>Integration in curriculum</b>	semester: 1

3	Lehrende	Dr.-Ing. Peter Schwab	

4	<b>Module coordinator</b>	Prof. Dr.-Ing. Richard Lenz
5	<b>Contents</b>	<p>In today's fast-paced business environment, organizations must rapidly adapt their processes to remain competitive. Traditional IT development approaches often create a gap between business strategy and technical implementation, leading to inflexible systems that cannot keep pace with change. This course addresses this challenge by introducing a comprehensive approach to developing process-driven applications (PDAs)—business systems where processes are the primary driver, not an afterthought.</p> <p><b>Foundation:</b></p> <ul style="list-style-type: none"> <li>• Business Process Management principles and lifecycle</li> <li>• End-to-end process thinking and process orientation</li> <li>• The relationship between business strategy, processes, and IT systems</li> </ul> <p><b>Modeling &amp; Specification:</b></p> <ul style="list-style-type: none"> <li>• BPMN 2.0 notation from basics to advanced concepts</li> <li>• BPMN Method &amp; Style best practices for creating high-quality process models</li> <li>• Specifying process-driven applications with complete documentation</li> <li>• Separating business logic into manageable business rules (BRMS)</li> </ul> <p><b>Architecture &amp; Implementation:</b></p> <ul style="list-style-type: none"> <li>• Layered architecture for process-driven applications</li> <li>• Independence of business processes from backend system interfaces</li> <li>• Enterprise integration patterns for connecting distributed systems</li> <li>• Evolution of process models from business to technical implementation</li> </ul> <p><b>Key Differentiator:</b></p>

		<p>Unlike traditional courses that treat BPMN merely as a documentation tool, this course teaches you to use BPMN as a consistent language throughout the entire application lifecycle—from business analysis through technical implementation. You'll learn to build systems where business processes can be modified without requiring extensive programming changes.</p> <p><b>Target Audience:</b></p> <p>Students aiming for careers in business analysis, enterprise architecture, process consulting, or IT development in process-intensive industries.</p>
6	<p><b>Learning objectives and skills</b></p>	<p>Students will...</p> <ul style="list-style-type: none"> <li>• Define Business Process Management (BPM) and explain its key issues.</li> <li>• Illustrate the BPM lifecycle and BPM framework.</li> <li>• Evaluate the importance of process automation in BPM.</li> <li>• Evaluate the importance of process engines in process automation.</li> <li>• Explain all notational elements of the BPMN specification.</li> <li>• Describe the process flow in given BPMN diagrams and understand the difference between orchestration and collaboration.</li> <li>• Demonstrate the conditions for using the various BPMN activities, events, and gateways.</li> <li>• Define the basic components of a process-driven application.</li> <li>• Model, implement, and evaluate all types of processes within a process-driven application using the BPMN standard.</li> <li>• Design transactions and error and timeout handling in BPMN.</li> <li>• Evaluate different BPMN modeling variants for the same process.</li> <li>• Recognize the differences between BPMN and other modeling notations presented in the module and evaluate their advantages and disadvantages compared to each other.</li> <li>• Apply the "Separation of Concerns" principle correctly and know all the development steps that lead to an executable process-driven application.</li> <li>• Recognize and differentiate important style rules (best practices) in BPMN modeling that go beyond the BPMN specification.</li> <li>• Illustrate the different BPMN levels for process modeling and their granularity depending on the consumer of the process model.</li> <li>• Identify the use case for process-driven applications.</li> <li>• Understand the complexity and challenges of process-driven applications.</li> <li>• Understand the need for a sustainable methodology and architecture in the design of process-driven applications to address the challenges that arise.</li> </ul>

		<ul style="list-style-type: none"> <li>• Validate the (layered) architecture and interfaces of a process-driven application and its business domain.</li> <li>• Understand the heterogeneous IT landscape in companies that has evolved over several years.</li> <li>• Differentiate between a 2-layer and a 3-layer architecture and explain their advantages and disadvantages.</li> <li>• Evaluate the importance of SOA, integration, patterns, eventing and controlling in the context of process-driven applications.</li> <li>• Decompose functionality into different layers and implement them in a way that preserves the flexibility required by the business.</li> <li>• Demonstrate and evaluate the functionality of an Enterprise Service Bus (ESB) in the context of process-driven applications.</li> <li>• Specify and implement process-driven applications.</li> <li>• Explain the basic functionality of rules engines.</li> <li>• Increase the flexibility of process-driven applications by using business rule management systems (BRMS) and analysis applications.</li> <li>• Work cooperatively and independently in small groups.</li> </ul>
7	<b>Prerequisites</b>	<p>Recommended skills:</p> <ul style="list-style-type: none"> <li>• Knowledge of Petri nets, in particular with regard to the flow of tokens.</li> <li>• An understanding of microservices.</li> <li>• Knowledge of basic SOA (Service-Oriented Architecture) technologies and concepts, including XML, Web Services, SOAP, UDDI registration, repositories, WSDL, e.g. by attending the eBusiness Technologies (EBT) course.</li> </ul>

3	Lehrende		

4	<b>Module coordinator</b>	Prof. Dr. Björn Eskofier An Nguyen Dr. Dario Zanca
5	<b>Contents</b>	<p>At the Machine Learning and Data Analytics Lab we offer project topics that are related to our current research in the fields of Machine Learning, Human Computer Interaction, Modeling and Simulation and Wearable Computing. Other than a course with fixed topic, project topics are defined individually.</p> <p>The 10 ECTS project addresses students of computer science and medical engineering. However, most projects can also be offered as 5 ECTS medical engineering internship/praktikum.</p> <p>There will be a kick-off meeting the first Thursday 16:15-18:00 of each semester where topics in the field of machine learning and data analytics will be presented. Most topics will be related to the diverse research fields of the Machine Learning and Data Analytics Lab. Students also have the possibility to discuss their own project ideas with the supervisors. The distribution of topics will be based on prerequisites and first come, first serve in terms of time of registration until all topics are distributed. Students will have to contact the corresponding supervisor for the topic of interest.</p> <p>Additional topics are also presented on our website.</p>
6	<b>Learning objectives and skills</b>	<p>The students</p> <ul style="list-style-type: none"> <li>• work on a machine learning algorithm and implement it</li> <li>• work on complex software systems and expand them</li> <li>• learn to independently develop and implement proposed solutions</li> <li>• document the software they have written</li> </ul>
7	<b>Prerequisites</b>	None
8	<b>Integration in curriculum</b>	no Integration in curriculum available!
9	<b>Module compatibility</b>	<p>Artificial intelligence in biomedical engineering (AIBE) Master of Science Data Science 20212</p> <p>Studienrichtung Machine Learning / Artificial Intelligence Master of Science Data Science 20212</p> <p>No prerequisites for this course.</p>
10	<b>Method of examination</b>	<p>Portfolio</p> <p>The evaluation for projects includes a code repository with the implementation of the work (including proper code documentation), a 15-minute presentation, and a term paper of approximately 10 pages.</p> <p>*</p>
11	<b>Grading procedure</b>	Portfolio (100%)

		The overall grade consists of these parts: <ul style="list-style-type: none"> <li>• 50% graded implementation</li> <li>• 25% graded presentation</li> <li>• 25% graded documentation/report</li> </ul>
12	<b>Module frequency</b>	Every semester

3	Lehrende		

4	<b>Module coordinator</b>	Prof. Dr. Michael Hartmann	
5	<b>Contents</b>	<p>*Contents:* The course provides an introduction to quantum computing. The development of quantum hardware has progressed substantially in recent years and has now reached a level of maturity where first industrial applications are being explored. This course will introduce the fundamental ingredients of quantum algorithms, quantum bits and quantum gates, the most important hardware implementations and in particular algorithms that can run on near term hardware implementations of so called Noisy Intermediate Scale Quantum (NISQ) devices. The course will be completed with introductions to the basic concepts of error correction, which is needed in the next stage of development to fully exploit the potential of this emerging computing technology. Prerequisites: the main concepts of quantum theory, including quantum states, the Schrödinger equation, unitary evolution and measurements.</p>	
6	<b>Learning objectives and skills</b>	<p>*Learning goals and competences:*</p> <p>Students</p> <ul style="list-style-type: none"> <li>• understand the origin of the computation potential of quantum computers</li> <li>• understand key quantum algorithms, such as Deutsch algorithm, quantum phase estimation and Shor's algorithm</li> <li>• understand the working principle of quantum error correction and key error correcting codes</li> <li>• code quantum algorithms in a modern quantum programming language</li> <li>• are able to apply the learned methodology to example problems</li> </ul>	
7	<b>Prerequisites</b>	None	
8	<b>Integration in curriculum</b>	no Integration in curriculum available!	
9	<b>Module compatibility</b>	Physics Master of Science Data Science 20212	
10	<b>Method of examination</b>	Klausur (90 Minuten)

1	<b>Module name</b> 47708	<b>Robotics in Surgery and Diagnostics</b> Robotics in surgery and diagnostics	<b>5 ECTS</b>
2	Courses / lectures	Vorlesung mit Übung: Robotics in Surgery and Diagnostics (4 SWS)	5 ECTS
3	Lehrende	Prof. Dr. Franziska Mathis-Ullrich Steffen Peikert	

4	<b>Module coordinator</b>	Prof. Dr. Franziska Mathis-Ullrich	
5	<b>Contents</b>	<p>To provide motivation, the various scenarios of robot use in the surgical environment are explained and classified using examples. The fundamentals of robotics are addressed, including different kinematic forms, and key parameters such as degrees of freedom, kinematic chains, workspace, and payload are introduced. This includes the presentation of medically used robots in different size scales, ranging from micro- and nanorobotics to minimally invasive continuum robotics and larger systems for robot-assisted surgery.</p> <p>Next, the different modules of the process chain for robot-assisted surgery are presented. It begins with medical imaging and the various tomographic techniques, explaining their physical principles and their diagnostic information about anatomy and pathology. Medical image processing, with a focus on segmentation, follows. This leads to the geometric 3D reconstruction of anatomical structures, forming the basis for an attributed patient model. The methods for registering preprocessed measurement data from different tomographic modalities are described. The various approaches for modeling tissue parameters complement the discussions, forming a complete patient model. The applications of the patient model in visualization and surgical planning are the next topic. The intraoperative part of the process chain includes registration, navigation, augmented reality, and surgical robotic systems. These are explained with fundamentals and application examples. Key points here include techniques for robot-assisted tissue cutting and approaches to micro- and nanosurgery. Finally, applications of machine learning in medical robotics are discussed. The lecture concludes with a brief discourse on specific safety issues and the legal aspects of medical products.</p>	
6	<b>Learning objectives and skills</b>	<p>Students</p> <ul style="list-style-type: none"> <li>• have a good overview of existing surgical and medical robotic systems in research and practical applications.</li> <li>• understand the specific requirements of surgery for automation with robots.</li> <li>• can recognize basic kinematics and their relevance to medical requirements and applications.</li> <li>• are familiar with basic techniques for processing and using image data from different modalities and can apply them.</li> <li>• can design the complete workflow for a robot-assisted procedure.</li> </ul>	

7	<b>Prerequisites</b>	Recommended by the lecturer(s): Knowledge on robotics design, robot kinematics
8	<b>Integration in curriculum</b>	semester: 1

3	Lehrende	Dr. Jana Dahlmanns	

4	<b>Module coordinator</b>	Dr. Jana Dahlmanns apl. Prof. Dr. Clemens Forster
5	<b>Contents</b>	<p>Es werden verschiedene klinisch orientierte Methoden vorgestellt, mit denen verschiedene Vitalparameter am Menschen erfasst werden. Dazu werden zunächst die theoretischen Grundlagen im Seminar mittels Referaten vorgestellt. Anschließend werden im Praktikum entsprechende Versuche und Messungen durchgeführt. Zu jedem Praktikum muss eine Ausarbeitung (Praktikumsbericht) erstellt werden, in der Ergebnisse und Beobachtungen mit gängigen Methoden der Signalverarbeitung weiter analysiert und diskutiert werden.</p> <p>In this module, various clinically oriented methods are presented with which different vital parameters are recorded in humans. To this end, the theoretical principles are first presented in the seminar by means of lectures. Subsequently, corresponding experiments and measurements are carried out in the practical course. A report must be written for each practical course in which the results and observations are further analyzed and discussed using standard signal processing methods.</p>
6	<b>Learning objectives and skills</b>	<p>Inhalt des Seminars: Vorstellung klinisch relevanter Biosignale, Verfahren zu deren Ableitung und Weiterverarbeitung. In 7 Praktikumsnachmittagen werden Versuche und Messungen an den Teilnehmern durchgeführt und die abgeleiteten Signale sollen anschließend mit verschiedenen Verfahren nachbearbeitet werden. Folgende Versuche sind vorgesehen:</p> <ul style="list-style-type: none"> <li>• Ableitung des EKG. Auswertung dazu: Einfluss von Abtastfrequenz und Filtereinstellung, Detektion und Eliminierung von Störungen, QRS-Detektion und Analyse von Spätpotentialen.</li> <li>• Nerv- und Muskelsignale: Ableitung von EMG und ENG zur Bestimmung der Nervenleitgeschwindigkeit. Prinzip der elektrischen Stimulation von Nerv und Muskel.</li> <li>• Spirometrie: Atemvolumina und deren Messung mittels Spirometrie. Messung des Atemwegswiderstandes und dessen Abhängigkeit von der Atemstellung. Automatische Bestimmung der gesuchten Größen.</li> <li>• Kreislauf: Messung des Blutdrucks nach Riva-Rocci, mittels automatischen Geräten und kontinuierlich. Analyse der Blutdruckregelung bei Belastung (Orthostase, körperliche Anstrengung). Analyse der Herzfrequenz in Abhängigkeit von der Atmung. Herzratenvariabilität.</li> </ul>

		<ul style="list-style-type: none"> <li>• EEG: Ableitung eines EEG. Klassifikation hinsichtlich der Frequenzanteile. Ableitung und Auswertung ereigniskorrelierter Potentiale im EEG.</li> <li>• Otoakustische Emissionen (OAE): Auslösen und Registrieren von OAE bei verschiedenen Lautstärken. Analyse von OAE.</li> <li>• Demonstration verschiedener Geräte und Verfahren zur Untersuchung am Patienten: Sensorische und akustische Schwellenmessungen, Gleichgewichtsregulation, Untersuchung der Farbempfindung, Gesichtsfeldmessung (Perimetrie).</li> </ul> <p>Content of the seminar: Presentation of clinically relevant biosignals, methods for their derivation and further processing. In 7 practical sessions, experiments and measurements will be carried out on the participants and the derived signals will then be post-processed using various methods. The following experiments will be carried out:</p> <ul style="list-style-type: none"> <li>• Recording of the ECG. Evaluation of this: Influence of sampling frequency and filter setting, detection and elimination of interference, QRS detection and analysis of late potentials.</li> <li>• Nerve and muscle signals: recording of EMG and ENG to determine the nerve conduction velocity. Principle of electrical stimulation of nerve and muscle.</li> <li>• Spirometry: respiratory volumes and their measurement using spirometry. Measurement of airway resistance and its dependence on breathing position. Automatic determination of the required parameters.</li> <li>• Circulation: Measurement of blood pressure according to Riva-Rocci, using automatic devices and continuously. Analysis of blood pressure regulation during exercise (orthostasis, physical exertion). Analysis of heart rate as a function of breathing. Heart rate variability.</li> <li>• EEG: recording of an EEG. Classification with regard to frequency components. Recording and evaluation of event-related potentials in the EEG.</li> <li>• Otoacoustic emissions (OAE): triggering and recording of OAE at different volumes. Analysis of OAEs.</li> <li>• Demonstration of various devices and procedures for examination on patients: sensory and acoustic threshold measurements, balance regulation, examination of color perception, visual field measurement (perimetry).</li> </ul>

1	<b>Module name</b> 47586	<b>Seminar Fantastic Datasets and where to find them</b> Seminar: Fantastic datasets and where to find them	<b>5 ECTS</b>
2	Courses / lectures	Hauptseminar: Fantastic datasets and where to find them (2 SWS)  Students are required to take part in the <i>in-person</i> meetings. Significant time is dedicated to self-paced working on the OER.	5 ECTS
3	Lehrende	Prof. Dr. Andreas Kist Luisa Neubig René Groh	

4	<b>Module coordinator</b>	Prof. Dr. Andreas Kist	
5	<b>Contents</b>	<p>Datasets are crucial to train modern artificial intelligence algorithms. In this module, students will be first faced with the theoretical background of datasets, how datasets are created and disseminated, as well as comply to the FAIR principles. We will cover dataset repositories and data types. In the first three weeks, students will create their own set of data and metadata and will experience the design and creation process of a dataset.</p> <p>In the second block of the module, students are assigned to a given dataset from a pre-selection of datasets important in the field of machine learning and artificial intelligence. The students' task is to create an <i>open educational resource (OER)</i>, similar to a YouTube video, about their assigned dataset explaining the back story of the dataset, as well as its usage in a contemporary context. The generation of the <b>OER</b> will be self-paced with the option to work on the <b>OER</b> during the normal seminar hours.</p> <p>In the third block, students will be assigned to two other dataset <b>OERs</b> of their peer group and will give constructive feedback. The constructive feedback and the <b>OERs</b> will be discussed in the full group. Finally, the students will incorporate the feedback to their <b>OERs</b> and publish them openly on a dedicated seminar YouTube channel.</p>	
6	<b>Learning objectives and skills</b>	<p><b>Subject competence</b> Students acquire broad knowledge of (biomedical) datasets and how they are created (Knowledge). Through the course, students will be able to reproduce examples of different dataset modalities and describe advantages and disadvantages of datasets (Understanding). Through the course, students will be able to classify and grade the quality of a dataset, and explain the limitations of a given dataset (Apply and Evaluate/Judge). Students will be further able to characterize data sets independently (Analyze). Students gain a comprehensive insight into which criteria are important in the construction of new data sets by creating their own one (Create).</p> <p><b>Learning or methodological competence and self-competence</b></p>	

		Students learn to present a data set in a structured and coherent way through the creation of an open educational resource (OER) video. They also learn how to record, edit, compile and disseminate content. Students are given the opportunity to learn how to communicate effectively using their own words and give constructive feedback to others.
7	<b>Prerequisites</b>	We <b>strongly recommend</b> previous knowledge and ideally hands-on experience in Artificial Intelligence and/or Deep Learning to understand the implications discussed in the seminar.
8	<b>Integration in curriculum</b>	semester: 3
9	<b>Module compatibility</b>	Technische Schlüsselqualifikationen Master of Science Data Science 20212
10	<b>Method of examination</b>	Seminarleistung Successful generation of an OER (>= 10 min Video) based on a developed storyboard. *
11	<b>Grading procedure</b>	Seminarleistung (100%) OER (100%). The grade will be determined by evaluating the video content (storyboard) and the production quality. The exact metrics will be communicated at the beginning of the seminar.

1	<b>Module name</b> 65896	<b>Seminar RMA</b>	<b>5 ECTS</b>
2	Courses / lectures	Seminar: Seminar: Research in Movement Analysis - Benchmarking Pose Estimation Models (2 SWS)	5 ECTS
3	Lehrende	Markus Gambietz	

4	<b>Module coordinator</b>	Prof. Dr. Anne Koelewijn
5	<b>Contents</b>	<p>The goal of this module is for students to learn and apply how to perform research in movement analysis. Teams of 3–4 students will select a research question focused on validation studies of computer vision–based movement analysis/pose estimation models, or develop their own validation-oriented research idea within this scope. Teams will record and process optical motion capture data in a proof-of-concept study, which will serve as ground truth for validating computer vision model outputs.</p> <p>Students will acquire in-depth understanding by implementing core movement analysis algorithms, namely forward kinematics, scaling, inverse kinematics, and inverse dynamics, in python from scratch together with their teammates. In three assignments, each student will need to demonstrate the functionality and understanding of the implementation, which is then used for processing the recorded movement data. Next, teams will process their data and solve the research tasks. Each student will write a 3-page report and present their findings.</p> <p>This module will start with introductory sessions, which will contain introductions to the measurement, assignments and later demonstration of the assignments. In these sessions, students select research questions and form groups to record data in a single measurement session. Then, students receive help in several Q&amp;A sessions to ensure successful data analysis and report writing. Presentations will occur in the final sessions. Grade will be 50% report, 50% presentation. All assignments must be passed.</p>
6	<b>Learning objectives and skills</b>	<p>Understanding: Students...</p> <ul style="list-style-type: none"> <li>• can explain how to conduct movement analysis experiments</li> <li>• can discuss state of the art movement analysis processing techniques</li> <li>• can explain core movement analysis algorithms in depth</li> <li>• can explain experimental design and limitations in biomechanics</li> <li>• can explain variable types and time series in movement analysis</li> </ul> <p>Application: Students...</p> <ul style="list-style-type: none"> <li>• can record and analyse optimal motion capture data</li> <li>• are able to write an academic report about a research project</li> </ul> <p>Evaluate: Students...</p> <ul style="list-style-type: none"> <li>• are able to interpret movement data</li> <li>• can critically assess research outcomes</li> </ul>

		<p>Social skills: Students...</p> <ul style="list-style-type: none"> <li>• can cooperate and carry out group work responsibly</li> </ul> <p>are able to give a target-group specific presentation of complex topics</p>
7	<b>Prerequisites</b>	<p>1) compulsory prerequisites: None</p> <p>2) recommended prerequisites: Gait analysis and simulation (GAS)</p>
8	<b>Integration in curriculum</b>	semester: 1
9	<b>Module compatibility</b>	<p>Artificial intelligence in biomedical engineering (AIBE) Master of Science Data Science 20212</p> <ul style="list-style-type: none"> <li>• MSc Medizintechnik</li> <li>• MSc AI</li> <li>• MSc Data Science</li> </ul> <p>The seminar can be taken from the 1st master's semester onwards. 5th or 6th semester bachelor students can join on an exceptional basis.</p>
10	<b>Method of examination</b>	<p>Seminarleistung</p> <p>Students must pass all three assignments, where they need to demonstrate functionality and understanding of their implementations. Each student will give a presentation including a Q&amp;A. The presentation will be 12 minutes (8+4).</p> <p>Each student will write a report (3 pages, double-column format).</p> <p>*</p>
11	<b>Grading procedure</b>	<p>Seminarleistung (100%)</p> <p>The grading will be based on the % score that is achieved in the presentation and the written report. The % score of the presentation and the written report both count 50%. E.g., a student who scores 90% on the written report and 81% on the presentation will receive a final score of 86%, which equals the grade of 1.7. A student who scores 20% and 70% will receive a final score of 45%, which equals the grade of 5.0.</p>

3	Lehrende	Prof. Dr.-Ing. Tobias Günther Prof. Dr. Tim Weyrich	

4	<b>Module coordinator</b>	Prof. Dr.-Ing. Tobias Günther Prof. Dr. Tim Weyrich	
5	<b>Contents</b>	<p>This seminar covers advanced topics in visual computing, including both seminal research papers, as well as the latest research results. The seminar provides an opportunity to obtain a comprehensive overview of research questions in visual computing, as well as allows students to dive deeper into a chosen topic. Each student presents one scientific publication and explains its content to fellow students taking the course. Thereby, students practice their argumentation and presentation skills. For each paper, a supervisor is provided, who answers questions and gives pointers on the presentation slide design. The seminar is concluded with a short written report. The main topics include:</p> <ul style="list-style-type: none"> <li>• human performance capture (faces, eyes, speech),</li> <li>• animation (motion controllers, speech synthesis, shape modelling)</li> <li>• fabrication (caustic design, robot design),</li> <li>• appearance modelling (subsurface scattering),</li> <li>• Monte Carlo rendering (importance sampling, participating media),</li> <li>• differentiable rendering (neural rendering, inverse rendering),</li> <li>• denoising (non-local means and deep learning),</li> <li>• physics simulation (fluid simulation)</li> </ul> <p>The seminar contains the paper presentations by the students and introductory lectures on scientific dissemination.</p>	
6	<b>Learning objectives and skills</b>	<p>Students learn to:</p> <ul style="list-style-type: none"> <li>• present current research topics in visual computing</li> <li>• perform a thorough literature review</li> <li>• cite scientific literature correctly</li> <li>• comprehend scientific texts</li> <li>• improve their presentation and argumentation skills</li> <li>• practice scientific writing</li> </ul>

10	<b>Method of examination</b>	<p>Seminarleistung</p> <p><b>Grading</b></p> <p>Each student presents a paper, which is a selected from a set of papers in the first session. The presentation duration is 30 minutes with an</p>	

		<p>additional 10 minutes for questions. Presentations begin approximately 3-4 weeks after the start of the semester. The presentation contributes to 70% of the final grade. A written report with a length of 5-6 pages constitutes the remaining 30%, for which a LaTeX template is provided. The presentation time slots are grouped by topic and cannot be chosen. An important aspect of the grading is the subsequent discussion. To spur discussions, students are encouraged to write a brief abstract (approx. 250 words) about each paper, which can be uploaded on StudOn before the presentation. The voluntary abstracts are graded and if more than 80% of the available points are reached the final grade is improved by 0.3 or 0.4 grade points, respectively.</p> <p>*</p>

5	<b>Contents</b>	<p>Please note: This module is held 100% online via the Virtual University of Bavaria ([1]www.vhb.org) under the title "Fundamentals of Speech Processing". Please register for the exam via the VHB website as well as via Campo.</p> <p>Nach Behandlung der grundlegenden Mechanismen menschlicher Spracherzeugung und Sprachwahrnehmung gibt die Vorlesung eine detaillierte Einführung in (vornehmlich) statistisch orientierte Methoden der maschinellen Erkennung gesprochener Sprache. Schwerpunktthemen sind Merkmalgewinnung, Vektorquantisierung, akustische Sprachmodellierung mit Hilfe von Markovmodellen, linguistische Sprachmodellierung mit Hilfe stochastischer Grammatiken, prosodische Information sowie Suchalgorithmen zur Beschleunigung des Dekodiervorgangs. After focussing on of the basic mechanisms of human speech generation and speech perception the lecture gives a detailed introduction to (mainly) statistically oriented methods of automatic recognition of spoken language. Main topics are feature extraction, vector quantization, acoustic speech modeling with the help of Markov models, linguistic speech modeling with the help of stochastic grammars, prosodic information as well as search algorithms to speed up the decoding process.</p>
6	<b>Learning objectives and skills</b>	<p>Die Studierenden</p> <ul style="list-style-type: none"> <li>• verstehen die Grundlagen der menschlichen Sprachproduktion und die akustischen Eigenschaften unterschiedlicher Phonemklassen</li> <li>• erklären den allgemeinen Aufbau eines Mustererkennungssystems</li> <li>• verstehen Abtastung, das Abtasttheorem und Quantisierung in Bezug auf Sprachsignale</li> <li>• verstehen die Fourier-Transformation und mathematische Modelle der Sprachproduktion</li> <li>• verstehen harte und weiche Vektorquantisierungsmethoden</li> <li>• verstehen unüberwachtes Lernen (EM-Algorithmus)</li> <li>• verstehen Hidden Markov-Modelle (HMMs)</li> <li>• erklären stochastische Sprachmodelle</li> </ul> <p>The students</p> <ul style="list-style-type: none"> <li>• understand the principles of human speech production and acoustic properties of the different phoneme classes</li> <li>• explain the general pipeline of a pattern recognition system</li> </ul>

1	<b>Module name</b> 47612	<b>Tracking Olympiad</b>	<b>5 ECTS</b>
2	Courses / lectures	Hauptseminar: Tracking Olympiad (4 SWS) Attendance is required throughout the seminar.	5 ECTS
3	Lehrende	Prof. Dr. Andreas Kist Luisa Neubig René Groh	

4	<b>Module coordinator</b>	Prof. Dr. Andreas Kist
5	<b>Contents</b>	<p>Computer vision is one of the major tasks and applications of artificial intelligence (AI). Gaining hands-on experience is therefore of great importance for future AI developers. In the Tracking Olympiad, students utilize latest object detection and tracking algorithms to track a freely, randomly moving object ("HexBug) in a given arena. The students will be provided with a set of videos that contain the ground-truth positional information and implement an own tracking technique.</p> <p>At the beginning of the seminar, all students are divided into teams which compete with each other to find the best strategy for tracking the HexBug. The teams tracking prediction needs to be an algorithm that incorporates each students tracking algorithm. The teams score will be evaluated by applying the teams tracking algorithm to previously unseen/withheld videos. Further, the team acquires and annotates own data to improve their tracking algorithms. Each team selects videos that are tested by the other teams algorithm and are subsequently ranked similar to a soccer league table. The aim of this seminar is to enable each student developing an own AI-powered tracking algorithm that is an integral part of a team solution.</p> <p>The Tracking Olympiad consists of two sessions in a given week, one with a journal club explaining AI tracking concepts by students and one for open Q&amp;A depending on the individual students progress with voluntary developmental time.</p>
6	<b>Learning objectives and skills</b>	<p>Students</p> <ul style="list-style-type: none"> <li>• will be able to create own code</li> <li>• are able to create acquire and annotate own data</li> <li>• can document their code</li> <li>• will strengthen their team skills</li> <li>• can develop tracking algorithms</li> <li>• will learn about latest AI methods</li> <li>• can present complex topics</li> <li>• can extract relevant information from journal papers</li> </ul>
7	<b>Prerequisites</b>	None

2	Courses / lectures	Vorlesung: Transformationen in der Signalverarbeitung (2 SWS)	2,5 ECTS
3	Lehrende	PD Dr.-Ing. Jürgen Seiler	

4	<b>Module coordinator</b>	PD Dr.-Ing. Jürgen Seiler
5	<b>Contents</b>	<p>Das Modul "Transformationen in der Signalverarbeitung" behandelt mehrere verschiedene Transformationen, die im Rahmen der Signalverarbeitung Verwendung finden. Dabei werden zuerst die grundlegenden Konzepte von Transformationen diskutiert und die Vorteile die Transformationen mit sich bringen erläutert. Im Anschluss daran werden die grundlegenden Eigenschaften von Integraltransformationen betrachtet und die Laplace- und die Fourier-Transformation im Detail untersucht. Um auch zeitlich veränderliche Signale gut transformieren zu können werden danach die Kurzzeit-Fourier-Transformation und die Gabor-Transformation eingeführt. Im Anschluss daran erfolgt eine Betrachtung der Auswirkung der Abtastung auf transformierte Signale, bevor die z-Transformation als Transformation für diskrete Signale behandelt wird. Abschließend erfolgt die Betrachtung weiterer Transformationen für diskrete Signale wie der Diskreten Fourier-Transformation oder linearer Block-Transformationen. The module "Transforms in Signal Processing" covers several different transforms which are used in the field of signal processing. For this, first the basic concepts of transforms are discussed and the advantages which are offered by the different transforms are presented. Subsequent to this, fundamental properties of integral transforms are considered and the Laplace- and the Fourier-Transform are examined in detail. To be able to transform time-varying signals, the Short-Time Fourier-Transform and the Gabor-Transform are introduced, afterwards. Subsequent to this, the impact of sampling on transformed signals is analyzed before the z-Transform as a transform for discrete signals is covered. Finally, further transforms for discrete signals like the Discrete Fourier-Transform or Linear-Block Transforms are discussed.</p>
6	<b>Learning objectives and skills</b>	<p>Die Studierenden können nach Besuch der Vorlesung</p> <ul style="list-style-type: none"> <li>• Anwendungsmöglichkeiten von Transformationen bestimmen</li> <li>• Integraltransformationen gegenüberstellen und untersuchen</li> <li>• die Existenz von Transformationen hinterfragen</li> <li>• die Eindeutigkeit von Transformationen überprüfen</li> <li>• Sätze und Eigenschaften von Transformationen entwickeln</li> <li>• zu Transformationen zugehörige inverse Transformationen einschätzen</li> <li>• die Zusammenhänge zwischen verschiedenen Transformationen einschätzen</li> <li>• auf Zusammenhänge zwischen Ausgangssignalen und transformierten Signalen folgern</li> <li>• Symmetriebeziehungen von Transformationen ausarbeiten</li> </ul>

		<ul style="list-style-type: none"> <li>Zusammenhänge zwischen kontinuierlichen und diskreten Signalen ausarbeiten</li> </ul> <p>Educational Objectives and Competences: After attending the lecture, students will be able to</p> <ul style="list-style-type: none"> <li>determine applications of transforms</li> <li>contrast and examine integral transforms</li> <li>question the existence of transforms</li> <li>evaluate the uniqueness of transforms</li> <li>develop theorems and properties of transforms</li> <li>evaluate to transforms corresponding inverse transforms</li> <li>evaluate the relationships between different transforms</li> <li>asses the relationship between original signal and transformed signals</li> <li>devise the symmetry properties of transforms</li> <li>devise the relationship between continuous and discrete signals</li> </ul>
7	<b>Prerequisites</b>	None
8	<b>Integration in curriculum</b>	semester: 1
9	<b>Module compatibility</b>	Multimedia Engineering Master of Science Data Science 20212
10	<b>Method of examination</b>	mündlich Mündliche Prüfung von 30 min Dauer. *
11	<b>Grading procedure</b>	mündlich (100%)
12	<b>Module frequency</b>	Only in summer semester
13	<b>Workload in clock hours</b>	Contact hours: 30 h Independent study: 45 h

5	<b>Contents</b>	AI-based systems are increasingly complementing and replacing human cognition and appearing as agents in the world. They control processes, generate and filter knowledge, make judgments and decisions. The seminar deals with the question of how our security, our interests and our ethical values can be safeguarded in the process, especially against the background of limited explainability of deeply networked and self-learning systems.	
6	<b>Learning objectives and skills</b>	<p>Content specific: Participants</p> <ul style="list-style-type: none"> <li>• appreciate the disruptive potential of artificial agents on our lives and societies</li> <li>• develop a notion of the engineering, ethical, and philosophical challenges and their interdependencies</li> <li>• reflect various constructive approaches to trustworthiness along the whole system design/development value chain</li> </ul> <p>General: Participants</p> <ul style="list-style-type: none"> <li>• train the discourse of an interdisciplinary topic from different scientific perspectives</li> <li>• build up on their skills to comprehend a scientific argumentation, to present it convincingly to their peers, and to elaborate it stringently in a written paper</li> </ul>

5	<b>Contents</b>	<p>Datenbestände der Geisteswissenschaften werden dank graphischer Oberflächen, die die entstehenden hochdimensionalen Metadaten großer Bestände visualisieren können, aufbereitet. Die Visualisierungsstrategien der Informationswissenschaft und der Datenanalyse sollen ausführlich diskutiert und auf ihre wissenschaftliche Aussagekraft überprüft werden. Im Gegensatz zum manuellen Ansatz kann in diesem Fall mit einer signifikanten Verbesserung im Hinblick auf Schnelligkeit, Genauigkeit sowie Reproduzierbarkeit gerechnet werden. Die Visualisierung von Daten ist von unschätzbarem Wert zum eigenen Verständnis für Zusammenhänge in großen Datensätzen, und zum Aufbereiten der Informationen für Dritte.</p> <p>Das Auffinden von Tendenzen in Daten wird oftmals wesentlich beschleunigt oder erst möglich durch gezieltes Darstellen und Gegenüberstellen von Informationen.</p> <p>Die im Informatik-Modul erworbenen technischen Kompetenzen werden dazu in die Geisteswissenschaften übertragen und die erlernten Darstellungsmöglichkeiten werden in Bezug auf ihre Vor- und Nachteile für spezifische gegebene Datensätze evaluiert.</p>	
6	<b>Learning objectives and skills</b>	<p>Die Studierenden:</p> <ul style="list-style-type: none"> <li>• Analysieren die Struktur der Daten in Fallbeispielen und übertragen die erlernten Kompetenzen aus den Informationswissenschaften in die geisteswissenschaftlichen Themen.</li> <li>• Bewerten diverse technische Möglichkeiten zur Visualisierung von Daten hinsichtlich ihrer Anwendbarkeit für spezifische geisteswissenschaftliche Datensätze</li> <li>• Wenden unter impulsgebender Anleitung die erlernten Konzepte auf konkrete ausgewählte Anwendungsfälle an</li> <li>• Erkennen wesentliche Merkmale eines Datensatzes und stellen diese grafisch gegenüber</li> <li>• Unterscheiden zwischen der Visualisierung zu Publikationszwecken und der Exploration von Zusammenhängen zu Forschungszwecken</li> </ul>	

		<ul style="list-style-type: none"> <li>• Eröffnen sich im interdisziplinären Austausch Zugänge zu verwandten Disziplinen</li> <li>• Erlernen unterschiedliche Vorgehensweisen zur Markierung von Daten</li> <li>• Entwickeln Konzepte zur Darstellung von hochdimensionalen Metadaten</li> </ul> <p>Selbstkompetenz Die Studierenden</p> <ul style="list-style-type: none"> <li>• erweitern eigenständig den Umgang mit komplexen Anwendungen durch Eigenstudium.</li> <li>• überwachen eigenständig ihren Arbeitsfortschritt und die Einhaltung vorgegebener Termine.</li> <li>• festigen grundlegende Kompetenzen des Selbstmanagements und reflektieren den eigenen Lernprozess</li> </ul> <p>Sozialkompetenz Die Studierenden</p> <ul style="list-style-type: none"> <li>• tragen durch kritisches Feedback und Ergebnisdiskussion zum kooperativen und konstruktiven Arbeiten in der Gruppe bei.</li> <li>• verbessern die Diskussionskultur, indem sie auf hohem Niveau Inhalte und methodische Zugänge argumentativ vertreten.</li> <li>• erlernen den Umgang mit Kritik als Kritisierende und Kritisierte.</li> </ul>
7	<b>Prerequisites</b>	Multimedia- und objektorientierte Datenbanken (empfohlen) Teilnahme Daten erfassen in den DH (empfohlen) Informationsvisualisierung (parallel dazu empfohlen)
8	<b>Integration in curriculum</b>	no Integration in curriculum available!
